

CheckPoint 156-315.81 Preparation Store & Online 156-315.81 Training

CheckPoint 156-315.81 Reliable Exam Sims, New 156-315.81 Exam Preparation

If you want to clear the exam for CheckPoint 156-315.81 certification along with your job, there is no need to worry about it. You can choose **Reliable Exam Sims** for the upcoming test and get all the **156-315.81 Check Point Certified Security Expert R81 exam questions** and practice with CheckPoint 156-315.81 exam questions any time you want. There is no unchangeable fact.

In a knowledge-based job market, learning is your greatest asset for your next advancement. Knowledge is wealth. Modern society needs top talent. Broad knowledge, and a comprehensive quality of compound talents. Our 156-315.81 certification materials can help you translate into a veritable talent. Many job seekers have successfully reached the social freedom with the assistance of our 156-315.81 test training. All your dreams will be fully realized after you have striven at the 156-315.81 candidate. Finding a good-paying job is available for you. Good chances are here. Please follow your heart.

New 156-315.81 Exam Preparation, Trustworthy 156-315.81 Source

PreCheckPoint 156-315.81 exam training materials can help you come one year ahead. Factors it contains all the questions of CheckPoint 156-315.81 examination. With PreCheckPoint, you could know yourself after the exam preparation completely. With high quality training materials by PreCheckPoint provided, you will certainly pass the exam. PreCheckPoint can give you a brighter future.

Our considerate service is not only reflected in the purchase process, but also reflected in the considerate after-sales assistance on our 156-315.81 exam questions. We will provide considerate after-sales service to every user who purchased our 156-315.81 practice materials. If you have any questions after you buy our 156-315.81 study guide, you can always get thoughtful support and help by email or online inquiry. If you need any support, and we are always here to help you.

The Check Point Certified Security Expert R81 certification is recognized globally and is highly valued by employers in the IT industry. Check Point Certified Security Expert R81 certification validates the candidate's expertise in managing and administering Check Point Security solutions, making them a valuable asset to any organization. It also provides candidates with the opportunity to enhance their career prospects and increase their earning potential.

Candidates who pass the CheckPoint 156-315.81 exam will receive the Check Point Certified Security Expert R81 certification. Check Point Certified Security Expert R81 certification is recognized globally as a symbol of expertise in Check Point security solutions. It demonstrates that the candidate has the skills and knowledge required to install, configure, and manage Check Point security solutions effectively. Moreover, this certification can help professionals to advance their careers in the field of network security and gain new job opportunities.

The Check Point Certified Security Expert R81 or 156-315.81 Exam is a certification exam that validates the knowledge and skills of IT professionals in implementing, managing, and troubleshooting Check Point technologies. Check Point Certified Security Expert

R81 certification is designed for experienced security professionals who want to enhance their knowledge and expertise in Check Point technologies and security management.

Our company has always been following the trend of the 156-315.81 certification. Our research and development team not only study what questions will come up in the exam, but also design powerful study tools like 156-315.81 exam simulation software. This Software version of our 156-315.81 learning questions are famous for its simulating function of the real exam, which can give the candidates a chance to experience the real exam before they really come to it.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q111-Q116):

NEW QUESTION # 111

What kind of information would you expect to see using the sim affinity command?

- A. The involved firewall kernel modules in inbound and outbound packet chain
- B. Overview over SecureXL templated connections
- C. The VMACs used in a Security Gateway cluster
- D. Network interfaces and core distribution used for CoreXL

Answer: D

Explanation:

Explanation

The kind of information that you would expect to see using the command is network interfaces and core distribution used for CoreXL. Sim affinity is a command that allows administrators to view and modify the CPU core affinity of network interfaces and SecureXL instances. CoreXL is a technology that improves the performance of the Security Gateway by using multiple cores to handle concurrent connections. The sim affinity command can show which network interfaces and SecureXL instances are bound to which CPU cores, and allow administrators to change the affinity settings.

NEW QUESTION # 112

Ken wants to obtain a configuration lock from other administrator on R81 Security Management Server. He can do this via WebUI or via CLI.

Which command should he use in CLI? (Choose the correct answer.)

- A. override database lock
- B. The database feature has one command lock database override.
- C. remove database lock
- D. The database feature has two commands lock database override and unlock database. Both will work.

Answer: D

NEW QUESTION # 113

Besides fw monitor, what is another command that can be used to capture packets?

- A. ping
- B. tcpdump
- C. arp
- D. traceroute

Answer: B

NEW QUESTION # 114

Which Correction mechanisms are available with ClusterXL under R81.20?

- A. Correction Mechanisms are only available of Maestro Hyperscale Orchestrators
- B. Pre-Correction and SDF (Sticky Decision Function)
- C. Dispatcher (Early Correction) and Firewall (Late Correction)
- **D. SDF (Sticky Decision Function) and Flush and ACK**

Answer: D

Explanation:

SDF (Sticky Decision Function) and Flush and ACK are the two correction mechanisms that are available with ClusterXL under R81.20. According to the ClusterXL R81.20 Administration Guide¹, correction mechanisms are methods that ClusterXL uses to prevent or recover from out-of-state situations, which occur when different Cluster Members have different information about the connections that they handle¹. ClusterXL supports two types of correction mechanisms: SDF and Flush and ACK¹.

SDF (Sticky Decision Function) is a mechanism that ensures that packets of the same connection are always handled by the same Cluster Member, regardless of the load balancing algorithm. SDF uses a hash table that maps each connection to a specific Cluster Member, based on the 5-tuple of source IP, destination IP, source port, destination port, and protocol. SDF prevents out-of-state situations by avoiding the switch of Cluster Members for existing connections¹.

Flush and ACK is a mechanism that synchronizes the connection tables of different Cluster Members when an out-of-state situation is detected. Flush and ACK works as follows:

When a Cluster Member receives a packet that belongs to an unknown connection, it sends a Flush message to all other Cluster Members, asking them to delete the connection from their tables.

When a Cluster Member receives a Flush message, it checks if it has the connection in its table. If it does, it deletes the connection and sends an ACK message to the sender of the Flush message, indicating that it has performed the deletion.

When a Cluster Member receives an ACK message, it creates a new connection entry in its table for the packet that triggered the Flush message, and processes the packet normally.

If a Cluster Member does not receive any ACK message within a timeout period, it assumes that no other Cluster Member has the connection, and creates a new connection entry in its table for the packet that triggered the Flush message¹.

NEW QUESTION # 115

You had setup the VPN Community VPN-Stores'with 3 gateways. There are some issues with one remote gateway(1.1.1.1) and an your local gateway. What will be the best log filter to see only the IKE Phase 2 agreed networks for both gateways

- **A. action:"Key Install- AND 1.1.1.1 AND Quick Mode**
- B. Blade:"VPN" AND VPN-Stores AND Main Mode
- C. Blade:"VPN" AND VPN-Stores AND Quick Mode
- D. action:"Key Install" AND 1.1.1.1 AND Main Mode

Answer: A

Explanation:

The best log filter to see only the IKE Phase 2 agreed networks for both gateways is B. action:"Key Install" AND 1.1.1.1 AND Quick Mode¹. This filter will show you the logs that indicate the successful establishment of IKE Phase 2, which is also known as Quick Mode². In this phase, the Security Gateway and the remote gateway negotiate the IPSec Security Associations (SAs) and exchange the encryption keys for the VPN tunnel². The action:"Key Install" field shows that the SAs were installed successfully³. The 1.1.1.1 field shows that the logs are related to the remote gateway with that IP address³. The Quick Mode field shows that the logs are related to IKE Phase 2, as opposed to Main Mode, which is IKE Phase 13. To use this filter, you need to go to SmartConsole, open SmartLog, and enter the filter expression in the search box³.
