Palo Alto Networks Cybersecurity Practitioner Sample Questions (Q165-Q170):

NEW QUESTION # 165

Match the DNS record type to its function within DNS.

Answer:

Explanation:

NEW QUESTION # 166

Which capability does Cloud Security Posture Management (CSPM) provide for threat detection within Prisma Cloud?

- A. Integration with threat feeds
- B. Real-time protection from threats
- C. Alerts for new code introduction
- D. Continuous monitoring of resources

Answer: D

Explanation:

Cloud Security Posture Management (CSPM), including Prisma Cloud's offering, continuously monitors all cloud resources - such as compute instances, storage, network configurations, and identities - to detect misconfigurations, vulnerabilities, and potential threats in near real time.

NEW QUESTION # 167

Which statement describes the process of application allow listing?

- A. It allows safe use of applications by scanning files for malware.
- B. It creates a set of specific applications that do not run on the system.
- C. It encrypts application data to protect the system from external threats.
- D. It allows only trusted files, applications, and processes to run.

Answer: D

Explanation:

Application allow listing is a security practice that permits only pre-approved (trusted) applications, files, and processes to run on a system. This approach helps prevent unauthorized or malicious software from executing, thereby reducing the attack surface.

NEW QUESTION # 168

Which type of attack involves sending data packets disguised as queries to a remote server, which then sends the data back to the attacker?

- A. DDoS
- B. Command-and-control (C2)
- C. DNS tunneling
- D. Port evasion

Answer: C

Explanation:

DNS tunneling is an attack technique where data packets are disguised as DNS queries and sent to a remote server. That server, often under the attacker's control, responds with additional data or instructions, effectively creating a covert command-and-control (C2) channel over DNS.

NEW QUESTION # 169

What type of attack redirects the traffic of a legitimate website to a fake website?

- A. Whaling
- **B. Pharming**
- C. Watering hole
- D. Spear phishing

Answer: B

Explanation:

Pharming is an attack that redirects traffic from a legitimate website to a malicious fake website, typically by corrupting the DNS system or modifying host files, with the intent of stealing user credentials or sensitive data.

NEW QUESTION # 170

.....

PassTestking has been to make the greatest efforts to provide the best and most convenient service for our candidates. High speed and high efficiency are certainly the most important points. In today's society, high efficiency is hot topic everywhere. So we designed training materials which have high efficiency for the majority of candidates. It allows candidates to grasp the knowledge quickly, and achieved excellent results in the exam. PassTestking's Palo Alto Networks Cybersecurity-Practitioner Exam Training materials can help you to save a lot of time and effort. You can also use the extra time and effort to earn more money.
