

# Peoplecert DevOps-Foundation Exam Dumps - Reliable Way To Get Success

P.S. Free 2026 Peoplecert DevOps-Foundation dumps are available on Google Drive shared by Pass4training: <https://drive.google.com/open?id=12JswdKsZwrg4Anq7DofkBu-M2X4LzxJW>

In order to help you control the DevOps-Foundation examination time, we have considerably designed a special timer to help your adjust the pace of answering the questions of the DevOps-Foundation study materials. Many people always are stopped by the difficult questions. Then they will fall into thoughts to try their best to answer the questions of the DevOps-Foundation Real Exam. But they forgot to answer the other questions, our DevOps-Foundation training guide can help you solve this problem and get used to the pace.

Exam DevOps-Foundation tests your professional talent and expertise. This is the reason that passing this PeopleCert DevOps certification exam has been a tough challenge for professionals. But it is made easy now to ace it! The recently developed Pass4training's DevOps-Foundation Exam Questions dumps aim at to deliver you the shortest possible route to obtaining DevOps-Foundation without any chance of losing the exam.

## Peoplecert DevOps-Foundation PDF Format for Easy Access

The whole payment process on our DevOps-Foundation exam braindumps only lasts a few seconds as long as there has money in your credit card. Then our system will soon deal with your orders according to the sequence of payment. Usually, you will receive the DevOps-Foundation Study Materials no more than five minutes. Then you can begin your new learning journey of our DevOps-Foundation preparation questions. All in all, our payment system and delivery system are highly efficient.

## Peoplecert PeopleCert DevOps Foundation v3.6 Exam Sample Questions (Q47-Q52):

### NEW QUESTION # 47

What is "Cycle Time"?

- A. The time taken from a code commit to completing tests and being ready for continuous delivery
- **B. The time it takes from a story to go from 'in progress' to 'done'**
- C. The time it takes for a requirement to go from the product backlog to live
- D. The total elapsed time from the point when a user story enters the backlog, until the time it is completed - including the time spent waiting in a backlog

**Answer: B**

Explanation:

Cycle Time in Agile and DevOps measures the time taken for work to move from the start of active work ("in progress") to completion ("done"). It reflects the efficiency of the development process and helps identify bottlenecks in active work. Bandwidth Lead Time, which includes the time spent in the backlog before work starts. It is a subset metric related to build/test time, not the full cycle time.

Shorter cycle times indicate more efficient processes and faster delivery of value. Monitoring cycle time enables continuous improvement by highlighting delays within active work.

#### NEW QUESTION # 48

Updates to a complex critical business service are released every calendar quarter. The business would like to increase the frequency of releases for this service.

Why would segmenting the service into microservices help to improve the frequency of release?

- A. Microservices are always open source so they can be modified frequently to meet business requirements
- **B. Microservices create a service architecture built on smaller modules that can be updated independently without affecting the primary system**
- C. Microservices can be built quickly to correct or remove errors in the primary system
- D. Microservices are less expensive and therefore can be built and released more frequently

**Answer: B**

Explanation:

Microservices architecture breaks down applications into small, independent, loosely coupled services that can be developed, tested, and deployed independently.

\* Why does this improve release frequency? Each microservice can be updated, tested, and deployed on its own, reducing the risk and coordination overhead associated with monolithic releases.

\* This allows for faster feedback and more frequent delivery of value to users.

Extract-style reference:

"Microservices enable teams to deploy independently, reduce deployment risk, and increase release frequency by decoupling services."

-Accelerate: The Science of Lean Software and DevOps, Chapter 4

PeopleCert DevOps Foundation v3.6: Stresses modular architectures for enabling rapid, independent deployments and continuous delivery.

#### NEW QUESTION # 49

Which of the following is an example of a "shift left" testing strategy?

- A. Manual testing
- B. Biannual vulnerability assessments of live systems
- **C. Unit testing as part of continuous integration**
- D. Testing in production

**Answer: C**

Explanation:

Shift Left Testing means moving testing earlier in the development process, so defects are found sooner and fixes are cheaper.

Unit testing as part of CI is the classic "shift left" strategy: automated unit tests run with every code change, catching errors before code moves further down the pipeline.

\* Testing in production (A) is "shift right."

\* Manual testing (B) is typically late-stage and not automated.

\* Biannual vulnerability assessments (D) are after-the-fact and far from "shift left." Extract-style reference:

"Shift left means performing testing activities earlier, for example by including unit tests in the CI process, reducing costly late-stage defects."

-DevOps Handbook

PeopleCert Foundation: "Shift left" is a key DevOps testing principle—find issues fast, fix fast, deploy safely.

#### NEW QUESTION # 50

Which of the following DevOps practices encourages conversation driven development, delivery and support?

- A. The Second Way
- **B. ChatOps**
- C. Communication Platforms
- D. VisOps

**Answer: B**

Explanation:

ChatOps is the DevOps practice of using chat platforms (like Slack, Teams, Mattermost) as the central interface for communication, collaboration, and even automated deployment or support tasks.

It encourages "conversation-driven development, delivery, and support," making processes transparent and collaborative.

\* Second Way(A) is about feedback loops, but not specifically conversational platforms.

\* Communication Platforms(C) is a generic term

\* VisOps(D) is not a standard DevOps term

Extract-style reference:

"ChatOps is a collaboration model that connects people, tools, process, and automation into a transparent workflow. Teams communicate and execute commands from a central chat client."

-DevOps Handbook

PeopleCert Foundation v3.6: ChatOps promotes rapid feedback and a culture of sharing.

### NEW QUESTION # 51

The goal of which role is the creation of ultra-scalable and highly reliable software systems?

- A. Product Owner
- B. Site resilience engineer
- C. Software engineer
- **D. Site reliability engineer**

**Answer: D**

Explanation:

The Site Reliability Engineer (SRE) role originated at Google and is now widely recognized. SREs apply software engineering principles to IT operations to create systems that are scalable, reliable, and highly available. Their responsibilities include:

\* Designing reliability into systems (SLIs, SLOs, SLAs)

\* Automating operational tasks to reduce toil

\* Building monitoring and alerting systems

\* Performing capacity planning and disaster recovery exercises

A(Site resilience engineer) is not a standard industry term. C(Software engineer) focuses on developing applications but not specifically on operational reliability. D(Product Owner) is a role in Agile frameworks that manages product backlog and priorities, not system reliability.

Thus, the correct answer is B - Site Reliability Engineer.
