

# 100% Pass Reliable Juniper - New JN0-481 Test Syllabus

2026 Latest CertkingdomPDF JN0-481 PDF Dumps and JN0-481 Exam Engine Free Share: <https://drive.google.com/open?id=1XMC9JnjlnNxpMqvVHZi9wcijh2rJqlTN>

CertkingdomPDF Juniper JN0-481 exam training materials have the best price value. Compared to many others training materials, CertkingdomPDF's Juniper JN0-481 exam training materials are the best. If you need IT exam training materials, if you do not choose CertkingdomPDF's Juniper JN0-481 Exam Training materials, you will regret forever. Select CertkingdomPDF's Juniper JN0-481 exam training materials, you will benefit from it last a lifetime.

We invited a large group of professional experts who dedicated in this JN0-481 training guide for more than ten years. To improve the accuracy of the JN0-481 guide preparations, they keep up with the trend closely. Every page is carefully arranged by them with high efficiency and high quality. Up to now, there are three versions of JN0-481 Exam Materials for your choice. So high-quality contents and flexible choices of JN0-481 learning mode will bring about the excellent learning experience for you.

## JN0-481 Reliable Exam Voucher - JN0-481 Prep Guide

As the feedbacks from our worthy customers praised that our JN0-481 exam braindumps are having a good quality that the content of our JN0-481 learning quiz is easy to be understood. About some esoteric points, our experts illustrate with examples for you. Our JN0-481 learning quiz is the accumulation of professional knowledge worthy practicing and remembering, so you will not regret choosing our JN0-481 study guide.

## Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q12-Q17):

### NEW QUESTION # 12

Which attribute enables Juniper Apstra to scale and manage thousands of devices with a single server instance?

- A. Apstra is installed as a cloud resource.
- B. Apstra is available as an OVA.
- C. **Apstra is a distributed state system**
- D. Apstra is based on NGINX.

**Answer: C**

Explanation:

The attribute that enables Juniper Apstra to scale and manage thousands of devices with a single server instance is that Apstra is a distributed state system. This means that Apstra uses a graph database to store the network topology and configuration data in a distributed and replicated manner across multiple server nodes. This allows Apstra to handle large-scale networks with high performance, reliability, and availability. Apstra also uses a stateful orchestration engine that ensures the network state is always consistent with the intent of the blueprint, which is the logical representation of the network design and behavior. Apstra can automatically detect and resolve any discrepancies between the desired and actual network state, as well as handle any changes or failures in the network.

**NEW QUESTION # 13**

Which statement is true when onboarding a Juniper Networks device using a Juniper Apstra ZTP server?

- A. The Hostname will be the serial-number of the device.
- B. The Management IP address cannot be predetermined.
- C. The Device Key to be used can be set in the dhcpcd.conf file on the ZTP server.
- D. The State can be set in the ztp.json file on the ZTP server.

**Answer: D**

Explanation:

The ztp.json file on the Apstra ZTP server contains the configuration parameters for each device that is onboarded using ZTP. One of the parameters is the State, which can be one of the following values: init, ready, in\_progress, done, error, or disabled. The State indicates the current status of the device in the ZTP process. For example, if the State is ready, it means that the device is ready to be onboarded by the Apstra ZTP server. If the State is done, it means that the device has completed the ZTP process and is managed by the Apstra server. The State can be manually set or changed in the ztp.json file to control the behavior of the device during ZTP.

**NEW QUESTION # 14**

What does EVPN use to identify which remote leaf device advertised the EVPN route?

- A. a VRF target value
- B. a community tag
- C. a route target value
- D. a route distinguisher value

**Answer: D**

Explanation:

EVPN uses a route distinguisher (RD) value to identify which remote leaf device advertised the EVPN route. An RD is a 64-bit value that is prepended to the EVPN NLRI to create a unique VPNv4 or Vpnv6 prefix. The RD value is usually derived from the IP address of the PE that originates the EVPN route. By comparing the RD values of different EVPN routes, a PE can determine which remote PE advertised the route and which VRF the route belongs to.

**NEW QUESTION # 15**

You are building an IP fabric and have decided to use Junos devices to create an EBGP underlay. You must ensure that traffic is load balanced throughout your fabric.

You must also ensure that regardless of the path used through the fabric that all traffic is handled consistently and load balanced predictably.

According to Juniper Networks, what are three best practices that you should employ to help you achieve the desired behavior? (Choose three.)

- A. Leaf devices should use a variety of link speeds for each uplink to the spine devices.
- B. Each leaf device must use the same link speed for all uplinks to the spine devices.
- C. Each leaf device should be a different model including linecards and port density.
- D. All leaf devices should be the same model including linecards and port density.
- E. All spine devices should be the same model including linecards and port density.

**Answer: B,D,E**

#### **NEW QUESTION # 16**

Using the Juniper Astra multitenancy capabilities, which approach will allow a tenant to interconnect two different routing zones?

- A. Interconnection cannot be enabled.
- **B. Use interconnection through an external gateway.**
- C. Use interconnection through the fabric spine nodes.
- D. Interconnection is the default behavior.

**Answer: B**

Explanation:

A routing zone is an L3 domain, the unit of tenancy in multi-tenant networks. You create routing zones for tenants to isolate their IP traffic from one another, thus enabling tenants to re-use IP subnets. In addition to being in its own VRF, each routing zone can be assigned its own DHCP relay server and external system connections. You can create one or more virtual networks within a routing zone, which means a tenant can stretch its L2 applications across multiple racks within its routing zone. For virtual networks with Layer 3 SVI, the SVI is associated with a Virtual Routing and Forwarding (VRF) instance for each routing zone isolating the virtual network SVI from other virtual network SVIs in other routing zones. If you're using multiple routing zones, external system connections must be from leaf switches in the fabric. Routing between routing zones must be accomplished with external systems.

#### **NEW QUESTION # 17**

.....

You don't need to install any separate software or plugin to use it on your system to practice for your actual Data Center, Specialist (JNCIS-DC) (JN0-481) exam. Juniper web-based practice software is supported by all well-known browsers like Chrome, Firefox, Opera, Internet Explorer, etc.
