Oracle Fusion Cloud Applications SCM Foundations Associate - Rel 1 Sample Questions (Q20-Q25):

NEW QUESTION # 20

Which two Oracle Redwood Design System UX features, when integrated with Oracle Fusion Applications SCM, deliver a superior user experience?

- A. Automated Task Management.
- B. Simplified User Interface (UI).
- C. Enhanced Mobile Accessibility.
- D. Advanced Data Visualization.

Answer: B,D

Explanation:

The Oracle Redwood Design System enhances Oracle Fusion Applications SCM's user experience with Simplified User Interface (UI) (C) and Advanced Data Visualization (D). The Simplified UI offers an intuitive, clutter-free design with consistent layouts and minimal clicks-e.g., a planner can access demand forecasts in two steps instead of navigating complex menus, boosting productivity. Advanced Data Visualization provides interactive charts and dashboards (e.g., a heat map of inventory levels), enabling users to quickly interpret complex data and make informed decisions. Option A (Enhanced Mobile Accessibility) is valuable but less transformative than UI simplicity and visualization for daily SCM tasks. Option B (Automated Task Management) is a functional feature, not a UX design element. Together, C and D reduce learning curves, enhance decision-making, and elevate user satisfaction.

NEW QUESTION # 21

What is the function of Cost Rollup in Oracle Fusion Cloud SCM?

- A. It ensures material costs remain unchanged over time.
- B. It tracks only direct labor expenses, excluding materials.
- C. It calculates the total cost of a product by aggregating material, labor, and overhead expenses.

Answer: C

Explanation:

Cost Rollup in Oracle Fusion Cloud SCM aggregates all cost components-material, labor, and overhead-to calculate the total cost of a product. This process rolls up costs from raw materials through production stages, providing a comprehensive view for pricing and profitability analysis. For example, producing a widget might involve \$5 in materials, \$3 in labor, and \$2 in overhead; Cost Rollup totals this to \$10 per unit. Option B is incorrect because it excludes materials and overhead, which are integral to the process. Option C is false-Cost Rollup reflects current costs, not fixed values, adapting to fluctuations like material price changes. This function supports accurate financial reporting, cost control, and strategic decision-making by revealing true production costs.

NEW QUESTION # 22

Which two capabilities within the Predict Demand process in the Demand to Management OMBP make it a powerful tool for demand planning and management?

- A. Machine Learning-based Forecasting.
- B. Collaborative Forecasting Platform.
- C. Demand Sensing.
- D. Statistical Forecasting.

Answer: A,B

Explanation:

The Predict Demand process within the Demand to Management OMBP in Oracle Fusion Cloud SCM leverages advanced capabilities to enhance demand planning. Collaborative Forecasting Platform (A) enables stakeholders-such as sales teams, suppliers, and distributors-to collaborate in real time, inputting qualitative insights (e.g., market trends or promotions) that refine forecasts beyond pure data analysis. For example, a retailer might adjust forecasts based on an upcoming sale confirmed via the platform, improving accuracy. Machine Learning-based Forecasting (B) uses algorithms to analyze historical data, detect patterns (e.g., seasonality or anomalies), and adapt predictions dynamically, making it more precise than traditional methods. For instance, it might identify a spike in demand for umbrellas during unexpected rainy seasons. Option C (Statistical Forecasting) is a traditional method relying on statistical models but lacks the adaptive intelligence of machine learning, though it's still used as a foundation. Option D (Demand Sensing) focuses on short-term demand signals (e.g., point-of-sale data) rather than long-term planning, making it complementary but not a core strength of Predict Demand. Together, A and B empower businesses with both human collaboration and cutting-edge AI, ensuring robust demand planning that balances quantitative and qualitative inputs.

NEW QUESTION # 23

What is the primary purpose of the Demand to Management OMBP in Oracle Fusion Cloud SCM?

- A. It guarantees same-day delivery for all orders.
- B. It focuses only on local inventory availability.
- C. It eliminates the need for supplier collaboration.
- D. It ensures accurate demand forecasting and planning.

Answer: D

Explanation:

The Demand to Management OMBP (C) in Oracle Fusion Cloud SCM ensures accurate demand forecasting and planning, translating market signals into actionable supply strategies. It uses tools like machine learning and collaborative forecasting to predict demand-e.g., forecasting 1,000 units for a holiday season-and aligns inventory and production accordingly. Option A is incorrect-it addresses enterprise-wide demand, not just local stock. Option B is false-no process guarantees same-day delivery; it focuses on planning. Option D is wrong-supplier collaboration is integral to fulfilling demand. This OMBP minimizes overstocking or shortages, optimizing resources and enhancing customer service through precise planning.

NEW QUESTION # 24

What is the primary function of the Order Promising process in Oracle Fusion Cloud SCM?

- A. It guarantees same-day shipping for all orders.
- B. It eliminates the need for supplier collaboration.
- C. It only manages orders for direct-to-customer deliveries.
- D. It provides accurate order commitment dates based on supply and demand availability.

Answer: D

Explanation:

The Order Promising process (A) in Oracle Fusion Cloud SCM, primarily through Global Order Promising (GOP), provides accurate order commitment dates by analyzing real-time supply (inventory, production capacity) and demand (existing orders, forecasts) data. For instance, if a customer orders 50 units and only 30 are in stock with a 2-day production lead time, it commits to delivery in 2 days, not immediately. Option B is incorrect-it handles all order types (B2B, internal), not just direct-to-customer. Option C is false-no system can universally guarantee same-day shipping; commitments depend on constraints. Option D is wrong-supplier collaboration is often required to fulfill promises. This process enhances customer trust by avoiding overpromising, optimizes resource allocation, and integrates with supply chain planning for seamless execution.
