Data-Architect Test Lab Questions, Updated Data-Architect Testkings

For the candidates, getting access to the latest Salesforce Data-Architect practice test material takes a lot of work. The study materials for the Data-Architect test preparation are spread throughout a number of websites and the majority of them aren't updated. However, the applicants only have a short time to prepare for the Salesforce Data-Architect Exam. They want a platform that offers the latest and real Data-Architect exam questions so they can get prepared within a few days.

Salesforce Certified Data Architect Sample Questions (Q29-Q34):

NEW QUESTION # 29
UC has a variety of systems across its technology landscape, including SF, legacy enterprise resource planning (ERP) applications and homegrown CRM tools. UC has decided that they would like to consolidate all customer, opportunity and order data into Salesforce as part of its master data management (MDM) strategy.
What are the 3 key steps that a data architect should take when merging data from multiple systems into Salesforce? Choose 3 answers:

- A. Install a 3rd party AppExchange tool to handle the merger
- B. Analyze each system's data model and perform gap analysis
- C. Create new fields to store additional values from all the systems.
- D. Utilize an ETL tool to merge, transform and de-duplicate data.
- E. Work with Stakeholders to define record and field survivorship rules

Answer: B,D,E

NEW QUESTION # 30

All accounts and opportunities are created in Salesforce. Salesforce is integrated with three systems:

* An ERP system feeds order data into Salesforce and updates both Account and Opportunity records.
* An accounting system feeds invoice data into Salesforce and updates both Account and Opportunity records.
* A commission system feeds commission data into Salesforce and updates both Account and Opportunity records.

How should the architect determine which of these systems is the system of record?

- A. Account and opportunity data originates in Salesforce, and therefore Salesforce is the system of record.
- B. Whatever system updates the attribute or object should be the system of record for that field or object.
- C. Data flows should be reviewed with the business users to determine the system of record per object or field.
- D. Whatever integration data flow runs last will, by default, determine which system is the system of record.

Answer: C

NEW QUESTION # 31

Get Cloud Consulting needs to integrate two different systems with customer records into the Salesforce Account object. So that no duplicate records are created in Salesforce, Master Data Management will be used.
An Architect needs to determine which system is the system of record on a field level.
What should the Architect do to achieve this goal?

- A. Master Data Management systems determine system of record, and the Architect doesn't have to think about what data is controlled by what system.
- B. Key stakeholders should review any fields that share the same purpose between systems to see how they will be used in Salesforce.
- C. The database schema for each external system should be reviewed, and fields with different names should always be separate fields in Salesforce.
- D. Any field that is an input field in either external system will be overwritten by the last record integrated and can never have a system of record.

Answer: C

NEW QUESTION # 32

A health care provider wishes to use salesforce to track patient care. The following actions are in Salesforce
1. Payment Providers: Orgas who pay for the care 2 patients.
2. Doctors: They provide care plan for patients and need to support multiple patients, they are provided access to patient information.
3. Patients: They are individuals who need care.
A data architect needs to map the actor to Sf objects. What should be the optimal selection by the data architect?

- A. Patients as Contacts, Payment providers as Accounts, & Doctors as Accounts
- B. Patients as Person Accounts, Payment providers as Accounts, & Doctors as Person Account
- C. Patients as Person Accounts, Payment providers as Accounts, & Doctors as Contacts
- D. Patients as Accounts, Payment providers as Accounts, & Doctors as Person Accounts

Answer: B

Explanation:
Patients as Person Accounts, Payment providers as Accounts, & Doctors as Person Accounts is the optimal selection by the data architect to map the actor to Salesforce objects. This is because Person Accounts are a special type of accounts that can store both business and personal information for individual customers. Payment providers are organizations that pay for the care of patients, so they can be modeled as Accounts. Doctors are also individuals who provide care plans for patients and need access to patient information, so they can also be modeled as Person Accounts.

NEW QUESTION # 33

Two million Opportunities need to be loaded in different batches into Salesforce using the Bulk API in parallel mode.
What should an Architect consider when loading the Opportunity records?

- A. Group batches by the AccountId field.
- B. Use the Name field values to sort batches.
- C. Order batches by Auto-number field.
- D. Create indexes on Opportunity object text fields.

Answer: A

Explanation:
Grouping batches by the AccountId field can improve the performance and avoid locking issues when loading Opportunity records using the Bulk API in parallel mode1. This is because the AccountId field is indexed and can be used to distribute the records evenly across batches

NEW QUESTION # 34

......

Many people may have different ways and focus of study to pass Data-Architect exam in the different time intervals, but we will find that in real life, can take quite a long time to learn Data-Architect learning questions to be extremely difficult. You may be taken up with all kind of affairs, and sometimes you have to put down something and deal with the other matters for the latter is more urgent and need to be done immediately. With the help of our Data-Architect training guide, your dream won't be delayed anymore.
