

Pass Guaranteed Quiz 2026 Workday-Prism-Analytics: Efficient Test Workday Pro Prism Analytics Exam Dumps

WORKDAY PRISM ANALYTICS – OVERVIEW CONTINUED...

I have covered the few terminology used in Prism and provided equivalent in Database for just understanding purpose. There are some more like Prism Security group etc.

Term	Definition	Database
Base Data Set	A BDS stores data that represent in tabular format but there is more difference between table and BDS.	External Table
Table	A table stores data that represent in tabular format. It has more features than BDS	Table
Prism Calculated Field	It is a calculated field that is applied in a existing data.	Functions
Derived Data Set	It may be combined with BDS, Table, DDS that is created already.	SQL View
Published Data Set	The PDS creates snapshot of the data from DDS and creates Prism data source which can then be used in Workday applications.	Materialized SQL View

I have provided details about Prism APIs which we are going to use it for migrating data from 3rd party systems to Workday Prism Analytics. We are not going to compare Pros & Cons between these APIs as this can be read in Workday Administrator Guide from Workday Community.

Prism APIs	Description
V1	Version 1 APIs are used to migrate the data and store the data in Base data sets
V2& V3	Version 2 & Version 3 APIs are used to migrate the data and store the data in table. Version 3 APIs is having more features than Version 2.
Data Change Task	Data change Task APIs are used to support the latest features that is provided in the Prism Analytics.

It is inescapable choice to make why don't you choose our Workday-Prism-Analytics practice materials with passing rate up to 98-100 percent. You can have a sweeping through of our Workday-Prism-Analytics practice materials with intelligibly and under-stable contents. It is time to take the plunge and you will not feel depressed. All incomprehensible issues will be small problems and all contents will be printed on your minds. So even trifling mistakes can be solved by using our Workday-Prism-Analytics practice materials, as well as all careless mistakes you may make.

We have to admit that the exam of gaining the Workday-Prism-Analytics certification is not easy for a lot of people, especial these people who have no enough time. If you also look forward to change your present boring life, maybe trying your best to have the Workday-Prism-Analytics Certification is a good choice for you. Now it is time for you to take an exam for getting the certification.

>> Test Workday-Prism-Analytics Dumps <<

Pass Guaranteed Quiz 2026 Valid Workday Test Workday-Prism-Analytics Dumps

Since the childhood, we seem to have been studying and learning seems to take part in different kinds of the purpose of the test, at the same time, we always habitually use a person's score to evaluate his ability. And our Workday-Prism-Analytics real study braindumps can help you get better and better reviews. This is a very intuitive standard, but sometimes it is not enough comprehensive, therefore, we need to know the importance of getting the test Workday-Prism-Analytics Certification, qualification certificate for our future job and development is an important role. Only when we have enough qualifications to prove our ability can we defeat our opponents in the harsh reality. We believe our Workday-Prism-Analytics actual question will help you pass the qualification examination and get your qualification certificate faster and more efficiently.

Workday Pro Prism Analytics Exam Sample Questions (Q33-Q38):

NEW QUESTION # 33

You accidentally delete a Prism calculated field that is used in other Prism calculated fields or conditions. What is a possible outcome?

- A. Any calculated field referencing the deleted field defaults to zero.
- B. The system will automatically adjust any dependencies accordingly.
- C. Errors will result in any stage or calculated field that references the field.
- D. The system will automatically reverse the deletion because the field is referenced elsewhere.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, calculated fields are often interdependent, with one calculated field referencing another in its expression or being used in conditions within a dataset's transformation stages. According to the official Workday Prism Analytics study path documents, if a calculated field is deleted while other calculated fields or conditions depend on it, the system does not automatically handle the dependency. Instead, this deletion will cause errors in any stage or calculated field that references the deleted field. These errors occur because the dependent calculations or conditions can no longer resolve the reference to the deleted field, leading to failures in the dataset's transformation pipeline or when the dataset is processed or published.

The other options are incorrect:

A: The system will automatically reverse the deletion because the field is referenced elsewhere: Prism Analytics does not have an automatic reversal mechanism for deletions; users must manually restore the field if needed.

B: Any calculated field referencing the deleted field defaults to zero: The system does not default to zero; it will instead throw an error due to the unresolved reference.

D: The system will automatically adjust any dependencies accordingly: Prism does not automatically adjust dependencies; the user must manually update the dependent fields or conditions to resolve the issue.

The resulting errors highlight the importance of carefully managing dependencies when deleting calculated fields, ensuring that all references are updated or removed to avoid disruptions in the dataset's transformation logic.

Workday Prism Analytics Study Path Documents, Section: Data Prep and Transformation, Topic: Managing Calculated Fields and Dependencies Workday Prism Analytics Training Guide, Module: Data Prep and Transformation, Subtopic: Impact of Deleting Calculated Fields on Dataset Transformations

NEW QUESTION # 34

A Prism data writer needs to create a new Prism calculated field on a derived dataset using the CASE function. When creating a calculated field, what symbol do you use to view a list of fields that you can select from in the dataset?

- A. (
- B. {
- C. #
- D. [

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, when creating a calculated field in a derived dataset, users often need to reference existing fields in the dataset within their expressions, such as in a CASE function. According to the official Workday Prism Analytics study path documents, to view and select from a list of available fields in the dataset while building a calculated field expression, the user types the [symbol (left square bracket). This symbol triggers a dropdown list of all fields in the dataset, allowing the user to select the

desired field without manually typing its name, reducing the risk of errors. For example, typing [and selecting a field like "Employee_ID" will insert [Employee_ID] into the expression, which can then be used in the CASE function logic.

The other symbols do not serve this purpose:

* B. (: Parentheses are used for grouping expressions or defining function parameters, not for field selection.

* C. #: The hash symbol is not used in Prism Analytics for field selection; it may be associated with other functionalities in different contexts.

* D. { : Curly braces are not used for field selection in Prism Analytics; they may be used in other systems for different purposes, such as templating.

The use of the [symbol ensures an efficient and accurate way to reference fields in a calculated field expression, streamlining the creation process in Prism Analytics.

NEW QUESTION # 35

While viewing your lineage, you realize you have forgotten to add a description to some of your derived datasets. From the lineage, you double-click on a dataset to view the dataset details. What is the next step to add the missing descriptions?

- A. Select Add Field from the dataset details to create a description.
- B. Select the pencil icon next to the Import stage to update the description.
- **C. Select Related Actions next to the dataset name and Edit Transformations.**
- D. Select the pencil icon next to the dataset name and Edit Transformations.

Answer: C

Explanation:

To add or update the description of a derived dataset in Workday Prism Analytics, you should access the Edit Dataset Transformations task. This can be done by selecting the Related Actions next to the dataset name and choosing Edit Transformations. This method allows you to modify various aspects of the dataset, including its description.

This process is outlined in the Workday Prism Analytics User Guide, which states:

"If you have permission to edit a dataset, you can access the Edit Dataset Transformations task using these methods:

* Right-click the dataset name on the Data Catalog report and select Edit Transformations.

* Select Edit Transformations from the Quick Actions on the View Dataset Details report.

* Access the Edit Dataset task and select the dataset name that you want to edit." Once in the Edit Dataset Transformations task, you can update the dataset's description by clicking on the configuration icon (often represented as a gear or pencil icon) and editing the description field.

NEW QUESTION # 36

You want to import a Workday custom report into the data catalog. You have already enabled it as a web service and enabled it for Prism Analytics. What other configuration is required?

- A. It must be built as a matrix report.
- B. It must be tagged with a Prism Analytics report tag.
- **C. It must be shared with or owned by the user importing the report.**
- D. It must be imported via sFTP.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

To import a Workday custom report into the Prism Analytics Data Catalog, specific configurations are required to ensure the report is accessible and usable. According to the official Workday Prism Analytics study path documents, in addition to enabling the report as a web service and enabling it for Prism Analytics, the report must be shared with or owned by the user who is performing the import. This security requirement ensures that only authorized users can access and import the report into the Data Catalog, aligning with Workday's configurable security model. The user must either be the owner of the report or have it shared with them through appropriate security permissions (e.g., via a security group or direct sharing).

The other options are incorrect:

- * A. It must be imported via sFTP: Custom reports are imported directly through Workday's web service integration, not via sFTP, which is typically used for file-based data sources.
- * B. It must be built as a matrix report: There is no requirement for the report to be a matrix report; Prism Analytics supports various report types, including advanced and simple reports, as long as they are properly configured.
- * D. It must be tagged with a Prism Analytics report tag: Tagging is not a mandatory step for importing a report into the Data Catalog, though it may be used for organizational purposes.

Ensuring that the report is shared with or owned by the importing user is a critical step to maintain security and governance during the integration process.

NEW QUESTION # 37

A Prism data administrator notices that several of the Prism calculated fields on their lineage are producing nil results, so they need to revise the expressions for all of the affected calculated fields. Where can they review the expressions in bulk?

- A. Any table in the lineage.
- B. Any dataset in the lineage.
- C. The View Dataset Lineage report.
- D. The table or dataset where the calculated field was created.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, calculated fields are defined within datasets, and their expressions dictate the logic used to compute their values. When issues like nil results arise, an administrator needs a centralized view to review and troubleshoot these expressions. According to the official Workday Prism Analytics study path documents, the View Dataset Lineage report is the tool that allows users to review the lineage of datasets, including the expressions of calculated fields, in bulk. This report provides a visual representation of the data lineage, showing the relationships between tables, datasets, and calculated fields, and allows users to drill into the details of each dataset to inspect the expressions of calculated fields across the lineage.

The other options are not as effective for this purpose:

A: The table or dataset where the calculated field was created: While you can review expressions in the specific dataset where a calculated field was created, this approach does not allow for a bulk review across multiple datasets in the lineage.

C: Any table in the lineage: Tables store raw data and do not contain calculated field expressions, which are defined in datasets.

D: Any dataset in the lineage: Reviewing datasets individually does not provide a bulk view of all calculated fields across the lineage, making it less efficient than the View Dataset Lineage report.

The View Dataset Lineage report is the most efficient way to review and troubleshoot calculated field expressions in bulk, enabling the administrator to identify and revise the problematic expressions causing nil results.

NEW QUESTION # 38

.....

In this cut-throat competitive world of UpdateDumps, the Workday Workday-Prism-Analytics certification is the most desired one. But what creates an obstacle in the way of the aspirants of the Workday Workday-Prism-Analytics certificate is their failure to find up-to-date, unique, and reliable Workday-Prism-Analytics practice material to succeed in passing the Workday Workday-Prism-Analytics certification exam. If you are one of such frustrated candidates, don't get panic. UpdateDumps declares its services in providing the real Workday-Prism-Analytics PDF Questions.
