Oracle Data Platform 2025 Foundations Associate Sample Questions (Q16-Q21):

NEW QUESTION # 16

What three typical data types/models are covered by Oracle's Converged Database?

- A. Graph
- B. Events
- C. Relational
- D. Spatial
- E. Terraform

Answer: A,C,D

Explanation:

Oracle's "Converged Database" supports multiple data types/models, including "Spatial" (B) for geospatial data, "Graph" (D) for relationship analytics, and "Relational" (E) for traditional structured data. "Events" (A) is not a distinct data model but a use case, and "Terraform" (C) is an infrastructure tool, not a data type. Oracle's documentation lists Spatial, Graph, and Relational among others (e.g., JSON, XML) as core converged capabilities.

NEW QUESTION # 17

What is a prerequisite of running APEX on an Autonomous Database?

- A. DBA must create APEX admin and APEX users first before starting APEX from Oracle Cloud Infrastructure Console
- B. An Autonomous Database with the workload type Data Warehouse, Transaction Processing, JSON, or APEX
- C. A DBA must enable ORDS first
- D. APEX can only be used when selecting APEX as a workload when provisioning an Autonomous Database

Answer: B

Explanation:

A prerequisite for running "APEX" (Application Express) on an Autonomous Database is provisioning "an Autonomous Database with the workload type Data Warehouse, Transaction Processing, JSON, or APEX" (B). APEX is supported across these workload types, with ORDS (Oracle REST Data Services) pre-enabled. Option A is incorrect, as ORDS is automatically configured. Option C is too restrictive, as APEX isn't limited to the APEX workload type alone. Option D is unnecessary, as user creation follows provisioning, not precedes it. Oracle's Autonomous Database documentation confirms APEX availability across these workload types with no manual ORDS setup required.

NEW QUESTION # 18

Which are the capabilities of Oracle Autonomous Database that can accelerate innovation? (Choose 3)

- A. Instant scaling of storage
- B. Scaling of CPUs with very little downtime
- C. Built-in AI and ML helps find patterns that could identify undiscovered anomalies
- D. Provisions a data warehouse in seconds

Answer: A,B,C

Explanation:

"Oracle Autonomous Database" accelerates innovation with: "Scaling of CPUs with very little downtime" (A), enabling dynamic performance adjustments online; "Built-in AI and ML helps find patterns that could identify undiscovered anomalies" (B), leveraging in-database machine learning; and "Instant scaling of storage" (C), providing flexibility without interruption. "Provisions a data warehouse in seconds" (D) is true but more a setup feature than an ongoing innovation driver. Oracle's documentation emphasizes these capabilities for rapid development and insights.

NEW QUESTION # 19

Which two are true about the Autonomous JSON Database?

- A. A DBA is required
- B. Applications cannot be built without SQL
- C. Instant auto-scaling
- D. Accessed via document APIs

Answer: C,D

Explanation:

The "Autonomous JSON Database" is "Accessed via document APIs" (A), such as SODA, for NoSQL-style operations, and offers "Instant auto-scaling" (D) for compute and storage with no downtime. "Applications cannot be built without SQL" (B) is false, as document APIs suffice, and "A DBA is required" (C) is incorrect due to its self-managing nature. Oracle's documentation highlights these autonomous and API-driven features.

NEW QUESTION # 20

A customer wants to use Oracle Cloud Infrastructure (OCI) for storing application backups which can be stored for months, but retrieved immediately based on business needs. Which OCI storage service can be used to meet this requirement?

- A. Archive Storage
- B. Block Volume
- C. File Storage
- D. Object Storage (standard)

Answer: D

Explanation:

For storing application backups that need to be "stored for months, but retrieved immediately," "Object Storage (standard)" (A) is the suitable OCI service. Standard Object Storage offers durable, scalable storage with immediate access, ideal for backups requiring quick retrieval. "Archive Storage" (B) is cheaper but has retrieval delays, unsuitable for immediate access. "File Storage" (C) is for shared file systems, and "Block Volume" (D) is for high-performance attached storage, both less suited for long-term backups. Oracle's OCI Storage documentation confirms Standard Object Storage for this use case.
