## EAEP2201 Latest Test Simulator | Reliable EAEP2201 Exam Testking

On the one hand, our company hired the top experts in each qualification examination field to write the EAEP2201 training materials, so as to ensure that our products have a very high quality, so that users can rest assured that the use of our research materials. On the other hand, under the guidance of high quality research materials, the rate of adoption of the EAEP2201 Study Materials preparation is up to 98% to 100%.

Esri EAEP2201 certification exam is a rigorous and comprehensive assessment of an individual's knowledge and skills in enterprise GIS administration. EAEP2201 Exam consists of 100 multiple-choice questions and is timed at 2.5 hours. To pass the exam, candidates must score at least 70%.

## Esri Enterprise Administration Professional 2201 Sample Questions (Q16-Q21):

### NEW QUESTION # 16

A small organization has an ArcGIS Enterprise deployment where all components are installed on one virtual server hosted on Microsoft Azure. Each deployment component was initially installed manually. The organization wants to upgrade its deployment to the most recent version in the most efficient way.

Which action should the organization perform?

- A. Upgrade the entire deployment with ArcGIS Enterprise Builder
- B. Run the ArcGIS Enterprise Cloud Builder for Microsoft Azure tool
- **C. Manually upgrade each ArcGIS Enterprise component**

**Answer: C**

Explanation:

For ArcGIS Enterprise deployments on Microsoft Azure that were initially installed manually, the recommended approach for upgrading is to manually upgrade each component. This involves downloading the latest installers for each component (Portal for ArcGIS, ArcGIS Server, ArcGIS Data Store, etc.) and following the standard upgrade procedures for each. This method ensures that each component is properly updated and configured according to the organization's specific setup.

Using ArcGIS Enterprise Builder (Option B) is intended for new installations and is not suitable for upgrading existing deployments. ArcGIS Enterprise Cloud Builder for Microsoft Azure (Option C) is designed for deployments that were originally created using Cloud Builder; it cannot be used to upgrade deployments that were installed manually.

Reference Source: ArcGIS Enterprise documentation on upgrading manually installed deployments

### NEW QUESTION # 17

Users are reporting service timeouts and performance issues. The administrator notices that only the minimum number of instances are running during performance spikes. They want to monitor usage trends before adjusting instance settings.

Which action should the administrator perform?

- A. Change the log level to Debug in ArcGIS Server Manager
- B. Enable Windows Performance Monitor
- C. Monitor Task Manager on each ArcGIS Server machine
- **D. Create a report of server statistics in ArcGIS Server Manager**

**Answer: D**

Explanation:

To monitor usage patterns, including the number of requests and instances in use, ArcGIS Server provides statistics reports in Server Manager. These reports show peak and average service usage, helping administrators decide how to scale service instance counts.

From ArcGIS Server documentation:

"Use the ArcGIS Server Manager statistics reporting tool to monitor service usage trends over time. This data helps inform adjustments to instance counts."

\* Option A gives only raw system metrics, not service-specific insights.

\* Option B (Debug logs) causes overhead and isn't appropriate for monitoring trends.

Reference: ArcGIS Server - Monitoring and Reporting Service Usage Statistics

### NEW QUESTION # 18

A GIS administrator uses a data connection file (SDE file) for a Microsoft SQL Server database to add a user-maintained data store item to Portal for ArcGIS.

Now, the administrator must ensure that five users can access the data store item to publish to federated servers. The administrator shares the SDE file with coworkers.

Which additional step must be taken?

- A. Give the coworkers a custom administrator role
- B. Set the data store to public access
- **C. Share the portal item to a group of the coworkers**
- D. Upload the SDE file in Server Manager

**Answer: C**

Explanation:

In ArcGIS Enterprise, data store items added via the Portal (such as those using .sde files for SQL Server) are represented as portal items. To allow other users to publish using that data store, the administrator must share the item with them, typically via a group.

From the official documentation:

"To allow other users to publish with a user-maintained data store, share the item with a group to which they belong. Users must

have access to the data store item in the portal to publish services using it."

\* OptionA is not required-users don't need admin rights to publish.

\* OptionC refers to registering data in Server Manager, not managing access.

\* OptionDis not a valid setting for data store items.

Reference:ArcGIS Enterprise -Sharing Data Store Items for Publishing

### NEW QUESTION # 19

A GIS administrator is analyzing the usage statistics of ArcGIS Enterprise. The administrator needs to pull tabular statistics on various groups and users about the type of content that they produce and consume.

Which action should the administrator perform?

- A. Open ArcGIS Server statistics to create a report for commonly used items.
- **B. Run usage reports in Portal for ArcGIS to determine the effect on the organization.**
- C. Use ArcGIS Monitor to capture desired information over a period of time in a report.

**Answer: B**

Explanation:

Portal for ArcGIS provides built-in usage reports that allow administrators to monitor how members are using, sharing, and contributing resources. These reports offer insights into content creation, usage patterns, and group activities. Administrators can generate and export these reports in tabular formats for further analysis.

ArcGIS Server statistics focus on service-level metrics and do not provide detailed user or group content statistics. ArcGIS Monitor captures system performance metrics but is not designed for detailed content usage analysis by users or groups.

Reference Source:ArcGIS Enterprise documentation on usage reports in Portal for ArcGIS.

### NEW QUESTION # 20

A client has an internet-accessible ArcGIS Enterprise deployment with the Web Adaptors in the DMZ, and the remaining components are on an internal network behind a firewall. A user on the internet must access a web map in that environment.

Which ports must be open in the firewall between the DMZ and the internal network?

- A. 6443 and 7443
- **B. 80 and 443**
- C. 2443 and 6443
- D. 443 and 6443

**Answer: B**
