

New F5 F5CAB5 Braindumps Files | F5CAB5 Reliable Exam Sample

BONUS!!! Download part of PassSureExam F5CAB5 dumps for free: <https://drive.google.com/open?id=1E9pmriWVW89y3IYLWpf7YYujVRTI4BEy>

Now, if you use F5CAB5 preparation materials, you only need to learn twenty to thirty hours to go to the exam. And, you will have a 99% chance to pass the exam. Of course, you don't have to buy any other study materials. F5CAB5 exam questions can satisfy all your learning needs. During this time, you must really be learning. If you just put F5CAB5 Real Exam in front of them and didn't look at them, then we have no way. F5CAB5 exam questions want to work with you to help you achieve your dreams.

F5 F5CAB5 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Given a scenario, review basic stats to confirm functionality: This section involves interpreting traffic object statistics and network configuration statistics to validate system functionality.
Topic 2	<ul style="list-style-type: none">Identify network level performance issues: This section focuses on diagnosing network problems including packet capture needs, interface availability, packet drops, speed and duplex settings, and TCP profile optimization.,
Topic 3	<ul style="list-style-type: none">Identify the reason load balancing is not working as expected: This domain addresses troubleshooting load balancing by analyzing persistence, priority groups, rate limits, health monitor configurations, and availability status.

Unparalleled F5 New F5CAB5 Braindumps Files With Interactive Test

Engine & The Best F5CAB5 Reliable Exam Sample

Our F5CAB5 learning guide allows you to study anytime, anywhere. If you are concerned that your study time cannot be guaranteed, then our F5CAB5 learning guide is your best choice because it allows you to learn from time to time and make full use of all the time available for learning. Our F5CAB5 learning guide is for the world and users are very extensive. In order to give users a better experience, we have been constantly improving. The high quality and efficiency of F5CAB5 Test Guide has been recognized by users. The high passing rate of F5CAB5 exam training is its biggest feature. As long as you use F5CAB5 test guide, you can certainly harvest what you want thing.

F5 BIG-IP Administration Support and Troubleshooting Sample Questions (Q35-Q40):

NEW QUESTION # 35

A BIG-IP Administrator makes a configuration change to the BIG-IP device. Which file logs the message regarding the configuration change?

- A. /var/log/messages
- B. /var/log/audit
- C. /var/log/secure
- D. /var/log/user.log

Answer: B

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Support and Troubleshooting documents: Troubleshooting configuration-related issues requires a clear trail of what was changed and by whom. The BIG-IP system includes a dedicated audit logging feature for this purpose²⁸. Whenever a system object—such as a virtual server, pool, or iRule—is created, modified, or deleted, the system records the event in /var/log/audit²⁹. These logs provide critical context during troubleshooting by showing if a performance drop or traffic failure coincided with a specific administrative action³⁰. Unlike /var/log/ltm, which focuses on local traffic events like pool member status changes, or /var/log/secure, which handles authentication attempts, the audit log specifically tracks the "how" and "when" of configuration changes³¹. This is a vital resource for administrators to determine if a virtual server is not working as expected due to a recent manual change or an automated system action, allowing for a rapid "rollback" or correction of the configuration.

NEW QUESTION # 36

Exhibit:

A BIG-IP Administrator configured a virtual server with a pool of 3 members and selected the Round Robin load balancing method to evenly distribute traffic across the pool members. During initial testing, traffic was not evenly distributed and the pool member 172.16.20.3 received more traffic than the other pool members.

Refer to the exhibit and the virtual server configuration provided below:

Plaintext

```
ltm virtual http.vs {
  destination 10.10.1.100:http
  ip-protocol tcp
  mask 255.255.255.255
  persist {
    source_addr { default yes }
  }
  pool http.pool
  profiles {
    tcp {}
  }
  serverssl-use-sni disabled
  source 0.0.0.0/0
  source-address-translation {
    type automap
  }
  translate-address enabled
}
```

What is the most likely cause of this behavior?

- A. Pool members' ratio settings are causing the uneven traffic distribution
- B. Automap source address translation can cause uneven load balancing
- C. Round Robin requires an HTTP profile to work efficiently
- **D. A persistence profile assigned to the virtual server can cause uneven load balancing**

Answer: D

Explanation:

The primary reason for the uneven traffic distribution is the presence of a Persistence Profile in the virtual server configuration.

Load Balancing vs. Persistence: While the Round Robin method is designed to distribute new connections sequentially among pool members, Persistence overrides this logic for existing clients.

Source Address Persistence: The configuration shows source_addr persistence is enabled. This ensures that once a client (identified by their source IP) is mapped to a pool member, all subsequent connections from that same IP will be sent to the same member for the duration of the persistence record.

Uneven Distribution Logic: If one source IP address generates significantly more connections or longer-lived sessions than others-or if many clients appear behind a single NAT/Proxy IP-that specific pool member (in this case, 172.16.20.3) will receive a disproportionate amount of traffic compared to the others.

Evaluating Other Options:

Automap (Option A): SNAT Automap changes the source IP between the BIG-IP and the pool member. It does not impact the BIG-IP's ability to load balance incoming client requests.

Ratio Settings (Option B): In the provided exhibit, the pool members have a Ratio of 1, 2, and 3 respectively. While a higher ratio does direct more traffic to a member, the question asks for the "most likely cause" in the context of the provided ltm virtual configuration, which explicitly highlights the persistence override.

HTTP Profile (Option C): Round Robin is a Layer 4 load balancing algorithm and does not require a Layer 7 HTTP profile to function.

NEW QUESTION # 37

A BIG-IP Administrator configured the following virtual server to pass traffic on all addresses and ports. After configuration is completed, the BIG-IP Administrator notices that the virtual server is unable to pass traffic.

Plaintext

```
ltm virtual forwarding_any_vs {
  destination 0.0.0.0:any
  ip-forward
  mask 255.255.255.255
  profiles {
    fastL4 {}
  }
  serverssl-use-sni disabled
  source 0.0.0.0/0
  translate-address disabled
  translate-port disabled
}
```

Which part of the configuration is the cause of the issue?

- A. Incorrect translate-address configured
- **B. Incorrect mask 255.255.255.255**
- C. Incorrect destination configured

Answer: B

Explanation:

The failure of the Forwarding (IP) virtual server is caused by an incorrect Network Mask configuration for a wildcard destination.

Wildcard Destination: The administrator intends to create a "Wildcard" Virtual Server that listens for any destination IP address (0.0.0.0).

The Mask Conflict: A mask of 255.255.255.255 (or /32) tells the BIG-IP to look for a specific, single host address. When combined with 0.0.0.0, the system is literally looking for traffic destined for the IP 0.0.0.0, which is not a valid routable destination for standard traffic.

Correct Configuration: To allow the virtual server to catch traffic for any IP address, the mask must be changed to 0.0.0.0 (or /0).

This signifies that the system should ignore all bits of the destination address and match everything.

Forwarding Logic: The rest of the configuration—including ip-forward (Forwarding IP type), translate-address disabled, and translate-port disabled—is correct for a BIG-IP acting as a router/gateway.

NEW QUESTION # 38

During a high-demand traffic event, the BIG-IP Administrator needs to limit the number of new connections per second allowed to a Virtual Server. What should the administrator apply to accomplish this task?

- A. A connection limit to the Virtual Server
- B. A OneConnect profile to the Virtual Server
- C. A connection rate limit to the Virtual Server
- D. An HTTP Compression profile to the Virtual Server

Answer: C

Explanation:

F5 BIG-IP provides two distinct ways to throttle traffic on a Virtual Server: total capacity and velocity.

Connection Rate Limit: This setting specifically controls the number of new connection attempts per second. It is the correct tool for managing traffic spikes and protecting backend resources from being overwhelmed by a high frequency of new requests.

Comparison (Connection Limit): A standard Connection Limit (Option C) restricts the total concurrent connections allowed at any one time, regardless of how fast they arrive.

NEW QUESTION # 39

Which command displays ARP table entries?

- A. show net arp
- B. show sys dns
- C. show net self
- D. show sys route

Answer: A

Explanation:

Used to verify IP-to-MAC address mappings.

NEW QUESTION # 40

.....

The pass rate is 98.95% for the F5CAB5 exam torrent, and you can pass the exam if you choose us. The F5CAB5 exam dumps we recommend to you are the latest information we have, with that you can know the information of the exam center timely.

Furthermore, with skilled professionals to revise the F5CAB5 Questions and answers, the quality is high. And we offer you free update for 365 days, therefore you can get update version timely, and the update version will be sent to your email address automatically.
