

# NCP-EUC Positive Feedback, Dump NCP-EUC Collection

What's more, part of that RealValidExam NCP-EUC dumps now are free: [https://drive.google.com/open?id=1mWVvT-mwBRtTmhtluUjj0\\_iOvJpTqu0A](https://drive.google.com/open?id=1mWVvT-mwBRtTmhtluUjj0_iOvJpTqu0A)

Furthermore, applicants spend much time searching for Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam NCP-EUC Dumps updated study material, or they waste time using outdated practice material. During Nutanix Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam exam preparation, every second is valuable. If you prepare with our Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam NCP-EUC Actual Dumps, we ensure that you will become capable to crack the Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam NCP-EUC test within a few days. The Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam NCP-EUC price is affordable.

The NCP-EUC certification exam is intended for IT professionals who are responsible for managing EUC solutions in their organizations. This includes administrators, architects, engineers, and consultants. NCP-EUC exam covers a wide range of topics related to EUC, including virtual desktop infrastructure (VDI), desktop as a service (DaaS), application virtualization, and user experience (UX). By passing NCP-EUC Exam, you can demonstrate your expertise in these areas and enhance your career prospects.

## Dump Nutanix NCP-EUC Collection & Sample NCP-EUC Questions

Our NCP-EUC exam questions are supposed to help you pass the exam smoothly. Don't worry about channels to the best NCP-EUC study materials so many exam candidates admire our generosity of offering help for them. Up to now, no one has ever challenged our leading position of this area. The existence of our NCP-EUC learning guide is regarded as in favor of your efficiency of passing the exam. And the pass rate of our NCP-EUC training braindumps is high as 98% to 100%.

## Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q13-Q18):

### NEW QUESTION # 13

An administrator is using EUC broker software to manage and direct connections to virtual desktops and applications. After losing power to a host in the cluster, the administrator needs to make sure the broker VMs restart. What will happen to the broker VMs in this situation?

- A. A policy must be created so the VMs will power back on.
- B. The VMs will remain powered off until the host is back online.
- C. The VMs will live migrate to a powered-on host.
- **D. Built-in AHV policies will automatically restart the VMs.**

**Answer: D**

Explanation:

Nutanix AHV includes a native feature called VM High Availability (VMHA), which protects VMs in the event of a host failure (such as power loss).

When a host fails, the Acropolis High Availability service detects the failure. Built-in AHV policies automatically restart the affected VMs on the remaining healthy hosts in the cluster.

Live migration (Option D) is not possible because the host is already down (powered off), meaning the memory state cannot be transferred; the VMs must be restarted (booted) on new hosts. No manual policy creation (Option B) is required as this is a core default function of the AHV cluster, provided resources are available.

#### NEW QUESTION # 14

Which feature can be utilized to ensure that a container always has enough space to accommodate a specific- sized workload?

- **A. Capacity Reservation**
- B. A Storage Pool
- C. Linked Clones
- D. Thick Provisioning

**Answer: A**

Explanation:

In Nutanix storage architecture, Capacity Reservation (also known as "Reserved Capacity") is the feature designed to guarantee space at the container level.

Nutanix documentation states: "To ensure that there is space available for a storage container, you can enable capacity reservation. Capacity reservation ensures that a storage container has a minimum allocated capacity, preventing other storage containers from using that reserved space." This effectively isolates the required storage amount from the shared Storage Pool, ensuring the specific workload housed in that container always has the physical capacity it requires, regardless of the consumption by other containers in the pool.

#### NEW QUESTION # 15

Recently, the vice president Of IT infrastructure was migrated from a physical computer to a virtual desktop.

The administrator wants to ensure that this user has the best possible experience and wants to be notified if any CPU resource constraints.

The cluster's average CPU utilization is 20%.

What step would help the administrator to know when there are resource problems on the virtual desktop?

- A. Create a new alert policy to alert if the CPU on the virtual desktop's cluster is over 90%.
- B. Create a new alert policy to alert if the CPU on the virtual desktop is over and configure a Playbook to power off the virtual desktop.
- C. Create a new alert policy to alert if the CPU on the virtual desktop's host is over 90%.
- **D. Create a new alert policy to alert if the CPU on the virtual desktop is over and configure a Playbook to Slack the information to the administrator,**

**Answer: D**

Explanation:

alert policies are rules that define the conditions for generating alerts on Nutanix clusters<sup>1</sup>. You can create custom alert policies based on your specific needs and preferences<sup>2</sup>Playbooks are automated workflows that perform actions based on triggers such as alerts<sup>3</sup>. You can create playbooks using predefined alerts or alerts matching criteria<sup>3</sup>.

To ensure that the vice president of IT infrastructure has the best possible experience and to be notified if any CPU resource constraints on the virtual desktop, one possible solution is to create a new alert policy to alert if the CPU on the virtual desktop is over a certain threshold (for example, 80%) and configure a playbook to send a notification (forexample, via email or Slack) to the administrator<sup>23</sup>. This way, the administrator can monitor the performance of the virtual desktop and take appropriate actions if needed.

#### NEW QUESTION # 16

What are two types OfFrame environment delivery models? (Choose two.)

- A. Frame on Cisco LICS running VMware ESXi
- **B. BYO public cloud**
- C. Frame on HP running Hyper-V.
- **D. Nutanix private cloud model running AHV**

**Answer: B,D**

Explanation:

Frame is a cloud-native desktop-as-a-service platform that allows you to deliver virtual desktops and applications from any cloud. Frame supports multiple public clouds, such as AWS, Azure, GCP, and Alibaba Cloud2. You can bring your own public cloud account and use Frame to provision and manage your virtual desktops on demand.

Frame also supports Nutanix private cloud model running AHV, which is a native hypervisor for Nutanix Enterprise Cloud Platform. You can use Frame to deliver virtual desktops and applications from your own data center using Nutanix AHV clusters3. You can benefit from the simplicity, scalability, and performance of Nutanix hyperconverged infrastructure.

#### NEW QUESTION # 17

An administrator has finished deploying the Citrix backend infrastructure to Xi Leap and needs to expose the Citrix NetScaler VPX private VIP to the internet in order for users to be able to access the Citrix VDI desktops upon a DR failover.

What should the administrator perform in order for public internet access to be allowed to the Citrix NetScaler VPX?

- A. Executing `/mps/deployment_type.py`
- B. Disaster recovery node configured in HA mode.
- C. FQDN registered in DNS.
- **D. Floating IP Address**

**Answer: D**

Explanation:

Citrix NetScaler VPX is a virtual appliance that provides web and application load balancing, secure and remote access, acceleration, security and offload features1. To set up and configure a Citrix NetScaler VPX appliance, you need to download it from the Citrix website, install it on a hypervisor such as Citrix XenServer or Microsoft Azure23, and log on to the console using the nsroot credentials2.

To expose the Citrix NetScaler VPX private VIP to the internet in order for users to be able to access the Citrix VDI desktops upon a DR failover, one possible solution is to use a floating IP address. A floating IP address is an IP address that can be dynamically assigned to an instance by using API calls. It allows you to redirect network traffic from one instance to another without changing any DNS settings or client configuration.

#### NEW QUESTION # 18

.....

We have always believed that every user has its own uniqueness. In order to let you have a suitable way of learning. The staff of NCP-EUC study materials also produced three versions of the system: the PDF, Software and APP online. Although the content is the same in all the three versions of our NCP-EUC Exam Questions, the displays are totally different. And you will find that in our NCP-EUC practice engine, the content and versions as well as plans are the best for you.
