## Questions (Q61-Q66):

### NEW QUESTION # 61

Which NetApp tool has the capability to learn, recommend, and apply Performance Service Levels on multiple clusters?

- A. ONTAP System Manager
- B. BlueXP classification
- C. BlueXP observability
- D. Active IQ Unified Manager

**Answer: C**

### NEW QUESTION # 62

On which parameter is the NetApp BlueXP observability pricing model based?

- A. number of managed units
- B. frequency of metric ingestion
- C. number of logging intervals
- D. capacity of metrics that are ingested

**Answer: D**

Explanation:

NetApp BlueXP, which is a suite of cloud-based services, typically uses a pricing model that focuses on the amount of data processed or managed, rather than the number of log entries, the frequency of metric ingestion, or the number of managed units. In the context of observability and monitoring services, this often translates to pricing based on the volume or capacity of metrics ingested into the system for analysis and monitoring purposes.

This approach aligns with common practices in cloud service pricing, where the emphasis is on the resources consumed (in this case, the data capacity) rather than the frequency of operations or the count of monitored entities.

So, option C is the most likely correct answer for the pricing model of NetApp BlueXP's observability services.
