Pegasystems PEGACPBA24V1 시험요강:

주제	소개
주제 1	• User Experience: This domain assesses skills of UX Designers and Frontend Developers in configuring user interface elements. Candidates learn to group fields to create views, add or remove fields, configure portal content, adjust form appearance, visibility, and controls for an improved user experience.

주제 2	• Application Development: This section evaluates skills of Pega Business Architects and Developers in application development. It covers the roles and skills of a Pega Business Architect, identification of project stakeholders, and benefits of Pega's Center-out™ business architecture. Candidates learn about App Studio's value, understand rules, rulesets, classes, and the role of generative AI. The domain also covers Pega's CI • CD pipeline with Deployment Manager, use of collaboration tools, managing application development with user stories, feedback, and bug tracking, and using tools like Case Type Backlog and Estimator for project scoping.
주제 3	• Case Management: This domain targets Case Designers and Process Architects and explores designing a case lifecycle, including setting case statuses and adding instructions for tasks. Candidates demonstrate ability to configure service level agreements with urgency, goals, and deadlines, and manage routing of assignments to users, work groups, or queues. This section also includes configuring email correspondence, identifying duplicate cases, adding optional actions and automating workflow decisions using conditions. Candidates learn to pause and resume case processing, skip stages or processes, configure child cases, use automation shapes appropriately, and create and manage user teams.

질문 # 79

Life insurance company has satellite offices in various countries. Each satellite office has a work queue. Company policy requires that life insurance underwriting be signed to offices based on the policy owner's residential address. Which routing approach supports this requirement?

- A. Route the assignment to the correct work queue based on business logic.
- B. Route the assignment to the correct work queue by using a reporting structure.
- C. Route the assignment to the correct work queue by using an authority matrix.
- D. Route the assignment to a specific underwriter based on business logic.

정답: A

설명:

To route life insurance underwriting assignments to the correct satellite office based on the policy owner's residential address, using business logic is the most appropriate approach. This approach involves:

* Define Routing Rules:Create decision rules or decision tables that map the policy owner's residential address to the corresponding satellite office's work queue.

* Implement Business Logic:Configure the routing step in the case type to use these decision rules. The business logic will determine the correct work queue based on the address.

* Route to Work Queue:The assignment is routed to the work queue of the satellite office that corresponds to the policy owner's residential address.

This method ensures that each assignment is accurately directed to the appropriate office based on predefined business logic.
