New AWS-Developer Study Guide - How to Prepare for Amazon AWS-Developer Efficiently and Easily

If you are still unsure whether to pursue DumpsKing Amazon AWS-Developer exam questions for AWS-Developer certification exam preparation, you are losing the game at the first stage in a fiercely competitive marketplace. DumpsKing Amazon AWS-Developer Questions are the best option for becoming AWS-Developer certified.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q219-Q224):

NEW QUESTION # 219

A developer has observed an increase in bugs in the AWS Lambda functions that a development team has deployed in its Node.js application.

To minimize these bugs, the developer wants to implement automated testing of Lambda functions in an environment that closely simulates the Lambda environment.

The developer needs to give other developers the ability to run the tests locally. The developer also needs to integrate the tests into the team's continuous integration and continuous delivery (CI/CD) pipeline before the AWS Cloud Development Kit (AWS CDK) deployment.

Which solution will meet these requirements?

- A. Create sample events based on the Lambda documentation. Create automated test scripts that use the `cdk local invoke` command to invoke the Lambda functions. Check the response. Document the test scripts for the other developers on the team. Update the CI/CD pipeline to run the test scripts.
- B. Create sample events based on the Lambda documentation. Create a Docker container from the Node.js base image to invoke the Lambda functions. Check the response. Document how to run the Docker container for the other developers on the team. Update the CI/CD pipeline to run the Docker container.
- C. Install a unit testing framework that reproduces the Lambda execution environment. Create sample events based on the Lambda documentation. Invoke the handler function by using a unit testing framework. Check the response. Document how to run the unit testing framework for the other developers on the team. Update the CI/CD pipeline to run the unit testing framework.
- D. Install the AWS Serverless Application Model (AWS SAM) CLI tool. Use the `sam local generate-event` command to generate sample events for the automated tests. Create automated test scripts that use the `sam local invoke` command to invoke the Lambda functions. Check the response. Document the test scripts for the other developers on the team. Update the CI/CD pipeline to run the test scripts.

Answer: D

Explanation:

The AWS Serverless Application Model Command Line Interface (AWS SAM CLI) is a command-line tool for local development and testing of Serverless applications³. The `sam local generate-event` command of AWS SAM CLI generates sample events for automated tests³. The `sam local invoke` command is used to invoke Lambda functions³. Therefore, option C is correct.

NEW QUESTION # 220

A Developer must deploy a new AWS Lambda function using an AWS CloudFormation template.

Which procedures will deploy a Lambda function? (Select TWO.)

- A. Upload the function code to a private Git repository, then add a reference to it in an `AWS::Lambda::Function` resource in the template.
- B. Upload the code to an AWS CodeCommit repository, then add a reference to it in an `AWS::Lambda::Function` resource in the template.
- C. Create an `AWS::Lambda::Function` resource in the template, then write the code directly inside the CloudFormation template.
- D. Upload a .ZIP file containing the function code to Amazon S3, then add a reference to it in an `AWS::Lambda::Function` resource in the template.

- E. Upload a .ZIP file to AWS CloudFormation containing the function code, then add a reference to it in an AWS::Lambda::Function resource in the template.

Answer: C,E

NEW QUESTION # 221

You cannot access your AWS console, so you revert to using the CLI that you are not familiar with. Which of the following commands is not a valid CLI command for EC2 instances?

- A. ec2-attach-internet-gateway
- B. ec2-associate-route-table
- C. ec2-allocate-address
- D. ec2-allocate-interface

Answer: D

Explanation:

You can use the CLI tools to manage your Amazon EC2 resources (such as instances, security groups, and volumes) and your Amazon VPC resources (such as VPCs, subnets, route tables, and Internet gateways). Before you can start using the tools, you must download and configure them.

The following are valid CLI commands for EC2 instances:

ec2-accept-vpc-peering-connection
ec2-allocate-address
ec2-assign-private-ip-addresses
ec2-associate-address
ec2-associate-dhcp-options
ec2-associate-route-table
ec2-attach-internet-gateway
ec2-attach-network-interface (not ec2-allocate-interface)

NEW QUESTION # 222

A company recently migrated its web, application and NoSQL database tiers to AWS. The company is using Auto Scaling to scale the web and application tiers. More than 95 percent of the Amazon DynamoDB requests are repeated read-requests. How can the DynamoDB NoSQL tier be scaled up to cache these repeated requests?

- A. Amazon SQS
- B. Amazon CloudFront
- C. Amazon DynamoDB Accelerator
- D. Amazon EMR

Answer: C

Explanation:

Explanation/Reference: <https://aws.amazon.com/dynamodb/dax/>

NEW QUESTION # 223

An application reads data from an Amazon DynamoDB table. Several times a day, for a period of 15 seconds, the application receives multiple ProvisionedThroughputExceeded errors.

How should this exception be handled?

- A. Use the DynamoDB "UpdateItem" API to increase the provisioned throughput capacity of the table.
- B. Immediately retry the failed read requests.
- C. Retry the failed read requests with exponential backoff.
- D. Create a new global secondary index for the table to help with the additional requests.

Answer: C

NEW QUESTION # 224

.....

And if you still feel uncertain about the content, wondering whether it is the exact AWS-Developer exam material that you want, you can free download the demo to check it out. You will be quite surprised by the convenience to have an overview just by clicking into the link, and you can experience all kinds of AWS-Developer versions. Though the content of the AWS-Developer exam questions is the same, but the displays vary to make sure that you can study by your favorite way.
