

Quiz High Pass-Rate 2V0-13.25 - VMware Cloud Foundation 9.0 Architect Certified Questions

P.S. Free & New 2V0-13.25 dumps are available on Google Drive shared by VCEEngine: <https://drive.google.com/open?id=1n10-WxZYMgaj6UqHgjDYq3NePyGZRLU7>

The price for 2V0-13.25 exam torrent is reasonable, and no matter you are a student at school or an employee in the company, you can afford the expense. What's more, 2V0-13.25 exam braindumps are high quality, and they can help you pass the exam just one time. We also pass guarantee and money back guarantee, and if you fail to pass the exam, we will give you refund. You can receive the download link and password for 2V0-13.25 Training Materials within ten minutes, so that you can start your learning as quickly as possible. We provide you with free demo for one year, and our system will send the update version for 2V0-13.25 training materials to you automatically.

The software version is one of the three versions of our 2V0-13.25 actual exam, which is designed by the experts from our company. The functions of the software version are very special. For example, the software version can simulate the real exam environment. If you buy our 2V0-13.25 study questions, you can enjoy the similar real exam environment. So do not hesitate and buy our 2V0-13.25 preparation exam, you will benefit a lot from our products.

>> 2V0-13.25 Certified Questions <<

Get Valid 2V0-13.25 Certified Questions and Excellent 2V0-13.25 Valid Exam Format

Since the content of the examination is also updating daily, you will need real and latest VMware 2V0-13.25 Dumps to prepare successfully for the 2V0-13.25 Certification Exam in a short time. People who don't study from updated 2V0-13.25 questions fail the examination and loss time and money.

VMware Cloud Foundation 9.0 Architect Sample Questions (Q18-Q23):

NEW QUESTION # 18

An architect is designing a VMware Cloud Foundation (VCF)-based private cloud solution for a customer that will include two physical locations. The customer has stated the following requirement:

All management tooling must be resilient at the component level within a single site.

When considering the design decisions for VMware Aria Suite components, what should the Architect document to meet the stated requirement?

- A. The solution will deploy Aria Suite Lifecycle Manager in a high availability configuration.
- B. The solution will implement an external load balancer for Aria Operations Cloud Proxies.
- C. The solution will configure the VCF Workload domain in a stretched topology across two locations.
- **D. The solution will deploy three Aria Automation appliances in a clustered configuration.**

Answer: D

Explanation:

The requirement specifies that management tooling must be resilient at the component level within a single site, meaning each site's management components (e.g., VMware Aria Suite) must withstand individual failures without relying on the other site. Let's evaluate each option in the context of VCF 5.2 and Aria Suite:

Option A: The solution will implement an external load balancer for Aria Operations Cloud Proxies. Aria Operations Cloud Proxies collect data for monitoring and don't inherently require an external load balancer for resiliency within a site. The VMware Aria Operations Administration Guide indicates that proxies are lightweight and typically deployed per cluster, with resiliency achieved via multiple proxies, not load balancing. This doesn't directly address component-level resiliency for the broader Aria Suite management tools.

Option B: The solution will configure the VCF Workload domain in a stretched topology across two locations. A stretched topology extends a workload domain across two sites for site-level resiliency (e.g., disaster recovery), not component-level resiliency within a single site. The VCF 5.2 Architectural Guide notes that stretched clusters rely on cross-site failover, which contradicts the requirement for single-site resilience, making this irrelevant to management tooling within one site.

Option C: The solution will deploy three Aria Automation appliances in a clustered configuration. VMware Aria Automation (formerly vRealize Automation) supports a clustered deployment with three appliances (primary, replica, and failover) to ensure high availability within a site. The VMware Aria Automation Installation Guide confirms that this configuration provides component-level resiliency by allowing the cluster to tolerate individual appliance failures without service disruption. In VCF, Aria Automation is a key management tool, and this design meets the requirement for single-site resilience.

Option D: The solution will deploy Aria Suite Lifecycle Manager in a high availability configuration. Aria Suite Lifecycle Manager (LCM) manages the lifecycle of Aria components but isn't deployed in a clustered HA configuration itself in VCF 5.2—it's a single appliance with backup/restore options. The VCF 5.2 Administration Guide notes that LCM resiliency is typically achieved via infrastructure HA (e.g., vSphere HA), not native clustering, making this less directly aligned with component-level resiliency compared to Aria Automation clustering.

Conclusion:

Option C best meets the requirement by ensuring Aria Automation, a critical management tool, is resilient at the component level within a single site through clustering, aligning with VCF and Aria Suite best practices.

NEW QUESTION # 19

An architect is responsible for designing a VMware Cloud Foundation (VCF)-based private cloud. During the design requirements gathering workshop, the following information was captured:

* The solution must capture events from all infrastructure components of the VCF fleet.

* The solution must provide a single pane of glass management interface for troubleshooting, alerting, and monitoring using metrics, events, and flows.

* The solution must meet a 99.9% Service Level Agreement for Availability.

Which three design decisions should the architect make to meet the stated requirements? (Choose three.)

- A. Configure the integration for VCF Operations and VCF Automation.
- B. Deploy VCF Operations for logs in a High Availability model.
- C. Configure the integration for VCF Operations and VCF Operations for logs.
- D. Deploy VCF Operations for logs in a Simple model.
- E. Configure VCF Operations for logs to capture events from only VCF Management components.
- F. Configure VCF Operations for logs to capture events from all VCF infrastructure components.

Answer: A,B,C

Explanation:

The VMware Cloud Foundation 9.0.1 Architecture Overview and Operations Integration Guide state that VCF Operations, combined with VCF Operations for Logs, provides a unified monitoring and observability solution across the entire VCF fleet. The documentation specifies:

"Integrating VCF Operations with VCF Operations for Logs and VCF Automation provides a single-pane-of-glass for monitoring metrics, events, and flows across all management and workload domains." Furthermore, the High Availability deployment model for VCF Operations for Logs is required to meet the

99.9% SLA for continuous availability of monitoring data.

"VCF Operations for Logs can be deployed in High Availability mode to ensure log continuity and fault tolerance." Thus, the architect must:

* Integrate VCF Operations with both Logs and Automation (B, D) for unified visibility.

* Deploy Logs in High Availability (F) mode to achieve the 99.9% availability SLA.

NEW QUESTION # 20

An architect is designing a new VMware Cloud Foundation (VCF)-based Private Cloud solution.

During the requirements gathering workshop, a stakeholder from the network team stated that:

The solution must ensure that any physical networking component is redundant to N+N.

The solution must ensure inter-datacenter network links are diversely routed.

When writing the design documentation, how should the architect classify the stated requirement?

- A. Manageability
- **B. Availability**
- C. Performance
- D. Recoverability

Answer: B

Explanation:

In VMware Cloud Foundation (VCF) 5.2, design qualities (non-functional requirements) categorize how the system operates. The network team's requirements focus on redundancy and routing diversity, which the architect must classify.

Let's evaluate:

Option A: Availability

This is correct. Availability ensures the solution remains operational and accessible. "N+N redundancy" (e.g., dual active components where N failures are tolerated by N spares) for physical networking components eliminates single points of failure, ensuring continuous network uptime. "Diversely routed inter-datacenter links" prevents outages from a single path failure, enhancing availability across sites. In VCF, these align with high-availability network design (e.g., NSX Edge uplink redundancy), making availability the proper classification.

Option B: Performance

Performance addresses speed, throughput, or latency (e.g., "10 Gbps links"). Redundancy and diverse routing might indirectly support performance by avoiding bottlenecks, but the primary intent is uptime, not speed. This doesn't fit the stated requirements' focus.

Option C: Recoverability

Recoverability focuses on restoring service after a failure (e.g., backups, failover time). N+N redundancy and diverse routing prevent downtime rather than recover from it. While related, the requirements emphasize proactive uptime (availability) over post-failure recovery, making this incorrect.

Option D: Manageability

Manageability concerns ease of administration (e.g., monitoring, configuration). Redundancy and routing diversity are infrastructure design choices, not management processes. This quality doesn't apply.

Conclusion:

The architect should classify the requirement as Availability (A). It ensures the VCF solution's network remains operational, aligning with VCF 5.2's focus on resilient design.

NEW QUESTION # 21

What is the primary purpose of VMware's Distributed Resource Scheduler (DRS)?

- **A. Optimize resource allocation**
- B. Configure storage policies
- C. Enable high availability
- D. Monitor VM performance

Answer: A

Explanation:

DRS optimizes resource allocation across cluster hosts.

NEW QUESTION # 22

How can Broadcom Fibre Channel adapters improve VMware storage performance?

- A. Check for proper zoning configuration
- B. Enable multi-pathing for redundancy
- C. Decrease storage I/O requirements
- D. Use high-performance Fibre Channel HBAs

Answer: A,B,D

Explanation:

Multi-pathing, zoning, and high-performance HBAs help optimize VMware storage performance with Fibre Channel adapters.

NEW QUESTION # 23

.....

Checking our 2V0-13.25 free demo is a great way of learning the pattern of exam materials and if it suits what you wanted. There are valid 2V0-13.25 test questions and accurate answers along with the professional explanations in our study guide. All real questions just need to practice one or two days and remember the answers will save you much time in 2V0-13.25 Real Exam. Come and join us.

2V0-13.25 Valid Exam Format: <https://www.vceengine.com/2V0-13.25-vce-test-engine.html>

2V0-13.25 certificates are playing an increasingly important part in society today, Therefore, buying our 2V0-13.25 actual study guide will surprise you with high grades and you are more likely to get the certification easily, VMware 2V0-13.25 Certified Questions Our clients come from all around the world and our company sends the products to them quickly, VMware 2V0-13.25 Certified Questions In the cloud era, the hardware obstacle has been removed.

The client developer does not have to code the routines that implement 2V0-13.25 business rules or access databases, Initiating a command with a specific word or phrase will tell Siri which app to utilize.
