PSPO I Exam Simulation

exam simulation, Product Owner, PSPO I, Scrum

The Professional Scrum Product Owner™ certification is a product of Scrum.org (PSPO I). The open assessments on their [website \(https://www.scrum.org/open-assessments\)](https://www.scrum.org/open-assessments) are quite good – just the number of questions is small. Practising with additional reliable tests before sitting for the real exam is highly recommended. The PSPO I Exam Simulation is an ideal tool for this. All Scrum questions reflect the latest Scrum Guide (2020).

A pool of more than 100 Scrum test questions!

This PSPO I exam simulation test works from a pool of questions. A product owner must have a strong knowledge of the Scrum Guide with special attention to the responsibilities of the Product Owner. It is not enough to learn the Scrum Guide, one must understand the context of Scrum: metrics, agile techniques, practices.

Professional Scrum Product Owner™ I Practice Test

The test is free. No sign-up required. No re-take limit applies.
The correct answers are explained at the end of the test.

Recommended reading: apart from the Scrum Guide and the Evidence Based Management Guide, the [PSPO Extra Curriculum \(https://www.scrum.org/extra-curriculum/\)](https://www.scrum.org/extra-curriculum/pspo-extra-simulation/) and [Scrum: The Guide Explained \(https://www.scrum.org/the-guide-explained/\)](https://www.scrum.org/the-guide-explained/) (not the intro page but the commentaries).

Disclaimer: this is a third-party practice test, created independently from **Scrum.org** (the provider of **Professional Scrum Product Owner™** certification). The questions are different from real exam questions however, similar in nature, difficulty and number.

So we can say that with Professional Scrum Product Owner I PSPO-I certificate you can not only validate your expertise but also put your career on the right track.

Scrum Professional Scrum Product Owner I Sample Questions (Q36-Q41):

NEW QUESTION # 36

Scrum is based on empiricism. All of its artifacts must be transparent to ensure sufficient accuracy of inspection. How can the Scrum Team maintain the Product Backlog to maximize its transparency?

(choose the best answer)

- A. Product Backlog items must be sized such that the highest ordered items are no bigger than a Sprint.
- **B. The Product Backlog is continually kept up to date with the most recent insights.**
- C. The Product Backlog is only updated at the Sprint Review, when both the Scrum Team and the stakeholders are available.
- D. Product Backlog items should hold no more than 8 points of work, which is the average in the range of acceptable sizes of 1, 2, 3, 5, 8, and 13.
- E. The Product Backlog is only updated at a release planning meeting with the stakeholders and the change control board present.

Answer: B

Explanation:

Explanation

The Scrum Team can maintain the Product Backlog to maximize its transparency by continually keeping it up to date with the most recent insights because:

It reflects the current state of the product and the work. The Product Backlog is a dynamic and emergent artifact that represents all the possible features, functions, requirements, enhancements, and fixes that constitute changes to the product. By updating it frequently, the Scrum Team can ensure that the Product Backlog is accurate, complete, and relevant.

It enables the Product Owner to optimize the value of the product and the work of the Scrum Team. The Product Owner is accountable for effective Product Backlog management, which includes ordering, refining, and communicating the Product Backlog items. By updating it frequently, the Product Owner can incorporate new learnings, feedback, opportunities, and changes into the product decisions and priorities.

It supports the inspection and adaptation of the Scrum Team and the stakeholders. The Product Backlog is a source of information and transparency for everyone involved in the product development. By updating it frequently, the Scrum Team and the stakeholders can inspect the progress and outcomes of each Sprint, and adapt their plans and actions accordingly.

References:

Scrum Guide 2020, page 10: "The Product Backlog is an emergent, ordered list of what is needed to improve the product." Scrum Guide 2020, page 11: "The Product Owner is accountable for effective Product Backlog management, which includes ... ensuring that the Product Backlog is transparent, visible and understood." Scrum Guide 2020, page 11: "The ordering of the items in the Product Backlog is the sole responsibility of the Product Owner. They order Product Backlog items to best achieve goals and missions." Scrum Guide 2020, page 11: "Higher ordered Product Backlog items are clearer and more refined than lower ordered ones." Scrum Guide 2020, page 15: "The Sprint Review is an informal meeting, not a status meeting, and the presentation of the Increment is intended to elicit feedback and foster collaboration."

NEW QUESTION # 37

Who determines when it is appropriate to update the Sprint Backlog during a Sprint?

(choose the best answer)

- A. The Project Manager.
- **B. The Developers.**
- C. The Scrum Team.
- D. The Product Owner.

Answer: B

Explanation:

* The Sprint Backlog is the set of Product Backlog items selected for the Sprint, plus a plan for delivering the product Increment and realizing the Sprint Goal. The Sprint Backlog is a highly visible, real-time picture of the work that the Developers plan to accomplish during the Sprint, and it belongs solely to the Developers.

* The Developers are accountable for creating a "Done" Increment that meets the Definition of Done each Sprint. The Developers are responsible for planning and executing the Sprint Backlog, designing and building the product functionality, testing and improving the product quality, and delivering a potentially releasable Increment. The Developers work closely with the Product Owner to understand and clarify the Product Backlog items, provide feedback and estimates, and suggest improvements and innovations.

* The Developers are also responsible for updating the Sprint Backlog throughout the Sprint. The Sprint Backlog is a plan with enough detail that changes in progress can be understood in the Daily Scrum.

The Developers modify the Sprint Backlog throughout the Sprint, and the Sprint Backlog emerges during the Sprint. This emergence

occurs as the Developers work through the plan and learn more about the work needed to achieve the Sprint Goal.

* As new work is required, the Developers add it to the Sprint Backlog. As work is performed or completed, the estimated remaining work is updated. When elements of the plan are deemed unnecessary, they are removed. Only the Developers can change its content and order during a Sprint.

NEW QUESTION # 38

Why does the Product Owner want the Developers to adhere to its Definition of Done?

(choose the best answer)

- **A. To have complete transparency into what has been done at the end of each Sprint.**
- B. To be able to reprimand the team when they do not meet their velocity goal for the Sprint.
- C. To know what the team will deliver over the next three Sprints.
- D. To predict the team's productivity over time.

Answer: A

Explanation:

Explanation

The Product Owner wants the Developers to adhere to its Definition of Done to have complete transparency into what has been done at the end of each Sprint. This is because:

* The Definition of Done is a formal description of the state of the Increment when it meets the quality measures required for the product. It is a shared understanding among the Scrum Team and the stakeholders of what "Done" means for any Product Backlog item that is selected for a Sprint.

* The Developers are accountable for creating a "Done" Increment in every Sprint. They must ensure that every Product Backlog item they work on meets the Definition of Done before it is considered complete.

* The Product Owner is accountable for maximizing the value of the product resulting from the work of the Scrum Team. They must inspect the Increment at the end of each Sprint and assess how it delivers value and contributes to the Product Goal.

* Having a clear and consistent Definition of Done helps the Product Owner have complete transparency into what has been done at the end of each Sprint. It also helps them make informed decisions about releasing, adapting, or continuing the product development. Other options, such as predicting the team's productivity over time, knowing what the team will deliver over the next three Sprints, or reprimanding the team when they do not meet their velocity goal for the Sprint, are not valid reasons for wanting the Developers to adhere to its Definition of Done. They may reflect a misunderstanding of what a Definition of Done is or how Scrum works.

NEW QUESTION # 39

Which two ways of creating Scrum Teams are consistent with Scrum's values?

(choose the best two answers)

- **A. Bring all the people together and let them organize into Scrum Teams.**
- B. The Chief Product Owner determines the new team structures and assignments.
- C. Managers personally re-assign current subordinates to new teams.
- **D. Existing teams propose how they would like to go about organizing into the new structure.**
- E. Managers collaborate to assign individuals to specific teams.

Answer: A,D

Explanation:

Explanation

The Scrum values are commitment, focus, openness, respect, and courage¹. These values are embodied by the Scrum Team, which is a self-managing unit that organizes its own work and delivers a valuable product². The Scrum Team consists of one Scrum Master, one Product Owner, and Developers³[3]. The best way to create Scrum Teams is to respect the self-management and empowerment of the people who will do the work, and let them decide how to organize themselves into Scrum Teams. This can be

done by bringing all the people together and letting them form Scrum Teams based on their skills, interests, and alignment with the product vision⁴. Alternatively, existing teams can propose how they would like to reorganize themselves into Scrum Teams, based on their feedback and experience⁵. These ways of creating Scrum Teams are consistent with the Scrum values, as they foster commitment, focus, openness, respect, and courage among the team members and stakeholders. The other options are not consistent with the Scrum values, as they involve managers or the Chief Product Owner imposing their decisions on the team members, which undermines their self-management and empowerment, and creates a lack of trust and collaboration.

NEW QUESTION # 40

Which outcome is expected as a Scrum Team matures?
(choose the best answer)

- A. They will improve their Definition of Done to include more stringent criteria.
- B. There will be no need for a timeboxed Sprint.
- C. Sprint Reviews will no longer be needed.
- D. The Sprint Retrospectives will grow to be longer than 4 hours.
- E. A Scrum Master is no longer needed since they are a mature team now.

Answer: A

Explanation:

A mature Scrum Team is expected to continuously improve their quality standards and deliver potentially releasable Increments of value that meet the Definition of Done¹². The Definition of Done is a shared understanding of what it means to complete a Product Backlog item, and it may vary from one Scrum Team to another³. As the Scrum Team matures, they may expand their Definition of Done to include more rigorous criteria, such as higher levels of testing, documentation, performance, security, usability, etc. This way, they ensure that their product Increment is always ready for release and meets the expectations of the stakeholders and customers¹².

NEW QUESTION # 41

.....

With a vast knowledge in the field, Exam-Killer is always striving hard to provide actual, authentic Scrum Exam Questions so that the candidates can pass their Professional Scrum Product Owner I (PSPO-I) exam in less time. Exam-Killer tries hard to provide the best Professional Scrum Product Owner I (PSPO-I) dumps to reduce your chances of failure in the Professional Scrum Product Owner I (PSPO-I) exam.
