Professional-Cloud-DevOps-Engineer Reliable Exam Simulations Exam | Best Way to Pass Google Professional-Cloud-DevOps-Engineer

In order to help these people who have bought the Professional-Cloud-DevOps-Engineer study materials of our company, There is a team of expert in our company, which is responsible to renovate and update the Professional-Cloud-DevOps-Engineer study materials provided by our company. We are going to promise that we will have a lasting and sustainable cooperation with customers who want to buy the Professional-Cloud-DevOps-Engineer Study Materials from our company. If you decide to buy our Professional-Cloud-DevOps-Engineer study materials, you will never miss any important information. In addition, we can promise the updating system is free for you.

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q17-Q22):

NEW QUESTION # 17

Your application artifacts are being built and deployed via a CI/CD pipeline. You want the CI/CD pipeline to securely access application secrets. You also want to more easily rotate secrets in case of a security breach. What should you do?

- A. Store secrets in Cloud Storage encrypted with a key from Cloud KMS. Provide the CI/CD pipeline with access to Cloud KMS via IAM.
- B. Store secrets in a separate configuration file on Git. Provide select developers with access to the configuration file.
- C. Encrypt the secrets and store them in the source code repository. Store a decryption key in a separate repository and grant your pipeline access to it
- D. Prompt developers for secrets at build time. Instruct developers to not store secrets at rest.

Answer: A

NEW QUESTION # 18

You are the Operations Lead for an ongoing incident with one of your services. The service usually runs at around 70% capacity. You notice that one node is returning 5xx errors for all requests. There has also been a noticeable increase in support cases from customers. You need to remove the offending node from the load balancer pool so that you can isolate and investigate the node. You want to follow Google-recommended practices to manage the incident and reduce the impact on users. What should you do?

- A. 1. Drain traffic from the unhealthy node and remove the node from service.2. Monitor traffic to ensure that the error is resolved and that the other nodes in the pool are handling the traffic appropriately.3. Scale the pool as necessary to handle the new load.4. Communicate your actions to the incident team.
- B. 1. Drain traffic from the unhealthy node and remove the old node from service.2. Add a new node to the pool, wait for the new node to report as healthy, and then serve traffic to the new node.3. Monitor traffic to ensure that the pool is healthy and is handling traffic appropriately.4. Communicate your actions to the incident team.
- C. 1. Communicate your intent to the incident team.2. Perform a load analysis to determine if the remaining nodes can handle the increase in traffic offloaded from the removed node, and scale appropriately.3. When any new nodes report healthy, drain traffic from the unhealthy node, and remove the unhealthy node from service.
- D. 1. Communicate your intent to the incident team.2. Add a new node to the pool, and wait for the new node to report as healthy.3. When traffic is being served on the new node, drain traffic from the unhealthy node, and remove the old node from service.

Answer: C

NEW QUESTION # 19

You manage your company's primary revenue-generating application. You have an error budget policy in place that freezes production deployments when the application is close to breaching its SLO. A number of issues have recently occurred, and the application has exhausted its error budget. You need to deploy a new release to the application that includes a feature urgently required by your largest customer. You have been told that the release has passed all unit tests. What should you do?

- A. Delay the deployment of the feature until the error budget is replenished.
- B. Start the deployment of the feature immediately.
- C. Re-run the unit tests, and start the deployment of the feature if the tests pass.
- D. Deploy the feature to a subset of users, and gradually roll out to all users if there are no errors reported.

Answer: D

NEW QUESTION # 20

You are managing the production deployment to a set of Google Kubernetes Engine (GKE) clusters. You want to make sure only images which are successfully built by your trusted CI/CD pipeline are deployed to production. What should you do?

- A. Set up the Kubernetes Engine clusters with Binary Authorization.
- B. Enable Cloud Security Scanner on the clusters.
- C. Enable Vulnerability Analysis on the Container Registry.

- D. Set up the Kubernetes Engine clusters as private clusters.

Answer: C

NEW QUESTION # 21

You need to enforce several constraint templates across your Google Kubernetes Engine (GKE) clusters. The constraints include policy parameters, such as restricting the Kubernetes API. You must ensure that the policy parameters are stored in a GitHub repository and automatically applied when changes occur. What should you do?

- **A. Configure Config Sync with the GitHub repository. When there is a change in the repository, use Config Sync to apply the change.**
- B. Set up a GitHub action to trigger Cloud Build when there is a parameter change. In Cloud Build, run a gcloud CLI command to apply the change.
- C. When there is a change in GitHub, use a webhook to send a request to Cloud Service Mesh, and apply the change.
- D. Configure Config Connector with the GitHub repository. When there is a change in the repository, use Config Connector to apply the change.

Answer: A

NEW QUESTION # 22

.....

If you are still a student, you must have learned from the schoolmaster how difficult it is to go out to work now. If you have already taken part in the work, you must have felt deeply the pressure of competition in society. Professional-Cloud-DevOps-Engineer exam materials can help you stand out in the fierce competition. After using our Professional-Cloud-DevOps-Engineer Study Materials, you have a greater chance of passing the Professional-Cloud-DevOps-Engineer certification, which will greatly increase your soft power and better show your strength.
