Salesforce Platform Developer II Sample Questions (Q10-Q15):

NEW QUESTION # 10
Universal Containers allows customers to log into a Salesforce Community and update their orders via a custom Visualforce page. Universal Containers' sales representatives can edit the orders on the same Visualforce page.
What should a developer use in an Apex test class to test that record sharing is enforced on the Visualforce page?

- A. use System. profiles() to test as an administrator and a community user.
- B. use System. profiles=() to test as a sales rep and a community user.
- C. use System. runsAs () to test as an administrator and a community user.
- D. use System. profiles1h=() to test as a sales rep and a community user.

Answer: D

NEW QUESTION # 11
A developer is creating a Lightning web component that displays a list of records in a lightning-datatable.
After saving a new record to the database, the list is not updating.

What should the developer change in the code above for this to
happen?

- A. Create a variable to store the result and call refreshpex().
- B. Add the @track decorator to the data variable.
- C. Call rafrasnApex() ON this.dazta.
- D. Create a new variable to store the result and annotate it with @track.

Answer: A

Explanation:
In Lightning Web Components (LWC), the data displayed in a component is not automatically refreshed when a new record is saved to the database. To refresh the displayed list of records in a lightning-datatable after a save operation, developers should use the refreshApex() function. This function is imported from the
@salesforce/apex module and is used to refresh the cache and re-execute the Apex wire method to fetch the latest data from the server. The @track decorator is no longer necessary in most cases due to reactive properties being the default behavior in LWC as of Spring '20 release. Also, calling refreshApex() on this.data directly or creating a new tracked variable will not initiate a refresh of the cached data.
