

NS0-185 New Dumps Ebook | Guaranteed NS0-185 Success

If you are searching for an easy and rewarding study content to get through the NS0-185 Exam, you are at the right place to get success. Our NS0-185 exam questions can help you pass the exam and achieve the according certification with ease. If you study with our NS0-185 Practice Guide for 20 to 30 hours, then you will be bound to pass the exam with confidence. And the price for our NS0-185 training engine is quite favourable. What are you waiting for? Just come and buy it!

People can achieve great success without an outstanding education and that the Network Appliance qualifications a successful person needs can be acquired through the study to get some professional certifications. So it cannot be denied that suitable NS0-185 actual test guide do help you a lot; thus we strongly recommend our NS0-185 Exam Questions for not only that our NS0-185 training guide is designed to different versions: PDF, Soft and APP versions, which can offer you different study methods, but also that our NS0-185 learning perp can help you pass the exam without difficulty.

Guaranteed NS0-185 Success, Latest NS0-185 Exam Simulator

We will provide you with professional advice before you buy our NS0-185 guide materials. If you have problems in the process of using our NS0-185 study questions, as long as you contact us anytime and anywhere, we will provide you with remote assistance until that all the problems on our NS0-185 Exam Braindumps are solved. When you send us a message, we will reply immediately and we will never waste your precious time on studying our NS0-185 practice quiz.

Network Appliance NetApp Storage Installation Engineer, ONTAP Professional Exam Sample Questions (Q112-Q117):

NEW QUESTION # 112

Poppy Pet Care Kennels is developing a website system. The following are potential actors:

- A) Poppy Pet Care Kennels
- B) Kennel assistants
- C) The managing director
- D) Customers
- E) Quality manager

Which of these would be drawn as actors on the use case diagram?

- A. A, D and E
- **B, D and E**
- C. A, B and C
- D. B, C and E

Answer: B

Explanation:

Actors are external users interacting with the system. Kennel assistants, customers, and the quality manager directly interact with the system. The organization itself and managing director are stakeholders, not actors.

NEW QUESTION # 113

You are a NetApp Professional Services engineer. You have completed an ONTAP cluster installation and need to collect configuration information to enable creation of a Service Event Report (SER).

Which tool would you use?

- A. Active IQ Config Advisor worksheet
- B. ONTAP System Manager
- **C. NetApp Docs output report**
- D. Active IQ scheduled reports

Answer: C

Explanation:

Service Event Reports require standardized installation and configuration data. NetApp Docs generates structured output reports specifically designed for SER creation, including hardware, cabling, and configuration details. Other tools do not produce SER-formatted documentation.

NEW QUESTION # 114

After the installation of a new ONTAP 9.8 cluster, you have to verify if AutoSupport works.

In this scenario, which two commands would you use to accomplish this task? (Choose two.)

- **A. system node autosupport history show**
- B. system node autosupport check show
- C. system node autosupport destination show
- **D. system node autosupport invoke**

Answer: A,D

Explanation:

AutoSupport verification requires checking history and generating a test message. The history command confirms delivery, and invoke sends a test AutoSupport. Therefore, A and D are correct.

NEW QUESTION # 115

You are setting up a peer relationship between two ONTAP clusters.

In this scenario, which two statements are true regarding authentication? (Choose two.)

- A. Peering authentication can be configured using LDAP users and groups.
- B. Peering authentication status can be verified with the cluster peer show command.
- C. Peering authentication can use an ONTAP generated passphrase.
- D. Peering authentication is required before enabling peering encryption.

Answer: B,C

Explanation:

Explanation (250-350 words):

Cluster peering authentication is a foundational ONTAP SAN concept that ensures secure trust between clusters before data replication can occur. Authentication is performed during the peering process and establishes mutual trust.

ONTAP supports passphrase-based authentication, where a passphrase is either user-defined or automatically generated by ONTAP. This passphrase is exchanged between clusters to authenticate the peer relationship. LDAP is not used for cluster peering authentication.

Administrators can verify the authentication and status of cluster peering relationships using the cluster peer show command, which displays peer state, availability, and authentication status.

Peering encryption can be enabled independently and does not require authentication to be completed first, making option C incorrect.

Therefore, the correct answers are A and D.

NEW QUESTION # 116

You have a 2-node switchless cluster named clusterA. You are planning on adding two additional nodes to clusterA.

What must you consider before you add the additional nodes to clusterA?

- A. Convert clusterA to a switched cluster by migrating the data LIFs from direct connect to the cluster interconnect switch.
- B. Convert clusterA to a switched cluster by migrating the cluster LIFs from direct connect to the cluster interconnect switch.
- C. Convert clusterA to a single-node cluster.
- D. Use direct connect to add the additional nodes to clusterA.

Answer: B

Explanation:

A 2-node switchless cluster is limited to two nodes and uses direct connections for cluster LIFs. Before adding additional nodes, ONTAP requires converting the environment into a switched cluster.

This conversion involves installing cluster interconnect switches and migrating the cluster LIFs from direct connections to the new cluster interconnect switches. Data LIFs are not involved in cluster communication and do not need migration for cluster expansion. Direct connect cannot support more than two nodes, and converting to a single-node cluster is invalid.

Therefore, the correct answer is C.

NEW QUESTION # 117

.....

As far as our Network Appliance NS0-185 study guide is concerned, the PDF version brings you much convenience with regard to the following advantage. The PDF version of our NS0-185 learning materials contain demo where a part of questions selected from the entire version of our NS0-185 Exam Quiz is contained. In this way, you have a general understanding of our Network Appliance NS0-185 actual prep exam, which must be beneficial for your choice of your suitable exam files.
