

# ISA-IEC-62443 Test Result, ISA-IEC-62443 Practice Mock

P.S. Free & New ISA-IEC-62443 dumps are available on Google Drive shared by GuideTorrent: <https://drive.google.com/open?id=1eckZAc2mdrUr7JvODbz-zuvWNL2t8W6>

From the time our company was just established until now, we have conducted multiple surveys of users. We also take every feedback from users very seriously. This is a very tedious job, but to better develop our ISA-IEC-62443 learning materials, our professional experts have been insisting on it! We hope to be responsible for every user of our ISA-IEC-62443 Exam Braindumps. Your praise is the driving force of our ISA-IEC-62443 practice questions!

ISA/IEC 62443 Cybersecurity Fundamentals Specialist (ISA-IEC-62443) practice test software is another great way to reduce your stress level when preparing for the ISA Exam Questions. With our software, you can practice your excellence and improve your competence on the ISA/IEC 62443 Cybersecurity Fundamentals Specialist (ISA-IEC-62443) exam dumps. Each ISA ISA-IEC-62443 practice exam, composed of numerous skills, can be measured by the same model used by real examiners.

## Achieve ISA ISA-IEC-62443 Certification Without Difficulty with the Help of GuideTorrent Exam Questions

If you want to be a leader in some industry, you have to continuously expand your knowledge resource. Our GuideTorrent always updates the exam dumps and the content of our exam software in order to ensure the ISA-IEC-62443 exam software that you have are the latest and comprehensive version. No matter which process you are preparing for ISA-IEC-62443 Exam, our exam software will be your best helper. As the collection and analysis of our ISA-IEC-62443 exam materials are finished by our experienced and capable IT elite.

## ISA/IEC 62443 Cybersecurity Fundamentals Specialist Sample Questions (Q149-Q154):

### NEW QUESTION # 149

Which of the following is a recommended default rule for IACS firewalls?

Available Choices (select all choices that are correct)

- **A. Block all traffic by default.**
- B. Allow IACS devices to access the Internet.
- C. Allow traffic directly from the IACS network to the enterprise network.
- D. Allow all traffic by default.

**Answer: A**

### NEW QUESTION # 150

Which of the following is an element of monitoring and improving a CSMS?

Available Choices (select all choices that are correct)

- A. Restricted access to the industrial control system to an as-needed basis
- B. Significant changes in identified risk round in periodic reassessments
- C. Review of system logs and other key data files
- D. Increase in staff training and security awareness

**Answer: C,D**

Explanation:

Monitoring and improving a Cybersecurity Management System (CSMS) as per ISA/IEC 62443 standards involves several key activities that ensure the system remains effective and responsive to emerging threats.

Two critical elements of this ongoing process are:

A). Increase in staff training and security awareness: Regular training and increasing security awareness among staff are vital to maintaining a secure operating environment. This proactive measure helps in reducing human error and enhancing the ability to respond effectively to cybersecurity incidents.

D). Review of system logs and other key data files: Continuous review and analysis of system logs and other relevant data files are essential for detecting, investigating, and responding to potential security incidents.

This monitoring helps in identifying anomalies that may indicate a security breach or operational issues needing attention.

### NEW QUESTION # 151

What is Modbus?

- A. A programming language
- B. A type of industrial machinery
- C. A network security standard
- D. A serial communications protocol

**Answer: D**

Explanation:

Modbus is defined as a serial communication protocol widely used in industrial environments to enable communication among devices such as PLCs, sensors, and actuators.

From ISA/IEC 62443-1-1 (Terminology, Concepts, and Models), Modbus is mentioned in the context of communication protocols:

"Many IACS use legacy communication protocols (e.g., Modbus, DNP3) that were not originally designed with cybersecurity in mind." Modbus was developed in 1979 by Modicon and operates over serial lines (RS-232, RS-485) or over Ethernet as Modbus TCP/IP. It follows a master/slave or client/server architecture.

Incorrect Options:

A). A programming language - Modbus is not a language; it's a protocol.

B). A network security standard - It lacks built-in security; it is a communication protocol, not a security standard.

C). A type of industrial machinery - It facilitates communication between machinery, but is not machinery itself.

### NEW QUESTION # 152

Which statement BEST describes the enforceability of standards?

- A. Courts never consider standards when determining liability.
- B. Standards have criminal penalties for non-compliance.
- C. Compliance with standards is voluntary.
- D. Standards are always legally binding and must be followed.

**Answer: C**

Explanation:

Standards like ISA/IEC 62443 are generally voluntary unless they are incorporated into law, regulation, or contractual obligation.

However, they can be used in legal proceedings to determine whether an organization met its duty of care.

"Compliance with standards is generally voluntary, but standards may become mandatory if referenced in laws, regulations, or contracts. Courts may consider them in liability cases."

- ISA/IEC 62443-1-1:2007 - Clause 5.3 - Relationship to Regulatory Requirements Therefore, while not automatically legally binding, standards can have significant regulatory and legal influence.

### NEW QUESTION # 153

What is TRUE regarding safety systems?

- A. No dedicated malware has been found targeting safety systems specifically.
- B. By integrating control and safety systems via Modbus TCP, cybersecurity risks are at a tolerable level.
- **C. Even the most modern and sophisticated safety systems can be defeated by an attacker.**
- D. Safety systems are an independent protection layer and as such have no cybersecurity vulnerabilities.

**Answer: C**

Explanation:

Even the most modern and sophisticated safety systems can be defeated by an attacker. This statement is validated by the discovery of malware specifically targeting safety instrumented systems (SIS), such as the

"Triton/Trisis" malware that compromised the SIS of a petrochemical plant. Safety systems, while designed as independent protection layers, are not immune to cybersecurity vulnerabilities and require specific countermeasures. Integration, such as using Modbus TCP, does not inherently reduce risk to a tolerable level without additional controls.

### NEW QUESTION # 154

.....

GuideTorrent ISA/IEC 62443 Cybersecurity Fundamentals Specialist (ISA-IEC-62443) practice test software is the answer if you want to score higher in the ISA/IEC 62443 Cybersecurity Fundamentals Specialist (ISA-IEC-62443) exam and achieve your academic goals. Don't let the ISA-IEC-62443 certification exam stress you out! Prepare with our ISA-IEC-62443 exam dumps and boost your confidence in the ISA/IEC 62443 Cybersecurity Fundamentals Specialist (ISA-IEC-62443) exam. We guarantee your road toward success by helping you prepare for the ISA/IEC 62443 Cybersecurity Fundamentals Specialist (ISA-IEC-62443) certification exam. Use the best GuideTorrent ISA ISA-IEC-62443 practice questions to pass your ISA/IEC 62443 Cybersecurity Fundamentals Specialist (ISA-IEC-62443) exam with flying colors!
