Salesforce Certified Business Analyst Exam Sample Questions (Q149-Q154):

NEW QUESTION # 149
Northern Trail Outfitters (NTO) is undergoing a Salesforce implementation for Service Cloud. The busjpess analyst is currency working with the development team as they build features in the sandbox. NTO wants to test these features before the changes are deployed to the production environment.
As part of the Application lifecycle Management (ALM) process, which three development models does Salesforce support?

- A. Salesforce DX, Flow Builder, Rapid Application Development
- B. Change Set Development, Org Development, Package Development

- C. Rapid Application Development, Org Development Package Development

Answer: B

NEW QUESTION # 150

A business analyst (BA) at Northern Trail Outfitters is preparing for a user acceptance testing (UAT) session for a global Sales Cloud project.

What should the BA do to engage the business most effectively during UAT"?

- A. Work business stakeholders to collaborate in writing, reviewing, and executing UATscenarios, providing feedback,and approval for release.
- B. Hand or ownership for writing, reviewing, and executing UAT scenarios, providing feedback, and approval for release to business stakeholders.
- C. Work with quality assurance analysts to collaborate in writing, reviewing and executing UAT scenarios, providing feedback, and approval for release.

Answer: A

NEW QUESTION # 151

A business analyst (BA) working on a Service Cloud implementation is reviewing user stories to verify they are written effectively.

What should the BA confirm about the user stories when completing this review?

- A. They contain substantial details and focus on technical elements.
- B. They are dependent on related acceptance criteria and overlap with other use cases.
- C. They can be easily prioritized and are small enough to estimate accurately.

Answer: C

Explanation:

The business analyst should confirm that the user stories are written effectively by checking that they can be easily prioritized and are small enough to estimate accurately. User stories are short and simple descriptions of a feature or functionality from the perspective of an end user or customer. User stories should follow the INVEST criteria, which stands for Independent, Negotiable, Valuable, Estimable, Small, and Testable. User stories that can be easily prioritized and are small enough to estimate accurately are more likely to meet the Estimable and Small criteria. Estimable means that a user story should have enough information and clarity to allow developers and testers to estimate the effort and time required to complete it. Small means that a user story should be simple and concise, and it should be able to be completed within a single sprint by a single developer or a small team. NEW QUESTION # 152

Universal Containers wants to streamline a complex business process. The business analyst (BA) assigned to the Service Cloud project is creating a business process map of the existing process. The BA is having difficulty documenting the process because there is disagreement among the stakeholders about the steps that are being followed.

Which recommendation should the BA make to help the stakeholders reach agreement about the process?

- A. Focus on the inputs and outcomes of the current process
- B. Brainstorm ideas to make the process more efficient.
- C. Refer to the Responsible, Accountable, Consulted, Informed (RACI) chart to determine who is accountable.

Answer: A

NEW QUESTION # 153

The Cloud Kicks business analyst (BA) is frustrated because the requirements tracking spreadsheet is often incomplete or out-of-sync for the Slack transition project. The development team has recommended that the BA use a DevOps tool as an alternative.

What are the benefits of using a DevOps tool in this situation?

- A. Tracks changes in real time and provides a single source of truth

- B. Tracks changes for the testing team and provides access to user stories
- C. Tracks changes on a daily basis and provides a history of changes

Answer: A

Explanation:
Explanation
The benefits of using a DevOps tool in this situation are that it tracks changes in real time and provides a single source of truth. A DevOps tool is a software application that supports the collaboration and coordination of development and operations teams throughout the software development lifecycle. It helps to automate, monitor, and manage various tasks and processes, such as version control, code review, testing, deployment, and feedback. A DevOps tool tracks changes in real time and provides a single source of truth by keeping all team members updated on the status and progress of the project and ensuring that everyone is working on the latest version of the code and requirements.
