## HP HPE7-A06 Test Discount - HPE7-A06 Latest Dumps Pdf

The time and energy are all very important for the office workers. In order to get the HPE7-A06 certification with the less time and energy investment, you need a useful and valid HPE7-A06 study material for your preparation. HPE7-A06 free download pdf will be the right material you find. The comprehensive contents of HPE7-A06 practice torrent can satisfied your needs and help you solve the problem in the actual test easily. Now, choose our HPE7-A06 study practice, you will get high scores.

## HPE Campus Access Switching Expert Written Exam Sample Questions (Q91-Q96):

### NEW QUESTION # 91

Which commands will permit read-only access to a user with physical access to an AOS-CX switch?

- A.
- B.
- C.
- D.

**Answer: D**

**Explanation:**

To provide read-only access, the user must be assigned to the read-only group, not operators.

This ensures the user has local authentication and is restricted to read-only commands when accessing the switch console.

### NEW QUESTION # 92

Two CX 8325 switches are configured as a cluster using VSX for the core role and two CX 6300M in VSF for the aggregation role. When a minor software upgrade is issued on the switches, what is the method to achieve a hitless upgrade with the aggregation switches?

- A. ISSU update-software initiates the upgrade first on the secondary switch, followed by the primary.
- B. ISSU update-software initiates the upgrade first on the primary switch, followed, by the secondary.
- C. VSF update-software initiates the software upgrade first on the primary switch, followed by the secondary.
- **D. VSF update-software initiates the software upgrade first on the secondary switch, followed by the primary.**

**Answer: D**

Explanation:

For CX 6300M switches in a VSF (Virtual Switching Framework), the correct method for a hitless (non-disruptive) minor software upgrade is to use the vsf update-software command. The process always upgrades the secondary member first, then the primary, ensuring continuous forwarding and minimizing downtime.

### NEW QUESTION # 93

A customer is experiencing problems with BGP on their AOS-CX network. The users cannot access specific resources on the network, even though they have been assigned the appropriate roles and permissions.

What is the most likely cause of the problem?

- A. The HPE Aruba Networking ClearPass configuration is incorrect.
- B. The GBP database is corrupted.
- **C. The GBP tags are not being applied correctly to the user's traffic.**
- D. The users are not being assigned the correct GBP classes.

**Answer: C**

Explanation:

In AOS-CX, Group-Based Policy (GBP) relies on correct tagging of user traffic. If GBP tags are not applied properly, even users with the correct roles and permissions will not be able to access the intended network resources. This makes incorrect tag application the most likely cause of the BGP-related issue described.

### NEW QUESTION # 94

Refer to the exhibit.

Based on the screenshot, what is required to correct the state displayed in the exhibit?

- A. Use copy running-config vsx-peer on the secondary switch.
- B. Use the Enhanced Software Update process to correct the state.
- **C. Use the same OS-CX image on the secondary that is active on primary.**
- D. Use the force vsx-sync to start sync process.

**Answer: C**

Explanation:

The exhibit shows that the VSX config-sync is non-operational with the error state SW version mismatch. This occurs when the primary and secondary switches are running different ArubaOS- CX software versions. To correct this, both peers must run the same OS-CX image. The recommended remediation explicitly suggests running show images to confirm the software image and ensure the same version is loaded on both peers.

### NEW QUESTION # 95

You are configuring an HPE Aruba Networking gateway cluster with AOS-10. What is true about gateway functionality? (Choose two.)

- **A. PAPI traffic is traversing through an IPSEC tunnel.**

- B. AOS-10 only supports high-value client session synchronization for the first failover.
- C. Multiversioning between AP and gateways is not supported.
- D. LACP is not supported when manually provisioning gateways.
- E. User traffic in tunneled mode is encrypted per default.

**Answer: A,E**

Explanation:

PAPI traffic is traversing through an IPSEC tunnel → Correct. In AOS-10, AP-gateway control traffic (PAPI) is protected using IPsec.

User traffic in tunneled mode is encrypted per default → Correct. Client traffic sent in tunneled SSID mode is automatically encrypted over the AP-gateway tunnel.

## NEW QUESTION # 96

.....

The Dumpcollection recognizes that HP HPE7-A06 aspirants are constantly juggling multiple responsibilities, so questions are ideal for quick preparation. Applicants can access these questions anywhere and at any time, using any smart device, which allows them to learn at their own pace.
