Topic 3	<ul style="list-style-type: none"><li>Acceptance Criteria, Acceptance Tests and Experience-Based Practices: This topic includes writing acceptance criteria, designing acceptance tests, and utilizing experience-based approaches for effective acceptance testing.</li></ul>

Topic 4	<ul style="list-style-type: none"> <li>Introduction and Foundations: This topic covers fundamental relationships in software development and business analysis, along with the principles of acceptance testing.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Acceptance Testing for Non-Functional Requirements: This topic explores testing non-functional requirements such as usability, performance efficiency, and security, emphasizing quality in use and user experience.</li> </ul>

## ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q26-Q31):

### NEW QUESTION # 26

Which one of the following statements describes the collaboration between business analysts and testers BEST?

- A. Business analysts collaborate on test planning and risk analysis to ensure that further on, appropriate test cases are developed and prioritized.
- B. Testers participate in identifying business needs of stakeholders to better understand the business needs and related requirements.
- C. Once the requirements and acceptance criteria have been defined, business analysts are no longer involved in testing activities.
- D. Business analysts usually cannot review acceptance tests, because they do not understand the technical details.

**Answer: A**

### NEW QUESTION # 27

Which one of the following statements about the relation between business goals, business needs and requirements is true?

- A. Business requirements are generally developed by refining product requirements.vhbj
- B. Business goals, business needs and requirements describe, at different levels of abstraction, what shall be achieved
- C. Business goals can be extracted from product requirements
- D. Once the business requirements are elicited, business analysts start to formalize business goals for the project.

**Answer: B**

Explanation:

The relationship between business goals, business needs, and requirements is hierarchical and reflects increasing levels of specificity:  
Business Goals: High-level strategic objectives.

Business Needs: Problems or opportunities that must be addressed to achieve those goals.

Requirements: Specific capabilities or conditions the system must satisfy to meet the needs.

Option B is correct because it accurately describes how these elements relate at different abstraction levels in the requirements hierarchy. This relationship is fundamental to business analysis and accepted by standards like BABOK and ISTQB.

Other options:

A is reversed - business goals usually precede and drive the elicitation of requirements.

C and D misrepresent the sequence - product requirements are derived from business goals and needs, not the other way around.

B). Business goals, business needs and requirements describe, at different levels of abstraction, what shall be achieved

### NEW QUESTION # 28

Which of the following information is most likely part of an acceptance test summary report?

- A. Information to evaluate the level of risk for product release.
- B. Test procedure information.
- C. Test strategy and test design methods.
- D. Technical details on defect fixes.

**Answer: A**

### NEW QUESTION # 29

Suppose you are testing a new professional exam support system. As input the system takes two grades from two exams. For each exam the possible grade is 0 or 1 point. As output the system returns a single string - the decision about the entitlements: if the total score is 2, the candidate receives full entitlements. If the total score is 1, she receives partial entitlements. If the total score is 0, the candidate fails and receives no entitlements.

Which of the following is the correct Decision Model and Notation (DMN) model for this situation?

.....

- A. Option D
- B. Option C
- C. Option A
- D. Option B

**Answer: A**

Explanation:

Decision Model and Notation (DMN) is a standardized approach used to model decision logic, often represented in decision tables that evaluate inputs and determine outputs. In this scenario, the entitlements granted to a candidate are based on the total score from two exams, where:

Each exam can be graded as either 0 or 1.

The combined score can be 0, 1, or 2.

The entitlements depend on the combined result:

0 # No entitlements

1 # Partial entitlements

2 # Full entitlements

Among the given diagrams:

Option A simply lists test cases but lacks explicit logic modeling.

Option B shows a mapping from total score to entitlements but doesn't model how the total is derived from the two exams.

Option C redundantly splits outputs into multiple Boolean fields and doesn't reflect how the decision is made from exam inputs.

Option D is the correct representation.

Option D uses:

e1 and e2 as inputs for Exam #1 and Exam #2.

Result as the sum of e1 + e2.

A final Output mapped based on the Result:

0 # No

1 # Partial

2 # Full

This structure accurately follows the DMN standard by expressing inputs, a derived result, and the corresponding decision output, making Option D the correct and most complete decision model.

Exact Reference - ISTQB CTFL Acceptance Testing Syllabus (Section 2.3):

"Decision tables are commonly used to express business rules that determine outputs based on combinations of inputs. DMN formalizes this structure to support automated reasoning."

### NEW QUESTION # 30

Which one of the following sentences describes BEST a major advantage when business analysts and testers review the acceptance criteria together?

- A. The review of acceptance criteria helps to verify that acceptance test cases cover business processes, business rules and business risks.
- B. A shared vision between the business analyst and the tester on acceptance criteria facilitates the design of acceptance test cases.
- C. A joint review ensures that non-functional quality criteria are taken into account.
- D. The review of acceptance criteria is a good practice to improve the quality of test reports.

**Answer: B**
