#### NEW QUESTION # 44

What is the primary function of an AppNav cluster?

- A. connecting applications to navigation systems
- B. monitoring application logs
- **C. distributing packet flow**
- D. optimizing traffic

**Answer: C**

Explanation:

The primary function of an AppNav cluster is to distribute packet flows across multiple Wide Area Application Services (WAAS) devices to ensure optimized traffic management and scalability. It helps manage load distribution and redundancy for traffic that is being optimized.

This enhances the performance of applications over the WAN by distributing packet flows intelligently across the available resources.
