SalesforceのB2C-Commerce-Architect認証試験の最新の訓練の手引き

Salesforceの認証資格は最近ますます人気になっていますね。国際的に認可された資格として、Salesforceの認定試験を受ける人も多くなっています。その中で、B2C-Commerce-Architect認定試験は最も重要な一つです。では、この試験に合格するためにどのように試験の準備をしているのですか。がむしやりに試験に関連する知識を勉強しているのですか。それとも、効率が良い試験B2C-Commerce-Architect参考書を使っているのですか。

Salesforce B2C-Commerce-Architectの試験は、Salesforce B2C Commerceを使用した商業アーキテクチャ、デザイン、および実装に関する候補者の知識とスキルをテストする、やりがいのある認定試験です。この試験は、商業アーキテクチャ、データモデリング、サイトデザインと開発、統合、パフォーマンス最適化などのトピックをカバーしています。この試験は60の多肢選択問題から構成され、制限時間は105分です。

Salesforce Certified B2C Commerce Architect 認定 B2C-Commerce-Architect 試験問題 (Q18-Q23):

質問 # 18

During a review of the most recent release notes, the Architect finds that Salesforce has deprecated an API that is used throughout the site. After reviewing the deprecated API usage in Business Manager, the Architect narrows down the usage of that API to a particular LINK integration cartridge. The cartridge was integrated when the site was first launched and is heavily customized for the Client.

What is the recommended way for the Architect to remove the deprecated API so the LINK integration continues to work without interruptions, and lowest level of effort?

- A. The Architect should check to see if the LINK cartridge has been updated already, integrate it, apply the customisations, and test thoroughly.
- B. The Architect should update all the deprecated API calls in the already integrated LINK cartridge and test thoroughly.
- C. The Architect should contact the company that created the LINK cartridge to fix the issue and provide the client with updated code.
- D. The Architect does not need to do anything at this time, the API will continue to work with no issues for the foreseeable future.

正解: A

質問 # 19

Given the SFRA Controller below:

Why would a JavaScript debugger, that is stopped at line 06, fail to show the viewdata variable in the inspection tool?

- A. viewdata is assigned but not declared.
- B. cache.applyDefaultCache is not a valid middleware.
- C. viewdata is a B2C Script reserved name.
- D. viewdata is declared but not assigned.

正解: A

質問 # 20

Northern Trail Outfitters (NTO) wants to migrate its online shop from a custom ecommerce platform to B2C Commerce. NTO needs to migrate several thousands of customer records profile information, address book). NTO can provide a B2C Commerce feed. It is currently using SHA-256 as an encryption mechanism for the customer passwords.

What approach can the Architect propose?

- A. Import the customer records, excluding the password field, and B2C Commerce will automatically require a password reset the first time a customer logs in to the storefront.
- B. Do not import customer records and ask customers to create new accounts the first time they try to log in to the B2C Commerce storefront.
- C. Import the customer records, including the hashed password, as B2C Commerce supports SHA-256, and they will be able to login with their existing password.
- D. Import the customer records, with the hashed password as a custom attribute, and during the login compare the entered password with the hashed password and save it in the password field.

正解: D

質問 # 21

A university is considering using Experience Cloud so its students can interact with advisors who have Service Cloud licenses. The university would like to offer the easiest path for existing students to log in while still maintaining security. They have an on-premises Active Directory identity provider and use Google Workspace (formerly known as G Suite) for student email addresses.

What should a Solution Architect recommend?

- A. Implement OAuth 2.0 authentication protocol with Google Workspace as Service Provider.
- B. Implement Aloha template for students to access email with Salesforce Authenticator app.
- C. Implement Active Directory and Salesforce Identity for SAML delegated Single Sign On.
- D. Implement Social Sign On with OpenID Connect and Google Workspace as Auth Provider.

正解: A

質問 # 22

A third party survey provider offers both an API endpoint for individual survey data and an SFTP server endpoint that can accept

batch survey data. The initial implementation of the integration includes

1. Marking the order as requiring a survey before order placement
2. On the order confirmation page, the survey form is displayed for the customer to fill
3. The data is sent to the survey provider API, and the order is marked as not requiring a survey. Later it was identified that this solution is not fit for purpose as the following issues and additional requirements were identified:
 1. If the API call fails, the corresponding survey data is lost. The Business requires to avoid data loss.
 2. Some customers skipped the form. The Business requires sending a survey email to such customers.
 3. The Order Management System (OMS) uses a non-standard XML parser it did not manage to parse orders with the survey, until the survey attribute was manually removed from the xml.

How should the Architect address the issues and requirements described above?

- A. Send the survey data to the API endpoint in real-time until the survey data is successfully captured. Instruct the OMS development team to update their XML parser, use the Order survey attribute to send emails for the cases when the survey was skipped.
- B. Create a custom object when the survey is required. Send to the API endpoint in real-time. On success, remove the object. On failure, capture the survey data in the custom object and later reprocess with a job. Use the custom object to send emails for the cases when survey was skipped.
- C. Create a custom session attribute when the survey is required. Send to the API endpoint in real-time. On failure, capture the survey data in the session and reprocess, use the session attribute to send emails for the cases when survey was skipped.
- D. Create a custom object to store the survey data. Send to the API endpoint using a job. On success, remove the custom object. On failure, send the survey data with API from the next execution of the same job. Use the custom object to send emails for the cases when the survey was skipped.

正解: B

解説:

This approach addresses all concerns: data retention, reattempt on failure, and follow-up communication. By storing survey data in a custom object, data is preserved even if the API call fails, allowing for reprocessing.

This method also facilitates sending follow-up emails by querying custom objects for surveys that were skipped, ensuring comprehensive coverage and reliability in data handling and customer engagement.
