InsuranceSuite-Analyst Book Pdf - Exam InsuranceSuite-Analyst Answers

Your personal information on our InsuranceSuite-Analyst exam braindumps such as your names, email address will be strictly protected by our system. Our workers will never randomly spread your information to other merchants for making money. In short, your purchasing of our InsuranceSuite-Analyst Preparation quiz is totally safe and sound. Also, our website has strong back protection program to resist attacking from hackers. We will live up to your trust and keep advancing on our InsuranceSuite-Analyst

study materials.

Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q11-Q16):

NEW QUESTION # 11
Which of the following is an example of how User Story Cards can be customized:

- A. Duplicate the requirement fields on all tabs
- B. Add a new column for test results
- C. Add a new column column to each tab with requirement number
- D. Add a new tab for needs like data mapping
- E. Add a requirements field to the Ul Mockup Tab

Answer: D

Explanation:
Comprehensive and Detailed Explanation:
In the Guidewire SurePath methodology, while there is a standard template for User Story Cards (typically containing standard fields like Description, Acceptance Criteria, and Assumptions), the methodology explicitly allows for customization to suit specific project needs or story types.
Adding a new tab for needs like Data Mapping (Option B)is the most common and valid example of this customization.
* Context:ForIntegration User Stories, the standard "As a... I want..." text format is often insufficient to capture the technical detail required for data exchange.
* The Customization:Analysts often add a dedicated "Data Mapping" tab (if using an Excel-based card) or a specific section (if using Jira/Rally) to define theSource-to-Target mapping. This table specifies exactly which field in the Guidewire Data Model (e.g., Claim.LossDate) maps to which field in the external system.
* Benefit:This keeps the main "Story" tab clean and readable while providing the developers with the precise technical specifications they need in the same artifact, rather than forcing them to hunt for a separate spreadsheet.
Why other options are incorrect:
* E. Duplicate requirement fields:This creates redundancy and maintenance issues (updating one tab but forgetting the other).
* A. Add requirements to Mockup Tab:UI Mockups are visual aids; requirements (rules) should remain in the Acceptance Criteria section to ensure they are tested.
* C. Add column for test results:TestResultsare execution artifacts generatedafterthe story is built; they belong in the Test Management tool (like Zephyr or ALM), not on the Requirements Card itself.

NEW QUESTION # 12
During the development phase of the project, what activities are completed in relationship to user stories? (Select two)

- A. User story solutions are configured by developers
- B. User stories are all evaluated for inclusion in project scope
- C. User stories are tested by Quality Analysts against acceptance criteria
- D. User stories are initially prioritized for scheduling in sprints
- E. User stories are checked into the production code branch by developers

Answer: A,C

Explanation:
Thedevelopment phaseof a Guidewire project is where approved and prioritized user stories are implemented and validated.
During this phase,developers configure solutionsfor user stories (Option C). This includes product model configuration, rules, UI changes, and integrations as required by the story.
At the same time,Quality Analysts test user stories against documented acceptance criteria(Option B).
This ensures the implemented solution meets business expectations and behaves correctly across scenarios.
The other options occur in different phases. Scope evaluation and prioritization happen during Inception, and code is promoted to production during Deployment.

NEW QUESTION # 13
During a major upgrade of the Guidewire Cloud platform, a customer experiences unexpected downtime for their production

environment. What is the MOST likely reason why strict adherence to Guidewire Cloud Standards could have mitigated this issue?

- A. Adhering to Cloud Standards ensures that customer-specific customizations are compatible with the new platform version, reducing the risk of upgrade failures.
- B. Following Cloud Standards eliminates the need for any customer involvement during Guidewire Cloud platform upgrades.
- C. Cloud Standards dictate the timing and duration of all platform upgrades, allowing customers to control the schedule.
- D. Cloud Standards provide a mechanism to automatically roll back the upgrade in case of any issues detected during the process.

Answer: A

Explanation:
Guidewire Cloud Standards are designed to ensure upgradeability, stability, and reliability of customer environments. The most likely reason adherence could have mitigated unexpected downtime is Option C.
By following Cloud Standards, customer-specific customizations remain compatible with platform upgrades
. These standards restrict unsupported customization patterns and enforce best practices that ensure new platform versions can be applied smoothly.
The other options are incorrect. Cloud Standards do not eliminate customer involvement (Option A), do not guarantee automatic rollback (Option B), and do not give customers control over upgrade schedules (Option D).

NEW QUESTION # 14
Identify which of the following are phases in the Guidewire Project Lifecycle:

- A. Delivery
- B. Deployment
- C. Development
- D. Maintenance
- E. Initiation
- F. Inception

Answer: B,C,F

Explanation:
The Guidewire implementation methodology (SurePath) structures the project lifecycle into distinct phases to ensure value delivery and risk management. Based on the InsuranceSuite Analyst documentation, the correct phases from your list are:
* Inception (C):This is the initial phase of the project execution (following Pre-Inception). The primary goals are to confirm the scope, produce the initial backlog of user stories, finalize the project plan, and obtain agreement on the Minimum Viable Product (MVP).
* Development (F):This is the iterative "Construction" phase. It is divided into multiple Sprints. During this phase, the team configures the application, develops integration points, and conducts unit testing to turn user stories into working software.
* Deployment (D):This phase focuses on moving the application from the test environment to the Production environment. It includes final "Deployment Prep" activities such as data migration, performance tuning, user training, and the actual "Go-Live" event.
Why the other options are incorrect:
* A. Maintenance:While "Support & Maintenance" occurs after the project, it is considered the operational lifecycle (BAU) rather than a core implementation project phase.
* B. Delivery:This is the overarching term for the entire engagement (e.g., "Guidewire Delivery Methodology") but is not a specific phase name itself.
* E. Initiation:Guidewire terminology uses "Pre-Inception" or "Inception" rather than the generic PMI term "Initiation."

NEW QUESTION # 15
Which resource provides specific guidance to Business Analysts on how to document User Story Cards?

- A. SurePath collateral - User Story Handbook
- B. Miro - Business Analyst Handbook
- C. Miro - User Story Job Aid
- D. SurePath collateral - User Story Guide

Answer: A

Explanation:

In Guidewire SurePath methodology, documenting high-qualityUser Story Cardsis a critical responsibility of the Business Analyst. To support this, Guidewire provides standardized collateral that defineshow stories should be written, structured, and refinedto ensure consistency and clarity across implementations. The correct resource for this purpose is theSurePath collateral - User Story Handbook, makingOption Bthe correct answer.

TheUser Story Handbookis specifically designed for Business Analysts working on Guidewire projects. It provides detailed guidance on how to document user stories, including recommended story formats, required elements, and examples aligned with Guidewire best practices. The handbook explains how to capture business intent, define scope boundaries, and write clear, testable acceptance criteria that support Agile delivery.

This resource also aligns user stories withGuidewire out-of-the-box (OOTB) functionality, helping analysts avoid unnecessary customization and ensuring that requirements are value-driven. It supports consistency across teams by establishing a shared understanding of what constitutes a "ready" story before it enters development.

The other options are incorrect. Miro-based resources (Options A and D) may be used as collaboration or visualization tools but are not official Guidewire guidance for documenting user stories. The "User Story Guide" (Option C) is not the recognized SurePath resource; theUser Story Handbookis the authoritative reference.

By using the SurePathUser Story Handbook, Business Analysts ensure that stories are well-structured, aligned with Agile principles, and ready for elaboration, story huddles, and successful implementation within Guidewire InsuranceSuite.

NEW QUESTION # 16
......

In this version, you don't need an active internet connection to use the InsuranceSuite-Analyst practice test software. This software mimics the style of real test so that users find out pattern of the real test and kill the exam anxiety. Real4dumps offline practice exam is customizable and users can change questions and duration of Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam(InsuranceSuite-Analyst) mock tests. All the given practice questions in the desktop software are identical to the Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam(InsuranceSuite-Analyst) actual test.
