Analytics-DA-201 Practice Exams Free - Test Analytics-DA-201 Collection Pdf

To help candidate breeze through their exam easily, Pass4sures develop Salesforce Analytics-DA-201 Exam Questions based on real exam syllabus for your ease. While preparing for the Analytics-DA-201 exam candidates suffer a lot in the search for the preparation material. If you prepare with Salesforce Analytics-DA-201 Exam study material you do not need to prepare anything else. Our experts have prepared Salesforce Analytics-DA-201 dumps questions that cancel out your chances of exam failure.

Salesforce Certified Tableau Data Analyst Sample Questions (Q40-Q45):

NEW QUESTION # 40

You have a line chart on a worksheet.

You want to add a comment to March 2020 as shown in the following visualization.

What should you do?

- A. Enable captions
- **B. Annotate March 2020**
- C. Drag the growth rate to Text on the Marks card
- D. Add a tooltip

Answer: B

Explanation:

To add a comment to March 2020 on a line chart, you need to annotate that mark. You can right-click on the mark and select Annotate > Mark from the menu. This will open a dialog box where you can type your comment and format it as you like. You can also drag and drop the annotation to position it on the worksheet.

Dragging the growth rate to Text on the Marks card will add a label to every mark on the line chart, enabling captions will show a description of the worksheet at the bottom, and adding a tooltip will show a text box when users hover over a mark. References:

https://help.tableau.com/current/pro/desktop/en-us/formatting_annotations.htm https://help.tableau.com/current/pro/desktop/en-us/formatting_annotations_create.htm

To add a comment to a specific point on a line chart, such as March 2020 in the provided visualization, you would use the 'Annotate' feature. Right-clicking on the data point for March 2020 and selecting 'Annotate' allows you to add a text annotation directly to the chart, which can be used to highlight and comment on that particular data point.

NEW QUESTION # 41

You have the following chart that shows the cumulative of sales from various dates.

You want the months to appear as shown in the following chart.

What should you do?

- A. Select Show Missing Values for the date
- **B. Convert the date to Exact Date**
- C. Convert the date to Attribute
- D. Convert the date to Continuous

Answer: B

Explanation:

References: <https://help.tableau.com/current/pro/desktop/en-us/dates.htm> <https://help.tableau.com/current/pro>

/desktop/en-us/dates_continuous.htm <https://help.tableau.com/current/pro/desktop/en-us/formatting.htm> To ensure the dates are shown in a continuous axis, you should convert the date to a continuous field. This will display the months in a sequence without any breaks, which is needed for showing a trend over time like the cumulative sum of sales.

NEW QUESTION # 42

You have a data source that contains data for every city in the United States. The following is a sample of the data. You need to use the City dimension to create a dynamic filter that shows the cities that have a population greater than one million. Which type of filter should you use?

- A. Wildcard filter
- B. General filter
- C. Condition filter
- D. Top filter

Answer: C

Explanation:

To use the City dimension to create a dynamic filter that shows the cities that have a population greater than one million, you should use a condition filter. A condition filter is a type of filter that shows only the values that meet a specified condition based on a measure or a calculation. You can create a condition filter by dragging a dimension to the Filters shelf and selecting Condition from the dialog box. Then you can enter a formula or choose an option that defines your condition.

In this case, you want to create a condition filter based on Population, which is a measure. You can drag City to the Filters shelf and select Condition from the dialog box. Then you can choose By field from the tab and select Population > Sum > Greater than > 1000000 from the drop-down lists. This will create a condition filter that shows only the cities that have a sum of population greater than one million.

The other options are not correct for this scenario. A general filter is not a specific type of filter, but a term that refers to any type of filter in Tableau. A wildcard filter is a type of filter that shows only the values that match a specified pattern or string, such as "New*" or "*ton". A top filter is a type of filter that shows only the top or bottom N values of a measure or dimension based on a ranking or an aggregation. References:

NEW QUESTION # 43

You have a dashboard that contains two sheets named Sheet 1 and Sheet 2.

You want to add an object to the dashboard that users can click to switch to a different dashboard in the workbook.

Which object should you add to the dashboard?

Answer:

Explanation:

Explanation:

The object that you should add to the dashboard to allow users to switch to a different dashboard in the workbook is Navigation. Navigation objects are used to create links between dashboards or sheets in a workbook. You can add a navigation object to a dashboard by dragging it from the list of objects and dropping it on the dashboard. You can then configure the navigation object to specify the destination dashboard or sheet that you want users to navigate to when they click on it.

You can learn more about navigation objects and how to use them in this article: https://help.tableau.com/current/pro/desktop/en-us/dashboards_navigation.htm

NEW QUESTION # 44

You have a table that contains the following data.

How should you complete the formula? (Drag the appropriate Options to the Answer Area and drop into the correct locations.)

Answer:

Explanation:

Explanation:
