

# Free PDF 2026 Professional Nutanix NCP-CI-Azure Reliable Exam Registration

What's more, part of that PremiumVCEDump NCP-CI-Azure dumps now are free: [https://drive.google.com/open?id=1Ot\\_3BNew4lgJFxbZN7nHEU5IdAbLNyrJ](https://drive.google.com/open?id=1Ot_3BNew4lgJFxbZN7nHEU5IdAbLNyrJ)

Before clients purchase our NCP-CI-Azure test torrent they can download and try out our product freely to see if it is worthy to buy our NCP-CI-Azure exam questions. You can visit the pages of our NCP-CI-Azure training guide on the website which provides the demo of our NCP-CI-Azure study torrent and you can see parts of the titles and the form of our software. IF you have any question about our NCP-CI-Azure Exam Questions, there are the methods to contact us, the evaluations of the client on our NCP-CI-Azure practice guide, the related exams and other information about our NCP-CI-Azure test torrent.

## Nutanix NCP-CI-Azure Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• <b>Planning an NC2 on Azure Deployment:</b> This section of the exam measures the skills of IT Administrators and covers the preparation of the Azure cloud environment, including determining the appropriate Azure account and node types. It also involves subscribing to the NC2 service, which requires knowledge of authentication methods and organization naming conventions. Additionally, candidates must determine implementation requirements by evaluating deployment use cases and redundancy needs. Identifying networking requirements is crucial, focusing on connectivity options like VPN and CIDR ranges.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• <b>Configuring an NC2 on Azure Environment:</b> This section evaluates the skills of IT Administrators and emphasizes modifying cloud networking security to protect resources. Candidates will configure Nutanix networking settings and troubleshoot connectivity issues to ensure seamless communication within the cloud environment.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• <b>Managing an NC2 on Azure Environment:</b> This section relates to skills in identifying management tasks for nodes and clusters. Candidates will monitor cluster health and cloud resource performance, ensuring that all components function efficiently. Understanding these management tasks is vital for maintaining operational integrity in a hybrid cloud environment.</li></ul>

Topic 4	<ul style="list-style-type: none"> <li>• Deploying an NC2 on Azure Environment: This section assesses the skills of Nutanix Cloud Operators and focuses on deploying the cloud cluster within the Azure environment. Candidates will learn to configure cloud provider networking effectively, ensuring that all necessary resources are correctly set up for deployment.</li> </ul>

## NCP-CI-Azure Certification Training | NCP-CI-Azure Updated CBT

As what have been demonstrated in the records concerning the pass rate of our NCP-CI-Azure free demo, our pass rate has kept the historical record of 98% to 99% from the very beginning of their foundation. During these years, our PDF version of our NCP-CI-Azure study engine stays true to its original purpose to pursue a higher pass rate that has never been attained in the past. And you will be content about our considerate service on our NCP-CI-Azure training guide. If you have any question, you can just contact us!

### Nutanix Certified Professional - Cloud Integration - Azure (NCP-CI-Azure v6.7) Sample Questions (Q35-Q40):

#### NEW QUESTION # 35

Exhibit.

Which action should the administrator take to troubleshoot the error shown in the exhibit?

- A. Check the Azure AD App registration Client Secret.
- B. Check the NC2 organization permissions.
- C. Check the Azure subnet delegation status.
- D. Check the PC VNet is peered correctly.

**Answer: A**

Explanation:

To troubleshoot the error shown in the exhibit where Azure credentials are not valid and the creation of the resource group failed, the administrator should:

Verify that the Azure AD App registration has been correctly configured, especially the Client Secret.

Ensure that the Client Secret is valid, has not expired, and matches what has been entered in the configuration.

This step is crucial because an invalid or expired Client Secret would prevent the validation of Azure credentials and the creation of necessary resources.

#### NEW QUESTION # 36

An administrator needs the permission to create and manage multiple organizations and clusters in NC2, as well as manage user access for the entire company.

What role should be assigned to meet the minimum requirements of this task?

- A. Customer Security Administrator
- B. Organization Administrator
- C. Cluster Administrator
- D. Customer Administrator

**Answer: D**

Explanation:

Role Requirements: The task involves creating and managing multiple organizations and clusters, along with managing user access across the company.

Role Capabilities: The "Customer Administrator" role is designed to provide extensive administrative capabilities, including:

Creating and managing organizations.

Managing clusters.

Handling user access and permissions.

Comparison of Roles:

Cluster Administrator: Primarily focuses on managing individual clusters but does not encompass organization-wide administrative tasks.

Customer Security Administrator: Focuses on security-related tasks and does not have broad administrative capabilities across organizations and clusters.

Organization Administrator: Manages organizational settings but might not cover all aspects needed for multiple clusters and user access management.

Conclusion: The "Customer Administrator" role meets all the requirements for managing organizations, clusters, and user access comprehensively.

### NEW QUESTION # 37

An administrator is tasked with creating a new subnet for a group of VMs that require inbound internet access.

Internal private addresses must be obscured to servers on the public internet.

Which network is best suited for satisfying this requirement?

- A. No-NAT based network
- **B. NAT based network**
- C. Layer 2 Stretch network
- D. Bastion based network

**Answer: B**

Explanation:

\* NAT Based Network: A NAT-based network is designed to provide inbound and outbound internet access while obscuring the internal private addresses. This setup uses Network Address Translation (NAT) to map internal IP addresses to a public IP address, ensuring that internal addresses are not exposed to the public internet.

\* Security and Connectivity: NAT provides a layer of security by hiding internal IP addresses and allowing controlled access to external resources. This configuration is well-suited for VMs that need to communicate with servers on the public internet while maintaining the privacy of their internal network addresses.

### NEW QUESTION # 38

An administrator is tasked with creating a new subnet for a group of VMs that require inbound internet access. Internal private addresses must be obscured to servers on the public internet.

Which network is best suited for satisfying this requirement?

- A. No-NAT based network
- **B. NAT based network**
- C. Layer 2 Stretch network
- D. Bastion based network

**Answer: B**

Explanation:

NAT Based Network: A NAT-based network is designed to provide inbound and outbound internet access while obscuring the internal private addresses. This setup uses Network Address Translation (NAT) to map internal IP addresses to a public IP address, ensuring that internal addresses are not exposed to the public internet.

Security and Connectivity: NAT provides a layer of security by hiding internal IP addresses and allowing controlled access to external resources. This configuration is well-suited for VMs that need to communicate with servers on the public internet while maintaining the privacy of their internal network addresses.

### NEW QUESTION # 39

An administrator needs to open the following ports in the firewall between an on-premises cluster and azure for disaster recovery:

- \* 22
- \* 2009
- \* 2020
- \* 2049
- \* 3260
- \* 9440

Which rule-type should be created on the firewall for communication to be appropriately established?

- A. Outbound (ICMP)
- B. Bi-directional (ICMP)
- C. Bi-directional (TCP)
- D. Outbound (TCP)

**Answer: C**

Explanation:

Port Requirements: The specified ports (22, 2009, 2020, 2049, 3260, 9440) are commonly used for various services and require TCP communication.

Port 22: SSH

Port 2009: Used for Nutanix internal communication

Port 2020: Nutanix services

Port 2049: NFS

Port 3260: iSCSI

Port 9440: Nutanix Prism management

Communication Type: To ensure proper disaster recovery setup, bi-directional communication is needed to allow traffic to flow both from on-premises to Azure and vice versa.

TCP Protocol: These ports use the TCP protocol, which provides reliable communication between devices.

Conclusion: Creating a bi-directional (TCP) rule on the firewall allows the necessary communication for disaster recovery processes.
