Test Salesforce Identity-and-Access-Management-Architect Centres & Pass Identity-and-Access-Management-Architect Test Guide

Now you can pass Identity-and-Access-Management-Architect exam without going through any hassle. You can only focus on Identity-and-Access-Management-Architect exam dumps provided by the PrepPDF, and you will be able to pass the Identity-and-Access-Management-Architect test in the first attempt. We provide high quality and easy to understand Identity-and-Access-Management-Architect pdf dumps with verified Identity-and-Access-Management-Architect for all the professionals who are looking to pass the Identity-and-Access-Management-Architect exam in the first attempt. The Identity-and-Access-Management-Architect training material package includes latest Identity-and-Access-Management-Architect PDF questions and practice test software that will help you to pass the Identity-and-Access-Management-Architect exam.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q88-Q93):

NEW QUESTION # 88

Universal containers uses an Employee portal for their employees to collaborate. employees access the portal from their company's

internal website via SSO. It is set up to work with Active Directory. What is the role of Active Directory in this scenario?

- A. Service provider
- **B. Identity provider**
- C. Identity store
- D. Authentication store

Answer: B

NEW QUESTION # 89

Universal containers(UC) has implemented SAML-BASED single Sign-on for their salesforce application and is planning to provide access to salesforce on mobile devices using the salesforce1 mobile app. UC wants to ensure that single Sign-on is used for accessing the salesforce1 mobile app. Which two recommendations should the architect make? Choose 2 answers

- A. Use the existing SAML SSO flow along with Web server flow
- **B. Configure the salesforce1 app to use the my domain URL**
- **C. Configure the embedded Web browser to use my domain URL.**
- D. Use the existing SAML SSO flow along with user agent flow.

Answer: B,C

Explanation:

To use SAML SSO for accessing the Salesforce1 mobile app, the architect should recommend configuring the embedded web browser to use the My Domain URL and configuring the Salesforce1 app to use the My Domain URL. Using the My Domain URL allows Salesforce to identify the identity provider and initiate the SSO process. Using the existing SAML SSO flow along with user agent flow or web server flow is not necessary because Salesforce Mobile Applications only work with service provider initiated setups.

Therefore, option B and D are the correct answers.

References: Salesforce Mobile Application Single Sign-On overview, SAML SSO with Salesforce as the Service Provider, Single Sign-On

NEW QUESTION # 90

Universal containers (UC) has multiple salesforce orgs and would like to use a single identity provider to access all of their orgs. How should UC'S architect enable this behavior?

- **A. Ensure that users have the same Federation ID value in their user records in all of UC's salesforce orgs.**
- B. Ensure that users have the same alias value in their user records in all of UC's salesforce orgs.
- C. Ensure the same username is allowed in multiple orgs by contacting salesforce support.
- D. Ensure that users have the same email value in their user records in all of UC's salesforce orgs.

Answer: A

Explanation:

The best option for UC's architect to enable the behavior of using a single identity provider to access all of their Salesforce orgs is to ensure that users have the same Federation ID value in their user records in all of UC's Salesforce orgs. The Federation ID is a field on the user object that stores a unique identifier for each user that is consistent across multiple systems. The Federation ID is used by Salesforce to match the user with the SAML assertion that is sent by the identity provider during the single sign-on (SSO) process. By ensuring that users have the same Federation ID value in all of their Salesforce orgs, UC can enable users to log in with the same identity provider and credentials across multiple orgs. The other options are not valid ways to enable this behavior. Ensuring that users have the same email value in their user records in all of UC's Salesforce orgs does not guarantee that they can log in with SSO, as email is not used as a unique identifier by Salesforce. Ensuring the same username is allowed in multiple orgs by contacting Salesforce support is not possible, as username must be unique across all Salesforce orgs. Ensuring that users have the same alias value in their user records in all of UC's Salesforce orgs does not affect the SSO process, as alias is not used as a unique identifier by Salesforce. References: [Federation ID], [SAML SSO with Salesforce as the Service Provider], [Username], [Alias]

NEW QUESTION # 91

Universal containers (UC) wants users to authenticate into their salesforce org using credentials stored in a custom identity store. UC does not want to purchase or use a third-party Identity provider. Additionally, UC is extremely wary of social media and does not

consider it to be trust worthy. Which two options should an architect recommend to UC? Choose 2 answers

- A. Build a custom web page that uses the identity store and calls frontdoor.jsp
- **B. Implement the Openid protocol and configure an authentication provider**
- C. Use a professional social media such as LinkedIn as an Authentication provider
- **D. Build a custom Web service that is supported by Delegated Authentication.**

Answer: B,D

Explanation:

Explanation

The two options that an architect should recommend to UC are to build a custom web service that is supported by delegated authentication and to implement the OpenID protocol and configure an authentication provider. Delegated authentication is a feature that allows Salesforce to delegate user authentication to an external service instead of using Salesforce credentials³. A custom web service can be built to use the credentials stored in the custom identity store and validate them against Salesforce using SOAP or REST API³. OpenID is an open standard protocol that allows users to authenticate with various web services using an existing account⁴. An authentication provider can be configured in Salesforce to use OpenID and connect with the custom identity store⁵. References: Delegated Authentication, OpenID, Authentication Providers

NEW QUESTION # 92

A service provider (SP) supports both Security Assertion Markup Language (SAML) and OpenID Connect (OIDC). When integrating this SP with Salesforce, which use case is the determining factor when choosing OIDC or SAML?

- **A. The SP needs to perform API calls back to Salesforce on behalf of the user after the user logs in to the service provider.**
- B. They are equivalent protocols and there is no real reason to choose one over the other.
- C. If the user has a session on Salesforce, you do not want them to be prompted for a username and password when they login to the SP.
- D. OIDC is more secure than SAML and therefore is the obvious choice.

Answer: A

Explanation:

Explanation

When integrating a SP that supports both SAML and OIDC with Salesforce, the use case that is the determining factor when choosing OIDC or SAML is whether the SP needs to perform API calls back to Salesforce on behalf of the user after the user logs in to the service provider. OIDC is a protocol that allows users to authorize an external application to access Salesforce resources on their behalf. OIDC provides an access token that can be used to call Salesforce APIs. SAML is a protocol that allows users to authenticate and authorize with an external identity provider and access Salesforce resources. SAML does not provide an access token, but only a session ID that can be used for web-based access. Therefore, if the SP needs to perform API calls back to Salesforce, OIDC is the preferred choice over SAML. References: OpenID Connect, SAML, Authorize Apps with OAuth

NEW QUESTION # 93

.....

On the pages of our Identity-and-Access-Management-Architect study tool, you can see the version of the product, the updated time, the quantity of the questions and answers, the characteristics and merits of the product, the price of our product, the discounts to the client, the details and the guarantee of our Identity-and-Access-Management-Architect study torrent, the methods to contact us, the evaluations of the client on our product, the related exams and other information about our Salesforce Certified Identity and Access Management Architect test torrent.
