CompTIA A+ Certification Exam: Core 2 Sample Questions (Q190-Q195):

NEW QUESTION # 190

A malicious actor uses multiple endpoints to target a single endpoint. Which of the following describes this threat?

- A. On-path attack
- B. Structured Query Language injection
- C. Brute-force attack
- **D. Distributed Denial of Service**

Answer: D

Explanation:

Using many separate systems (endpoints) to attack one target is the defining characteristic of a Distributed Denial of Service (DDoS) attack. Mike Meyers' Lab Manual defines DDoS as: "An attack on a computer or network device in which multiple computers send data and requests to the device in an attempt to overwhelm it so that it cannot perform normal operations." That description exactly matches the scenario: many endpoints are coordinated to flood one endpoint, preventing legitimate use.

This is different from an on-path (man-in-the-middle) attack, which intercepts traffic between two parties; SQL injection, which targets databases via malicious input; and brute-force attacks, which attempt repeated authentication guesses. The key clue is multiple endpoints working together, which implies distribution (often via botnets) and service disruption by volume. That is why the correct classification is Distributed Denial of Service (D).

NEW QUESTION # 191

Which of the following filesystem types does the Linux OS use?

- A. NTFS
- **B. ext4**
- C. APFS
- D. exFAT

Answer: B

Explanation:

The ext4 (Fourth Extended Filesystem) is the most widely used default filesystem in modern Linux distributions. It is designed for high performance, scalability, and reliability, and is supported by all mainstream Linux kernels.

A). exFAT is used for cross-platform external drives, not native Linux systems.

B). APFS is Apple's proprietary filesystem for macOS and iOS.

D). NTFS is the default filesystem for Windows, not Linux.

NEW QUESTION # 192

A customer is explaining issues with a workstation to a technician. While the customer is listing the issues, the technician is browsing social media on a smartphone. Which of the following professionalism and communication techniques should the technician be using in this situation?

(Choose two.)

- A. Clarify customer statements.
- **B. Avoid personal interruptions.**
- C. Maintain professional attire.
- D. Provide proper documentation.
- **E. Actively listen and take notes.**
- F. Follow up with the customer.

Answer: B,E

Explanation:

Avoiding personal interruptions ensures the technician gives full attention to the customer.

Actively listening and taking notes demonstrates respect and helps accurately address the customer's issues.

NEW QUESTION # 193

Which of the following methods is a way to superficially delete files on a hard drive?

- A. Drilling
- B. Degaussing
- C. Wiping
- D. Shredding
- E. Low-level formatting

Answer: E

Explanation:

"Superficially delete" in this context means removing data without physically destroying the drive-i.e., using a logical/sanitization method rather than a destruction method. Drilling and shredding are explicit physical destruction techniques that render a drive unusable, while degaussing is a purging/destruction-style method that disrupts magnetic fields and also makes the drive unreliable for future use. The remaining choices (wiping and low-level formatting) are software-based sanitization approaches. In A+ terminology, a low-level format is contrasted with a standard format and is commonly associated with a complete overwrite/zero-fill process that clears the disk so data does not remain recoverable, while still leaving the drive functional afterward. The All-in-One guide notes that modern "low-level formatting" is often used to describe a zero-fill

/overwrite operation that writes zeros to every location on the drive. It also distinguishes this from normal deletion, where data can remain until overwritten. Likewise, Docter differentiates formatting vs sanitation vs destruction, emphasizing that sanitation (including low-level formats/wipes) removes data without tossing media for "prying eyes."

NEW QUESTION # 194

A user wants to dispose of a failed hard drive in a way that ensures the data is unrecoverable. Which of the following is the best at-home method?

- A. Drilling
- B. Degaussing
- C. Standard formatting
- D. Low-level formatting
- E. Shredding

Answer: E

Explanation:

Shredding physically destroys the platters, making data recovery virtually impossible. It's more effective and accessible than degaussing or low-level formatting.

From Quentin Docter - CompTIA A+ Complete Study Guide:

"Physical destruction methods like shredding are the most secure options for ensuring data on failed drives cannot be recovered."
