

有効的なDP-600ミシユレーション問題を信頼することは、Implementing Analytics Solutions Using Microsoft Fabricに合格するための最初のステップです

無料でクラウドストレージから最新のJapancert DP-600 PDFダンプをダウンロードする：<https://drive.google.com/open?id=1Z6-L3I5364VDTQUu7zKZ3GVeNxaKg3ov>

JapancertのMicrosoftのDP-600試験のトレーニングキットはJapancertのIT技術専門家たちによって開発されたのです。そのデザインは当面の急速に変化するIT市場と密接な関係があります。Japancertのトレーニングはあなたを助けて継続的に発展している技術を利用して、問題を解決する能力を高めると同時に仕事についての満足度を向上させることができます。JapancertのMicrosoftのDP-600の認証したカバー率は100パーセントに達したのですから、弊社の問題と解答を利用する限り、あなたがきつと気楽に試験に合格することを保証します。

MicrosoftのDP-600認定試験を一回合格するためには必ず良い準備しなければなりません。完全な知識がこの高度専門の試験に合格するのは必要でJapancertは君にこれらの資源を完全な需要に備わっています。

DP-600勉強の資料、DP-600絶対合格

弊社は多くの受験者たちの愛用するソフト版とオンライン版を提供しています。DP-600問題集のソフト版はオンライン版の内容と同じで、真実の試験の雰囲気を感じることができます。ソフト版は復習のパソコンで実行することができます、windowsのみで使用することができます。DP-600問題集のオンライン版はWindows/Mac/Android/iOS対応です。みんなはソフト版とオンラインでDP-600問題を繰り返して操作することができます。

Microsoft DP-600 認定試験の出題範囲：

トピック	出題範囲
トピック 1	<ul style="list-style-type: none">• Maintain a data analytics solution: This section of the exam measures the skills of administrators and covers tasks related to enforcing security and managing the Power BI environment. It involves setting up access controls at both workspace and item levels, ensuring appropriate permissions for users and groups. Row-level, column-level, object-level, and file-level access controls are also included, alongside the application of sensitivity labels to classify data securely. This section also tests the ability to endorse Power BI items for organizational use and oversee the complete development lifecycle of analytics assets by configuring version control, managing Power BI Desktop projects, setting up deployment pipelines, assessing downstream impacts from various data assets, and handling semantic model deployments using XMLA endpoint. Reusable asset management is also a part of this domain.

トピック 2	<ul style="list-style-type: none"> • Implement and manage semantic models: This section of the exam measures the skills of architects and focuses on designing and optimizing semantic models to support enterprise-scale analytics. It evaluates understanding of storage modes and implementing star schemas and complex relationships, such as bridge tables and many-to-many joins. Architects must write DAX-based calculations using variables, iterators, and filtering techniques. The use of calculation groups, dynamic format strings, and field parameters is included. The section also includes configuring large semantic models and designing composite models. For optimization, candidates are expected to improve report visual and DAX performance, configure Direct Lake behaviors, and implement incremental refresh strategies effectively.
トピック 3	<ul style="list-style-type: none"> • Prepare data: This section of the exam measures the skills of engineers and covers essential data preparation tasks. It includes establishing data connections and discovering sources through tools like the OneLake data hub and the real-time hub. Candidates must demonstrate knowledge of selecting the appropriate storage type—lakehouse, warehouse, or eventhouse—depending on the use case. It also includes implementing OneLake integrations with Eventhouse and semantic models. The transformation part involves creating views, stored procedures, and functions, as well as enriching, merging, denormalizing, and aggregating data. Engineers are also expected to handle data quality issues like duplicates, missing values, and nulls, along with converting data types and filtering. Furthermore, querying and analyzing data using tools like SQL, KQL, and the Visual Query Editor is tested in this domain.

Microsoft Implementing Analytics Solutions Using Microsoft Fabric 認定 DP-600 試験問題 (Q79-Q84):

質問 # 79

You have a Fabric tenant that contains a warehouse.

Several times a day, the performance of all warehouse queries degrades. You suspect that Fabric is throttling the compute used by the warehouse.

What should you use to identify whether throttling is occurring?

- A. the Monitoring hub
- **B. the Microsoft Fabric Capacity Metrics app**
- C. the Capacity settings
- D. dynamic management views (DMVs)

正解: B

解説:

To identify whether throttling is occurring, you should use the Monitoring hub (B). This provides a centralized place where you can monitor and manage the health, performance, and reliability of your data estate, and see if the compute resources are being throttled. References = The use of the Monitoring hub for performance management and troubleshooting is detailed in the Azure Synapse Analytics documentation.

質問 # 80

You have a Fabric tenant that contains a new semantic model in OneLake.

You use a Fabric notebook to read the data into a Spark DataFrame.

You need to evaluate the data to calculate the min, max, mean, and standard deviation values for all the string and numeric columns.

Solution: You use the following PySpark expression:

```
df.explain()
```

Does this meet the goal?

- **A. No**
- B. Yes

正解: A

解説:

The `df.explain()` method does not meet the goal of evaluating data to calculate statistical functions. It is used to display the physical plan that Spark will execute. References = The correct usage of the `explain()` function can be found in the PySpark documentation.

質問 # 81

Hotspot Question

You have a Fabric lakehouse named Lakehouse1 that contains the following data.

Table name	Column name	Data type
dbo.publicholidays	countryOrRegion	Varchar(8000)
dbo.publicholidays	holidayName	Varchar(8000)
dbo.publicholidays	Date	Date
dbo.sales	OrderDate	Date
dbo.sales	Quantity	Float
dbo.sales	UnitPrice	Float

You need build a T-SQL statement that will return the total sales amount by OrderDate only for the days that are holidays in Australia. The total sales amount must sum the quantity multiplied by the price on each row in the dbo.sales table.

How should you complete the statement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Microsoft

```
SELECT s.OrderDate,
```

AS TotalSalesAmt

- s.Quantity * S.UnitPrice
- Sum(s.Quantity * s.UnitPrice)
- Sum(s.quantity) * s.UnitPrice
- Sum(s.Quantity) * Sum(s.UnitPrice)

```
FROM [Lakehouse1].[dbo].[sales] AS s
```

JOIN [Lakehouse1].[dbo].[publicholidays] AS ph ON s.OrderDate = ph.date

- Cross
- Full outer
- Inner
- Right outer

```
WHERE ph.countryOrRegion = 'Australia'
```

```
GROUP BY s.OrderDate
```

正解:

解説:

Microsoft

```
SELECT s.OrderDate,
```

AS TotalSalesAmt

s.Quantity * S.UnitPrice
Sum(s.Quantity * s.UnitPrice)
Sum(s.quantity) * s.UnitPrice
Sum(s.Quantity) * Sum(s.UnitPrice)

```
FROM [Lakehouse1].[dbo].[sales] AS s
```

```
JOIN [Lakehouse1].[dbo].[publicholidays] AS ph ON s.OrderDate = ph.date
```

Cross
Full outer
Inner
Right outer

```
WHERE ph.countryOrRegion = 'Australia'
```

```
GROUP BY s.OrderDate
```

質問 # 82

What should you recommend using to ingest the customer data into the data store in the AnalyticsPOC workspace?

- A. a dataflow
- B. a stored procedure
- C. a pipeline that contains a KQL activity
- D. a Spark notebook

正解: A

解説:

For ingesting customer data into the data store in the AnalyticsPOC workspace, a dataflow (D) should be recommended. Dataflows are designed within the Power BI service to ingest, cleanse, transform, and load data into the Power BI environment. They allow for the low-code ingestion and transformation of data as needed by Litware's technical requirements. Reference = You can learn more about dataflows and their use in Power BI environments in Microsoft's Power BI documentation.

質問 # 83

You have an Azure Data Lake Storage Gen2 account named storage1 that contains a Parquet file named sales.parquet.

You have a Fabric tenant that contains a workspace named Workspace1.

Using a notebook in Workspace1, you need to load the content of the file to the default lakehouse. The solution must ensure that the content will display automatically as a table named Sales in Lakehouse explorer.

How should you complete the code? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

```
df = spark.read.parquet("abfss://fs1@storage1.dfs.core.windows.net/files/sales.parquet")
df.write.mode("overwrite").format("delta").saveAsTable("files/sales")
```

delta
csv
delta
parquet

files/sales
sales
files/sales
tables/sales

正解:

解説:

```
df = spark.read.parquet("abfss://fs1@storage1.dfs.core.windows.net/files/sales.parquet")
df.write.mode("overwrite").format("delta").saveAsTable("files/sales")
```

Explanation:

```
df = spark.read.parquet("abfss://fs1@storage1.dfs.core.windows.net/files/sales.parquet")
df.write.mode("overwrite").format("delta").saveAsTable("files/sales")
```
