101-500 Valid Exam Papers & Reliable 101-500 Test Guide

Our veteran professional generalize the most important points of questions easily tested in the 101-500 practice exam into our practice questions. Their professional work-skill paid off after our 101-500 training materials being acceptable by tens of thousands

of exam candidates among the market. They have delicate perception of the 101-500 study quiz over ten years. So they are dependable. You will have a big future as long as you choose us!

The Lpi 101-500 exam is developed and maintained by the Linux Professional Institute (LPI), a non-profit organization that is dedicated to promoting and certifying the use of Linux and open source technologies. 101-500 Exam is intended for individuals who are interested in pursuing a career in Linux administration or who want to demonstrate their proficiency in the Linux operating system.

Lpi LPIC-1 Exam 101, Part 1 of 2, version 5.0 Sample Questions (Q253-Q258):

NEW QUESTION # 253

Which of the following commands lists the dependencies of a given dpkg package?

- A. apt-cache requires package
- B. apt-cache dependencies package
- C. apt-cache depends-onpackage
- D. apt-cache depends package

Answer: D

NEW QUESTION # 254

Which command will convert all tab characters in a file to spaces and print that to standard out?

- A. expand
- B. retab
- C. convert
- D. untab

Answer: A

NEW QUESTION # 255

Which of the following apt-get commands will install the newest versions of all currently installed packages without removing any packages or installing new packages that are not already installed?

- A. upgrade
- B. install
- C. update
- D. auto-update
- E. dist-upgrade

Answer: A

NEW QUESTION # 256

The system is having trouble and the engineer wants to bypass the usual /sbin/init start up and run /bin/sh. What is the usual way to pass this change to the kernel from your boot loader?

- A. Pass init=/bin/sh on the kernel parameter line.
- B. Start in runlevel 1.
- C. Pass start=/bin/sh on the kernel parameter line.
- D. Pass /bin/sh on the kernel parameter line.

Answer: A

Explanation:

The usual way to pass this change to the kernel from the boot loader is to pass init=/bin/sh on the kernel parameter line¹. The init kernel parameter is used to specify the program that is run as the first process after the kernel is loaded³. By default, this program is

/sbin/init, which is responsible for starting and managing other processes and services⁴. However, by passing `init=/bin/sh`, the kernel will run `/bin/sh` instead, which is a shell program that allows the user to execute commands interactively or from a script⁵. This way, the user can bypass the usual initialization process and run `/bin/sh` as the root user, which can be useful for troubleshooting or recovery purposes¹².

The other options in the question are not correct because:

* A. Start in runlevel 1: This option would not bypass the `/sbin/init` program, but rather instruct it to start the system in single-user mode, which is a mode that allows only the root user to log in, and disables all network services and graphical interfaces. To start in runlevel 1, the user would need to pass `single` or `1` on the kernel parameter line, not `init=/bin/sh`.

* C. Pass `/bin/sh` on the kernel parameter line: This option would not work, because the kernel would not recognize `/bin/sh` as a valid parameter and would ignore it. The kernel only accepts parameters that have a specific format, such as `name=value` or `name.flag`³. To specify the `init` program, the user would need to use the `init=` prefix, as in `init=/bin/sh`³.

* D. Pass `start=/bin/sh` on the kernel parameter line: This option would also not work, because the kernel does not have a `start` parameter. The user would need to use the `init` parameter, as in `init=/bin/sh`³.
