## 最新的 Oracle Cloud Infrastructure 1Z0-1085-25 免費考試真題 (Q43-Q48):

### 問題 #43

Why are availability domains within the same OCI region connected by a low-latency, high-bandwidth network?

- A. To increase the likelihood of simultaneous failures
- B. To ensure all domains share the same infrastructure
- C. To allow for high-availability connectivity and building replicated systems
- D. To reduce the need for encryption between domains

答案: C

解題說明:

The main purpose of connecting availability domains with a low-latency, high-bandwidth network is to enable high-availability connectivity and facilitate the building of replicated systems. This network infrastructure allows for seamless communication between domains, supporting the creation of redundant and resilient systems for increased reliability.

### 問題 #44

What is a key advantage of using virtual nodes in an Oracle Container Engine for Kubernetes cluster?

- A. They allow for a serverless Kubernetes experience, reducing operational overhead.
- B. They can only be used in basic clusters.
- C. They require manual upgrades of the data plane infrastructure.
- D. They provide more configuration flexibility as compared to managed nodes.

答案: A

解題說明:

Virtual nodes abstract away the underlying infrastructure management, providing a serverless Kubernetes experience that reduces the operational burden on users.

### 問題 #45

What is the advantage of storing secrets in a vault in Oracle Cloud Infrastructure?

- A. It eliminates the need for authentication tokens.
- B. It provides greater security than storing them in code or configuration files.
- C. It makes secrets easier to access in code.
- D. It automatically generates new secrets.

答案: B

解題說明:

Storing secrets in a vault provides greater security compared to storing them in code or configuration files. Vaults offer encryption, access controls, audit trails, and other security features to protect sensitive information from unauthorized access or exposure.

### 問題 #46
