Salesforce Certified MuleSoft Developer (Mule-Dev-201) Sample Questions (Q14-Q19):

NEW QUESTION # 14
Refer to the exhibit.
How should the WHERE clause be changed to set the city and state values from the configured input parameters?

- A.
- B.
- C.
- D.

Answer: B

NEW QUESTION # 15
Refer to the exhibits.
A web client submits a request to http://localhQst:8081. What is the structure of the payload at the end of the flow?

- A.
- B.
- C.
- D.

Answer: B

Explanation:
Scatter-Gather Router
The Scatter-Gather component is a routing event processor that processes a Mule event through different parallel processing routes that contain different event processors. Each route receives a reference to the Mule event and executes a sequence of one or more event processors. Each of these routes uses a separate thread to execute the event processors, and the resulting Mule event can be either the same Mule event without modifications or a new Mule event with its own payload, attributes, and variables. The Scatter-Gather component then combines the Mule events returned by each processing route into a new Mule event that is passed to the next event processor only after every route completes successfully.
The Scatter-Gather component executes each route in parallel, not sequentially. Parallel execution of routes can greatly increase the efficiency of your Mule application and may provide more information than sequential processing.
Mule Ref Doc : https://docs.mulesoft.com/mule-runtime/4.3/scatter-gather-concept

NEW QUESTION # 16
Refer to the exhibit.
What can be added to the flow to persist data across different flow executions?

- A. Properties of the Mule runtime flow object
- B. session variables
- C. Key/value pairs in the ObjectStore
- D. properties of the Mule runtime app object

Answer: C

Explanation:
An object store is a facility for storing objects in or across Mule applications. Mule runtime engine (Mule) uses object stores to persist data for eventual retrieval. Internally, Mule uses object stores in various filters, routers, and other message processors that need to store states between messages.
Object stores are available in all deployment targets. If you deploy your application to CloudHub, you can also use Object Store V2.
Correct answer is Key/value pair in Object store
MuleSoft Documentation reference : https://docs.mulesoft.com/mule-runtime/4.3/mule-object-stores#use-cases

NEW QUESTION # 17
What is the correct syntax to define and call a function in Database?

- A.
- B.
- C.
- D.

Answer: C

Explanation:
Keyword to ad function in Dataweave transformation is fun. Hence option 2 and 4 are invalid. Also parameters needs to be passed exactly in same order as defined in function definition. Hence correct answer is' fun addKV(object: Object, key: String, value: Any) = object ++ {(key):(value)}
---
addKV ({"hello': "world"}, "hola", "mundo")
MuleSoft Documentation Reference : https://docs.mulesoft.com/mule-runtime/4.3/dataweave-functions DataWeave FunctionDefinition Syntax To define a function in DataWeave use the following syntax:
fun myFunction(param1, param2, ...) = <code to execute>
The fun keyword starts the definition of a function.
myFunction is the name you define for the function.
Function namesmust be valid identifiers.
(param1, param2, ... , paramn) represents the parameters that your function accepts.
You can specify from zero to any number of parameters, separated by commas (,) and enclosed in parentheses.
The = sign marks the beginning of thecode block to execute when the function is called.
<code to execute> represents the actual code that you define for your function.

NEW QUESTION # 18
Which Mule component provides a real-time, graphical representation of the APIs and mule applications that are running and discoverable?

- A. API Manager
- B. API Notebook
- C. Anypoint Visualizer
- D. Runtime Manager

Answer: C

Explanation:
Correct answer is Anypoint Visualizer
MuleSoft Doc Ref : https://docs.mulesoft.com/visualizer/
Anypoint Visualizer provides a real-time, graphical representation of the APIs, and Mule applications that are running and discoverable. It also displays third-party systems that are invoked by a Mule API, proxy, or application within your application network. The data displayed in the graph is dynamically updated and does not require prior configuration. Additionally, the data displayed is secure, as only users with the proper permissions can view the application network graph.
