問題 #141

An insurance company has a connected app in its Salesforce environment that is used to integrate with a Google Workspace (formerly known as G Suite).

An identity and access management (IAM) architect has been asked to implement automation to enable users, freeze/suspend users, disable users, and reactivate existing users in Google Workspace upon similar actions in Salesforce.

Which solution is recommended to meet this requirement?

- A. Build a custom REST endpoint in Salesforce that Google Workspace can poll against.
- B. Update the Security Assertion Markup Language Just-in-Time (SAML JIT) handler in Salesforce for user provisioning and de-provisioning.
- C. Configure user Provisioning for Connected Apps.

- D. Build an Apex trigger on the userlogin object to make asynchronous callouts to Google APIs.

答案： C

問題 #142

Universal containers (UC) is building a mobile application that will make calls to the salesforce REST API.

Additionally, UC would like to provide the optimal experience for its mobile users. Which two OAuth scopes should UC configure in the connected App? Choose 2 answers

- A. full
- B. Refresh token
- C. Web
- D. API

答案： B,D

解題說明：

Explanation

The two OAuth scopes that UC should configure in the connected app are:

Refresh token. This scope allows the mobile app to obtain a refresh token from Salesforce when it obtains an access token. A refresh token can be used to obtain a new access token when the previous one expires or becomes invalid. This scope enables UC to provide an optimal experience for its mobile users by reducing the number of login prompts and authentication failures.

API. This scope allows the mobile app to make REST API calls to Salesforce using the access token.

The REST API allows the mobile app to access or manipulate data and metadata in Salesforce using HTTP methods. This scope enables UC to build a custom mobile app that can connect to Salesforce and perform various operations on Salesforce resources.

問題 #143

An Identity and Access Management (IAM) Architect is recommending Identity Connect to integrate Microsoft Active Directory (AD) with Salesforce for user provisioning, deprovisioning and single sign-on (SSO).

Which feature of Identity Connect is applicable for this scenario?

- A. Identity Connect can be deployed as a managed package on salesforce org, leveraging High Availability of Salesforce Platform out-of-the-box.
- B. When Identity Connect is in place, if a user is deprovisioned in an on-premise AD, the user's Salesforce session is revoked immediately.
- C. When configured, Identity Connect acts as an identity provider to both Active Directory and Salesforce, thus providing SSO as a default feature.
- D. If the number of provisioned users exceeds Salesforce licence allowances, identity Connect will start disabling the existing Salesforce users in First-in, First-out (FIFO) fashion.

答案： B

問題 #144

Universal Containers uses Salesforce as an identity provider and Concur as the Employee Expense management system. The HR director wants to ensure Concur accounts for employees are created only after the appropriate approval in the Salesforce org.

Which three steps should the identity architect use to implement this requirement?

Choose 3 answers

- A. Create an approval process for UserProvisioningRequest object associated with the provisioning flow.
- B. Create a connected app for Concur in Salesforce.
- C. Create an approval process for a custom object associated with the provisioning flow.
- D. Create an approval process for user object associated with the provisioning flow.
- E. Enable User Provisioning for the connected app.

答案： A,B,E

問題 #145

Universal Containers (UC) is using Active Directory as its corporate identity provider and Salesforce as its CRM for customer care agents, who use SAML based sign-on to login to Salesforce. The default agent profile does not include the Manage User permission. UC wants to dynamically update the agent role and permission sets.

Which two mechanisms are used to provision agents with the appropriate permissions?

Choose 2 answers

- A. Use Login Flow in System Context to update role and permission sets.
- B. Use SAML Just-in-Time (JIT) handler class run as an admin user to update role and permission sets.
- C. Use SAML Just-in-Time (JIT) Handler class run as current user to update role and permission sets.
- D. Use Login Flow in User Context to update role and permission sets.

答案: A,B
