As is known to us, the quality is an essential standard for a lot of people consuming movements, and the high quality of the Analytics-DA-201 guide questions is always reflected in the efficiency. We are glad to tell you that the Analytics-DA-201 actual dumps from our company have a high quality and efficiency. If you decide to choose Analytics-DA-201 Actual Dumps as you first study tool, it will be very possible for you to pass the exam successfully, and then you will get the related certification in a short time.

Salesforce Analytics-DA-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Object-Oriented Design: This section of the exam evaluates the SAP ABAP Cloud Developer's understanding of object-oriented principles in the ABAP context. It focuses on class-based programming, inheritance, interfaces, and polymorphism, all crucial for building modular and maintainable ABAP cloud applications.
Topic 2	<ul style="list-style-type: none"> SAP Clean Core Extensibility and ABAP Cloud: This part of the exam targets the SAP S 4HANA Technical Consultant and covers concepts of clean core extensibility using ABAP in the cloud. The focus is on in-app and side-by-side extensibility techniques, ensuring that custom code complies with cloud-readiness principles and does not compromise the upgrade stability of core systems.
Topic 3	<ul style="list-style-type: none"> ABAP Core Data Services and Data Modeling: This section of the exam measures the skills of the SAP ABAP Cloud Developer and covers the fundamental understanding of core data services (CDS) and how to design data models in the SAP ABAP environment. Candidates are expected to know how to define, consume, and optimize CDS views effectively to support application development in the cloud.
Topic 4	<ul style="list-style-type: none"> Core ABAP Programming: This part of the exam assesses the foundational programming skills of the SAP S 4HANA Technical Consultant. It includes knowledge of syntax, control structures, modularization, and internal tables in ABAP. The section aims to validate the candidate's proficiency in writing clean, efficient ABAP code using best practices.
Topic 5	<ul style="list-style-type: none"> ABAP SQL and Code Pushdown: This section of the exam measures the competencies of the SAP ABAP Cloud Developer related to performance optimization through ABAP SQL and code pushdown techniques. It ensures that the developer understands how to shift logic to the database layer using efficient SQL scripting to enhance performance in data-intensive applications.

Salesforce Analytics-DA-201 Free Sample Questions & Detail Analytics-DA-201 Explanation

In order to allow our customers to better understand our Analytics-DA-201 quiz prep, we will provide clues for customers to download in order to understand our Analytics-DA-201 exam torrent in advance and see if our products are suitable for you. As long as you have questions, you can send us an email and we have staff responsible for ensuring 24-hour service to help you solve your problems. If you use our Analytics-DA-201 Exam Torrent, we will provide you with a comprehensive service to overcome your difficulties and effectively improve your ability. If you can take the time to learn about our Analytics-DA-201 quiz prep, I believe you will be interested in our products. Our learning materials are practically tested, choosing our Analytics-DA-201 exam guide, you will get unexpected surprise.

Salesforce Certified Tableau Data Analyst Sample Questions (Q12-Q17):

NEW QUESTION # 12

You are developing a data source in Tableau Prep.

You have two tables named Orders and Employees.

The Orders table was created in 2019 and contains the following columns.

The Employees table contains all the employee information for the various sales teams in the sales department and contains the following columns. You want to prepare the data so that you can analyze sales trends over time for every sales team.

Which three actions should you perform in order? (Place the three correct options in order. Use the arrows to move Options to Answer Area. Use Answer Area arrows to re-order the options.)

Answer:

Explanation:

There are different ways to prepare the data in Tableau Prep, but one possible answer is:

Answer area:

* Join the tables.

* Aggregate the data by Sales Team.

* Add the following filter to the Employees table: Sale Team - Team Alpha.

To analyze sales trends over time for every sales team, you need to combine the data from the Orders and Employees tables. You can do this by joining the tables on the Rep ID column, which is a common identifier for both tables. This will create a single table with all the columns from both tables. Next, you need to aggregate the data by Sales Team, which is the level of analysis you want. You can do this by grouping the data by the Sales Team column and applying an aggregation function (such as sum, average, count, etc.) to the other columns that you want to measure (such as Total Amount, Rep Tenure, etc.). This will create a summary table with one row for each sales team and the aggregated values for the other columns. Finally, you need to filter the data to focus on a specific sales team, such as Team Alpha. You can do this by adding a filter to the Employees table and selecting only the rows where Sales Team equals Team Alpha. This will remove the rows for other sales teams and keep only the data for Team Alpha.

NEW QUESTION # 13

Open the link to Book1 found on the desktop. Open the CategoryPercentage worksheet.

Modify the bar chart show the percentage of sales for each Subcategory within every Category. The total percentage for every Category must be 100%.

Answer:

Explanation:

check the steps below in explanation.

Explanation:

To modify the bar chart to show the percentage of sales for each Subcategory within every Category, you need to do the following steps:

- * Open the link to Book1 found on the desktop. This will open the Tableau workbook that contains the CategoryPercentage worksheet.
 - * Click on the CategoryPercentage tab at the bottom of the workbook to open the worksheet. You will see a bar chart that shows the total sales for each Subcategory across all Categories.
 - * Right-click on Sales on the Columns shelf and select Add Table Calculation from the menu. This will open a dialog box that allows you to apply a calculation to your measure.
 - * Select Percent of Total from the Calculation Type drop-down list. This will calculate the percentage of sales for each Subcategory out of the total sales for all Subcategories.
 - * Select Category from the Compute Using drop-down list. This will calculate the percentage of sales for each Subcategory within every Category, instead of across all Categories. The total percentage for every Category will be 100%.
 - * Click OK to apply the table calculation. You will see that the bar chart now shows the percentage of sales for each Subcategory within every Category.

NEW QUESTION # 14

You have the following dashboard.

From the context menu of Sales over time, select Ignore Actions.
 Several days later, you decide that you want to filter both Sales over time and Detail table by selecting a data point on the map.
 What should you do?

- A. From the context menu of Detail table, select Ignore Actions.
- B. From the context menu of Sales over time, select Use as Filter and then deselect Use as Filter
- **C. From the context menu of Profits by state, deselect Use as Filter and then select Use as Filter.**
- D. From the context menu of Sales over time, select Filters and then select Enable Auto Update.

Answer: C

NEW QUESTION # 15

A Data Analyst needs to update an existing dashboard. The current dashboard shows financial results data, and users have asked for a comparison of budgets to be added to the dashboard. A new data source has been created that includes both the actual costs and budgets and was published to the corporate Tableau site.
 How should the analyst update the existing dashboard?

- A. Create a copy of the existing workbook, open it in Tableau Desktop, and connect to the new data source. Update each sheet, using fields from the new data source.
- B. Edit the existing workbook on the Tableau site and connect to the new data source. Blend the new data source with the existing data source.
- **C. Edit the existing workbook on the Tableau site and connect to the new data source. From the Data menu, choose Replace Data Source.**
- D. Create a new workbook in Tableau Desktop and connect to the new data source. Copy and paste all the tabs from the old workbook into the new one.

Answer: C

NEW QUESTION # 16

You have the following visualization.

The Last() calculation is set to compute using Table (across)
 Which value will appear in the crosstab for the Consumer segment of the year 2018 if you change compute to use Order Date?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D
