

IAPP AIGP Exam Dumps - Best Exam Preparation Method

5. Study Resources (Books, Practice Papers, Videos, Training)

Your study plan will only be as good as the resources you use. Quality study materials can make a huge difference in understanding the content and ultimately acing the exam.

- **Official IAPP Study Guide:** Start with official materials if available. The IAPP often provides an [official AIGP study guide](#) or textbook. This is gold because it's aligned exactly with the exam syllabus. According to one source, a comprehensive IAPP AIGP Study Guide covers all the syllabus topics, provides easy-to-understand explanations, and even practical examples.
- **Books and Publications:** Beyond official guides, look for books on AI governance, AI ethics, and privacy that cover the material. As of now, there might not be a plethora of AIGP-specific books besides IAPP's own, but topics like "ethical AI", "AI law", etc., are covered in academic and professional books.
- **Practice Papers and Question Banks:** Practice questions are your best friend for exam prep. They test your knowledge and get you in the mindset of how questions are asked.
- **Mock Exams:** In addition to practice question sets, take full-length mock exams as you approach test day. Platforms like [CertFun](#) offer realistic practice exams with an interface similar to the actual test.
- **Training Courses:** Self-study is great, but guided preparation can make all the difference. If you prefer structured learning, consider enrolling in official or third-party training programs aligned with the AIGP syllabus. InfosecTrain's [AIGP training](#) is specifically designed to cover the exam objectives thoroughly, with expert guidance and hands-on practice. Access structured learning, hands-on exercises, practice questions, and insider exam tips.

We offer you free demo to have a try before buying, and you know the content of the complete version through the free demo. We have professional service staff for AIGP exam dumps, and if you have any questions, you can have a conversation with us.

IAPP Certified Artificial Intelligence Governance Professional Sample Questions (Q163-Q168):

NEW QUESTION # 163

If it is possible to provide a rationale for a specific output of an AI system, that system can best be described as?

- A. Reliable.
- B. Transparent.
- **C. Explainable.**
- D. Accountable.

Answer: C

Explanation:

If it is possible to provide a rationale for a specific output of an AI system, that system can best be described as explainable. Explainability in AI refers to the ability to interpret and understand the decision-making process of the AI system. This involves being able to articulate the factors and logic that led to a particular output or decision. Explainability is critical for building trust, enabling users to understand and validate the AI system's actions, and ensuring compliance with ethical and regulatory standards. It also facilitates debugging and improving the system by providing insights into its behavior.

NEW QUESTION # 164

CASE STUDY

A premier payroll services company that employs thousands of people globally, is embarking on a new hiring campaign and wants to implement policies and procedures to identify and retain the best talent. The new talent will help the company's product team expand its payroll offerings to companies in the healthcare and transportation sectors, including in Asia.

It has become time consuming and expensive for HR to review all resumes, and they are concerned that human reviewers might be susceptible to bias.

To address these concerns, the company is considering using a third-party AI tool to screen resumes and assist with hiring. They have been talking to several vendors about possibly obtaining a third-party AI-enabled hiring solution, as long as it would achieve its goals and comply with all applicable laws.

The organization has a large procurement team that is responsible for the contracting of technology solutions.

One of the procurement team's goals is to reduce costs, and it often prefers lower-cost solutions. Others within the company deploy technology solutions into the organization's operations in a responsible, cost-effective manner.

The organization is aware of the risks presented by AI hiring tools and wants to mitigate them. It also questions how best to organize and train its existing personnel to use the AI hiring tool responsibly. Their concerns are heightened by the fact that relevant laws vary across jurisdictions and continue to change.

The organization continues planning the adoption of an AI tool to support hiring, but is concerned about potential bias in content generated by AI systems and how that could affect public perception.

Which of the following measures should the company adopt to best mitigate its risk of reputational harm from using the AI tool?

- A. Require the procurement and deployment teams to agree upon the AI tool
- B. Continue to require the company's hiring personnel to manually screen all applicants
- C. Ensure the vendor provides indemnification for the AI tool
- **D. Test the AI tool pre- and post-deployment**

Answer: D

Explanation:

Note: This is the same scenario and question as Question 21 and thus has the same correct answer: A. It's possible this was duplicated in your original input.

Repeated for clarity:

"Testing AI tools pre- and post-deployment helps ensure they perform as expected and do not introduce bias, privacy issues, or fairness concerns. This mitigates reputational and legal risk." The AI Governance in Practice Report 2025 further reinforces:

"Ongoing monitoring and testing post-deployment allows organizations to catch and correct unintended impacts... especially

important in HR and hiring contexts."

NEW QUESTION # 165

CASE STUDY

Please use the following to answer the next question:

A mid-size US healthcare network has decided to develop an AI solution to detect a type of cancer that is most likely to arise in adults. Specifically, the healthcare network intends to create a recognition algorithm that will perform an initial review of all imaging and then route records to a radiologist for secondary review pursuant to agreed-upon criteria (e.g., a confidence score below a threshold).

To date, the healthcare network has:

- Defined its AI ethical principles.
- Conducted discovery to identify the intended uses and success criteria for the system.
- Established an AI risk committee.
- Assembled a cross-functional team with clear roles and responsibilities.
- Created policies and procedures to document standards, workflows, timelines and risk thresholds during the project.

The healthcare network intends to retain a cloud provider to host the solution. It also intends to retain a large consulting firm to supplement its small data science team and help develop the algorithm using the healthcare network's existing data and de-identified data that is licensed from a large US clinical research partner.

In the design phase, which of the following steps is most important in gathering the data from the clinical research partner?

- A. Combine only anonymized data.
- B. Segregate the data sets.
- **C. Review the terms of use.**
- D. Perform a privacy impact assessment.

Answer: C

Explanation:

Reviewing the terms of use is essential to ensure legal compliance and appropriate permissions when gathering data from the clinical research partner during the design phase.

NEW QUESTION # 166

According to the GDPR, what is an effective control to prevent a determination based solely on automated decision-making?

- **A. Establish a human-in-the-loop procedure.**
- B. Provide a just-in-time notice about the automated decision-making logic.
- C. Define suitable measures to safeguard personal data.
- D. Provide a right to review automated decision.

Answer: A

Explanation:

GDPR requires effective controls like human-in-the-loop procedures to prevent decisions based solely on automated processing without human intervention.

NEW QUESTION # 167

If it is possible to provide a rationale for a specific output of an AI system, that system can best be described as:

- A. Reliable.
- B. Transparent.
- **C. Explainable.**
- D. Accountable.

Answer: C

Explanation:

An AI system that can provide a rationale for its specific outputs is considered explainable because it offers understandable reasons for its decisions.
