The software also sets up time and mock examination functions. You can set a timer for simulation tests to help you complete our ACA-100 Practice in an effective time, which will help you adjust the speed and vigilance in real exams.

Appian Certified Analyst Sample Questions (Q43-Q48):

NEW QUESTION # 43

In Appian, what is the purpose of a process model?

- A. To create a database schema
- **B. To automate business workflows by defining sequences of tasks**
- C. To define the look and feel of the user interface
- D. To manage user permissions within the application

Answer: B

NEW QUESTION # 44

Improvements are being considered for an Expense Process, and you have been asked to capture that there is now an approval task

sent to the finance manager.

As part of the approval, the process should also reflect that if the payment has not been authorized within 48 hours, a reminder message is sent to the finance manager to inform them they have an outstanding task.

Which Business Process Model and Notation (BPMN) notation type would you use to illustrate the reminder message?

- A. Start event
- B. Data object
- C. Gateway
- **D. Intermediate event**

Answer: D

Explanation:

In BPMN, an intermediate event is used to indicate events that occur between the start and end of a process. To model a reminder message that is sent if the payment is not authorized within 48 hours, an intermediate event, specifically a timer intermediate event, is the appropriate notation.

Intermediate Event Overview:

An intermediate event can be used to model actions such as delays, triggers, or messages that happen during the course of a process.

A timer intermediate event would be used to trigger the reminder after a set period (in this case, 48 hours).

Why Not Other Options?:

- A . Data Object: Represents data stored or used by the process, not an event or action.
- B . Gateway: Used for decision points or branching paths, not for triggering events.
- D . Start Event: Marks the beginning of a process and cannot be used mid-process.

References:

Appian Documentation on BPMN Events: BPMN Events

Using an intermediate event ensures that the process can trigger the reminder at the right time, enhancing process automation and efficiency.

NEW QUESTION # 45

A given user story has a description and an acceptance criterion.

Which two other things are needed to mark the story as ready?

- **A. Estimation**
- B. Sprint number
- **C. Priority**
- D. Developer assignment

Answer: A,C

NEW QUESTION # 46

Which is an accurate statement about application security?

- **A. Every user must have an account created in Appian in order to develop, administer, and/or access an Appian application.**
- B. Any user can develop and access an Appian application without an account. However, deployments cannot be done without an account.
- C. Admins require an account in Appian to use the Admin Console, while all other basic user actions can be done without an account.
- D. Developers require an account in Appian, while any users can access an Appian application without an account.

Answer: A

Explanation:

In Appian, every user who needs to interact with the platform, whether for development, administration, or accessing applications, must have an account. This is a fundamental security measure to ensure that only authorized users can interact with the system.

Appian Security Overview:

Each user account in Appian has specific permissions based on roles, ensuring that users can only access what they are authorized to.

This applies to all levels of interaction, from basic users to administrators and developers.

Why Not Other Options?:

A . Incorrect, as even basic users require accounts to access applications.

C and D . Incorrect, as they suggest that certain actions can be performed without an account, which is not the case.

References:

Appian Security Guide: User Management and Security

Ensuring that all users have accounts is a critical aspect of maintaining security and control within the Appian environment.

NEW QUESTION # 47

Which three use cases are best suited for implementation with Appian?

- A. A use case that can be developed and run offline only
- B. A use case that requires integrations with different systems
- C. A use case that requires reporting and displaying graphs
- D. A use case that requires the editing of documents without third-party integration
- E. A use case that requires multiple approval workflows

Answer: B,C,E

Explanation:

A use case that requires integrations with different systems (A): Appian is designed to integrate seamlessly with various external systems, making it suitable for use cases that involve data exchange or communication between multiple systems. This capability allows for the creation of comprehensive and connected business processes within a single platform.Appian Integration Capabilities

A use case that requires multiple approval workflows (C): Appian excels in automating and managing complex business workflows, including those that require multiple layers of approval. Its workflow engine supports the orchestration of tasks, ensuring that the right people are involved in the process at the right time.Appian Workflow Automation

A use case that requires reporting and displaying graphs (E): Appian provides robust reporting and analytics capabilities, allowing users to create detailed reports and visualizations. This makes it an ideal choice for use cases where data needs to be reported and visualized effectively.Appian Reporting and Analytics
