

# Valid Plat-Admn-301 Test Pass4sure & Plat-Admn-301 Latest Test Questions

What's more, part of that Real4dumps Plat-Admn-301 dumps now are free: <https://drive.google.com/open?id=1Izg30w9j4LuCcUfMV-WcQN9CbNqr7M8>

Having been handling in this line for more than ten years, we can assure you that our Plat-Admn-301 study questions are of best quality and reasonable prices for your information. We offer free demos of the latest version covering all details of our Plat-Admn-301 Exam Braindumps available at present as representatives. So Plat-Admn-301 practice materials come within the scope of our business activities. Choose our Plat-Admn-301 learning guide, you won't regret!

## Salesforce Plat-Admn-301 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• <b>Auditing and Monitoring:</b> This section of the exam measures skills of a Salesforce Support Specialist and covers the tools used to monitor system behavior and review user activity. It includes understanding debug logs, setup audit trail, and methods for ensuring sensitive data is handled correctly in both production and sandbox environments. It also explains how to review and troubleshoot security settings, including recognizing pending updates that might affect system access.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>Objects and Applications:</b> This section of the exam measures the skills of a Salesforce Business Analyst and covers selecting appropriate object and application-level solutions to meet business needs. It focuses on identifying when to use master-detail relationships, lookups, junction objects, related lists, record types, Schema Builder, and Object Creator. The section also includes improving UI and user experience using App Manager, Lightning App Builder, Dynamic Forms, standard Lightning components, console apps, and tools like the Lightning page analyze button.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Data and Analytics Management:</b> This section of the exam measures skills of Salesforce Data Analyst and covers data quality assessment, data enrichment, and duplicate management. It explains how to choose appropriate reporting and analytics tools for advanced requirements, including custom report types, snapshots, formulas, joined reports, and dashboard configurations. It also covers methods for connecting external data sources using big objects, external objects, data warehouses, data lakes, and Salesforce Connect. Finally, it describes the suitable tools and methods for importing data, including Data Loader, Data Import Wizard, and external IDs.</li> </ul>

## Plat-Admn-301 Latest Test Questions | Plat-Admn-301 Latest Exam Duration

Perhaps you worry about the quality of our Plat-Admn-301 exam questions. We can make solemn commitment that our Plat-Admn-301 study materials have no mistakes. All contents are passing rigid inspection. You will never find small mistakes such as spelling mistakes and typographical errors in our Plat-Admn-301 learning guide. No one is willing to buy a defective product. And our Plat-Admn-301 practice braindumps are easy to understand for all the candidates.

### Salesforce Certified Platform Administrator II Sample Questions (Q91-Q96):

#### NEW QUESTION # 91

Ursa Major Solar's administrator has configured multiple record-triggered flows to run before or after the record is saved on the Account object.

What should the administrator consider when a record-triggered flow executes first?

- A. The order in which those flows are executed is not guaranteed.
- B. The flow with the longest execution time will execute first.
- C. The flow with the shortest execution time will execute first.
- D. Assign the highest priority to the record-triggered flow which should execute first.

**Answer: A**

Explanation:

The order in which record-triggered flows are executed is not guaranteed. If there are multiple record-triggered flows on the same object and trigger type, Salesforce does not guarantee which one runs first.

Therefore, the administrator should consider this when designing record-triggered flows that depend on each other's outcomes.

htm&type=5

#### NEW QUESTION # 92

Cloud Kicks users report receiving an "Apex CPU time limit exceeded" error message when attempting to close certain opportunity records. This does not occur on every opportunity record change or for every user.

What is the recommended method for the administrator to identify the cause?

- A. Set up Apex Exception Email alerts
- B. Monitor with Login Forensics.
- C. Enable Debug Logging for users.
- D. Review the Setup Audit Trail.

**Answer: C**

Explanation:

Debug logs capture database operations, system processes, and errors that occur when executing a transaction or running unit tests.

Debug logs can help identify the cause of Apex CPU time limit exceeded errors by showing the execution time of each Apex statement and trigger. References: [https://developer.salesforce.com](https://developer.salesforce.com/docs/atlas.en-us.apexcode.meta/apexcode/apex_debugging_debug_logs.htm)

#### NEW QUESTION # 93

How should an administrator support a finance team that is trying to use Opportunity data to keep an eye on their pipeline rather than manually calculating anticipated income for the quarter?

- A. Set up collaborative forecasting to view quota against the open pipeline.
- B. Run a report at the end of each quarter to update the finance team on pipeline status.
- C. Create a custom Forecasting object to inform the finance team on the status of deals.
- D. Show the finance team how to use the Opportunity Kanban List View.

**Answer: A**

Explanation:

To help the finance team use Opportunity data to keep an eye on their pipeline without manually calculating anticipated income for the quarter, the administrator should set up collaborative forecasting. Collaborative forecasting allows users to view quota against open pipeline and make adjustments based on changing business conditions. References: [https://help.salesforce.com/s/articleView?id=sf.forecasts3\\_overview.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.forecasts3_overview.htm&type=5)

#### NEW QUESTION # 94

Cloud Kicks wants its sales reps to always use the same full zip code format with a hyphen where applicable. What should the administrator implement to help ensure consistent formatting?

- A. Add a quick create function for the sales reps to use.
- B. Add a help text instructing the sales rep on how to enter this field.
- C. Edit the standard field length to five characters.
- **D. Create a REGEX function to use in a validation rule on the field.**

**Answer: D**

Explanation:

REGEX is a function that allows administrators to check whether a text value matches a regular expression pattern. Regular expressions are a way to define complex patterns of characters using symbols and operators. REGEX can be used to enforce consistent formatting for a field value by specifying the required length, characters, and separators.

#### NEW QUESTION # 95

A user at Universal Containers wants to load records into a custom object named Location from a .csv file. While using Data Loader, they cannot find the Location object. What are two reasons this is happening?

Choose 2 answers

- A. Data Loader should only be used with standard objects.
- **B. The label of Location may have been changed.**
- C. Location has a master-detail field to Account.
- **D. The user's profile needs create access to Location.**

**Answer: B,D**

Explanation:

Two reasons why the user cannot find the Location object while using Data Loader are:

\* The label of Location may have been changed. The label of an object is the name that is displayed in the user interface and can be different from the API name that is used by Data Loader and other tools. If the label of Location has been changed to something else, such as Site or Venue, then the user may not be able to find it by searching for Location in Data Loader. The user should check the API name of the object in Object Manager or use the Describe Global operation in Data Loader to see all available objects and their labels.

\* The user's profile needs create access to Location. The user's profile determines what objects and fields they can access and what actions they can perform on them, such as creating, reading, updating, or deleting records. If the user's profile does not have create access to Location, then they will not be able to load records into that object using Data Loader. The user should check their profile permissions in Setup or ask their administrator to grant them create access to Location.

The other two options are incorrect because:

\* Data Loader should only be used with standard objects is not a reason because Data Loader can be used with both standard and custom objects, as long as they are accessible and queryable via the API.

\* Location has a master-detail field to Account is not a reason because having a master-detail field does not prevent an object from being available in Data Loader, as long as it meets the other requirements such as accessibility and queryability.

#### NEW QUESTION # 96
