Free PDF Quiz 2026 Adobe AD0-E725: Adobe Commerce Developer Expert Fantastic Reliable Exam Testking

One year of free Adobe AD0-E725 test questions updates are included in the SnowPro Core Certification test AD0-E725 quiz package. This means that if any changes are made to the Adobe Commerce Developer Expert (AD0-E725) exam, you will be able to obtain the updated Adobe AD0-E725 Test Questions preparation immediately. This is a great method to keep up to date on the latest Adobe Commerce Developer Expert (AD0-E725) questions information and ensure you pass the Adobe Commerce

Developer Expert (AD0-E725) with ease.

Adobe AD0-E725 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Customizations: This section of the exam measures the skills of Solutions Engineers and involves modifying and extending platform functionality. This includes customizing core areas like the product catalog, checkout process, and admin panel, as well as manipulating data entities, customizing APIs, working with message queues, and writing integration tests to ensure code quality and functionality.
Topic 2	<ul style="list-style-type: none">Cloud: This section of the exam measures the skills of Cloud Architects and covers the deployment and management of Adobe Commerce on cloud infrastructure. It requires explaining the fundamental cloud architecture, performing setup and configuration tasks, and utilizing the Adobe Commerce Cloud CLI tool to manage the environment effectively.
Topic 3	<ul style="list-style-type: none">External Integrations: This section of the exam measures the skills of Integration Specialists and focuses on connecting Adobe Commerce with external SaaS services. It encompasses the skills needed to customize data flows, utilize Adobe App Builder for extensibility, and implement Adobe IO events and webhooks to create automated and connected business processes.
Topic 4	<ul style="list-style-type: none">Section 1: Architecture: This section of the exam measures the skills of Backend Developers and covers the core structural concepts of Adobe Commerce. It involves demonstrating effective cache implementation, understanding key code components like plugins and observers, and managing multi-site configurations on a single instance. The domain also includes explaining the use of Git patches, critical security features, the CRON scheduling system, and how indexing functions within the platform.

Adobe Commerce Developer Expert Sample Questions (Q39-Q44):

NEW QUESTION # 39

A Developer working on a Magento 2 store needs to modify the Content Security Policy (CSP) to allow loading of images from a trusted external domain while maintaining strict policies for other resources. To accomplish this, the `csp_whitelist.xml` file must be updated.

Which code snippet should the Developer use to update the CSP configuration?

- A.

```
<policies>
  <policy id="img-src">
    <values>
      <value id="trusted_image" type="host">website.com</value>
    </values>
  </policy>
</policies>
```
- B.

```
<csp>
  <policies>
    <policy id="media-src">
      <values>
        <value id="trusted_image" type="host">website.com</value>
      </values>
    </policy>
  </policies>
</csp>
```
- C.

```
<policies>
  <policy id="default-src">
    <values>
      <value id="trusted_image" type="host">website.com</value>
    </values>
  </policy>
</policies>
```

Answer: A

Explanation:

To allow loading of external images, the policy that must be updated is `img-src` in the `csp_whitelist.xml`.

Option A (`default-src`) is too broad and not best practice.

Option C (`media-src`) applies only to audio/video sources, not images.

Thus, B is the correct solution.

NEW QUESTION # 40

A client recently started using the new Adobe Live Search functionality. They report an issue with content from the website, such as CMS blocks, not returning with the search result.

A Developer is asked to investigate because the client wants this content to be part of the data pool of Live Search.

How should the Developer respond to the client?

- **A. Share documentation regarding the limitations of Live Search.**
- B. Extend the class `Magento\LiveSearchAdapter\Model\Attribute\Metadata`.
- C. Advise the client to enable content for Live Search from the admin panel.

Answer: A

Explanation:

Adobe Live Search is designed to handle catalog product data only. It does not index or return CMS content such as blocks or pages. This is a known limitation of Live Search.

B is invalid because there is no admin setting to enable CMS content in Live Search.

C is not a supported solution; extending Live Search classes will not include CMS content.

Reference:

Adobe Commerce DevDocs - Live Search limitations

NEW QUESTION # 41

An Adobe Commerce Developer is tasked with adding a custom tax calculation to the checkout process. In addition to core tax calculations, a legacy code extending core tax calculation classes is also found. The Developer wants to utilize Magento's dependency injection system effectively to meet requirements, ensuring the solution works without modifying the existing core and legacy classes.

What should the Developer implement to achieve this?

- **A. Virtual types**
- B. Constructor arguments
- C. Preferences

Answer: A

Explanation:

The correct approach is Virtual types.

Virtual types allow developers to configure existing classes with different constructor arguments and create multiple variations of the same class without modifying the core or legacy code.

Preferences (C) would replace one class with another entirely, which could break the legacy functionality.

Constructor arguments (A) are part of DI but don't allow multiple variants of the same class like virtual types do.

Reference:

Adobe Commerce DevDocs - Virtual types

NEW QUESTION # 42

An Adobe Commerce Cloud Developer is tasked with investigating slow page loads and intermittent errors reported by a client after a recent deployment to their Pro Production environment.

Which action should the Developer use to quickly access and analyze the necessary data?

- **A. Connect via SSH into each production node to review system and application logs independently for a more accurate**

representation of issues being logged.

- B. Access Cloud Console to review environment messages and deployment logs that took place during the previous deployment to production.
- C. Go to New Relic Log Management to access aggregated log data, allowing the analysis of application, infrastructure, CDN, and WAF errors.

Answer: C

NEW QUESTION # 43

A Developer applies multiple quality patches to an Adobe Commerce Cloud store. After deployment, the Developer discovers that one of the patches is causing issues.

What is the correct procedure to safely remove or revert the problematic quality patch?

- A. Delete the quality patch from the file `magento.env.yaml`.
- B. Execute command in `magento-cloud`:
`./vendor/bin/ece-patches revert <patch-id>`
- C. Delete the quality patch from the file `magento.app.yaml`.

Answer: B

Explanation:

The Quality Patches Tool (QPT) in Adobe Commerce Cloud provides a way to apply and revert patches. To safely remove a problematic patch, run:

```
/vendor/bin/ece-patches revert <patch-id>
```

This ensures that the patch is properly removed without affecting other applied patches.

A and C are incorrect because patches are not managed via YAML config files.
