우리 ITDumpsKR에는 최신의Pegasystems PEGACPLSA23V1합습가이드가 있습니다. ITDumpsKR의 부지런한 IT전문가들이 자기만의 지식과 끊임없는 노력과 경험으로 최고의Pegasystems PEGACPLSA23V1합습자료로Pegasystems PEGACPLSA23V1인증시험을 응시하실 수 있습니다.Pegasystems PEGACPLSA23V1인증시험은 IT업계에서의 비중은 아주 큼니다. 시험신청하시는분들도 많아지고 또 많은 분들이 우리ITDumpsKR의Pegasystems PEGACPLSA23V1자료로 시험을 패스했습니다. 이미 패스한 분들의 리뷰로 우리ITDumpsKR의 제품의 중요함과 정확함을 증명하였습니다.

Pegasystems PEGACPLSA23V1 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> • Pega Platform Design Extended:Use App Studio for app development. Understand features of Prediction Studio and Admin Studio. Reuse relevant components efficiently. Grasp the basics of UX design, DX API, and Constellation. Design accessible and user-friendly experiences.

주제 2	<ul style="list-style-type: none"> Reporting Design: Create reports that meet business needs and support performance. Troubleshoot reporting issues. Write queries, use SQL functions, and combine data through joins, subreports, and associations.
주제 3	<ul style="list-style-type: none"> Security Design: Choose the right authentication and access models based on the situation. Configure access groups, roles, and role hierarchies. Understand rule-level security. Spot and prevent security threats. Apply best practices to secure applications and use event logging for monitoring.
주제 4	<ul style="list-style-type: none"> Pega Platform Design: Understand the value of Center-out architecture in building scalable Pega solutions. Explore how deployment options influence app design, and apply performance monitoring. Work with distributed case designs and know when to include other Pega tools. Learn about multi-tenant systems, high availability, and features like Pega Mobile, IVA, and Process Fabric. Gain insight into containerization, Hazelcast, and cloud architecture. Understand Agile Workbench and Agile Studio tools.
주제 5	<ul style="list-style-type: none"> Application Design Extended: Manage work assignment and routing, and use features like Get Next Work. Explore different ways to allocate tasks. Handle mid-case flow changes and fix issues using problem flows. Implement background processing, job schedulers, queue processors, and asynchronous integrations. Understand how to use stream services, data flows, and datasets in Pega Infinity.
주제 6	<ul style="list-style-type: none"> Application Design: Learn how Microjourneys guide app design. Understand case structure, Pega Express methods, and best practices. Create case hierarchies, and use rulesets, classes, and specialisation wisely. Apply layered design for scalable solutions.

높은 적중율을 자랑하는 PEGACPLSA23V1시험패스 가능한 인증덤프 덤프로 Certified Pega Lead System Architecture (LSA) Exam 23 시험도전

ITDumpsKR 에서 제공해드리는 Pegasystems PEGACPLSA23V1덤프는 아주 우수한 IT인증덤프자료 사이트입니다. IT업계엘리트한 강사들이 퍼펙트한 Pegasystems PEGACPLSA23V1 덤프문제집을 제작하여 디테일한 시험문제와 답으로 여러분이 아주 간단히Pegasystems PEGACPLSA23V1시험을 패스할 수 있도록 최선을 다하고 있습니다.

최신 CLSA PEGACPLSA23V1 무료샘플문제 (Q12-Q17):

질문 # 12

Which one of the following is the best practices that you should follow when customizing a Constellation application? (Choose One)

- A. Override the mixins and CSS within an application-specific skin that inherits from CosmosSkin.
- B. Build portals by using a multi-page dynamic container so that it is easier to work using multiple tabs.
- C. Do not customize the out-of-the-box user portals, as doing so leads to upgrade issues.
- D. Build UI rules in Dev Studio to have more flexibility.

정답: C

질문 # 13

Which of the following is true about using Stream Services in background processing?

- A. Stream Services cannot be used for data flows and can only be used with agents.
- B. Stream Services are designed for high-volume, low-latency data processing.
- C. Stream Services are primarily used for processing file inputs.
- D. Stream Services are suitable only for real-time processing and not for background tasks.

정답: B

질문 # 14

An airline service allows flight bookings from 10 days before a flight to 1 hour before the flight departure time. There can be multiple reservations and a reservation can be cancelled until 2 hours before the departure time. A flight case represents an actual flight instance.

Which of the following options best suits implementation of limited availability and concurrent reservations?

- A. Reservations as a sibling case to the flight case.
- B. Reservations are part of the flight case as an embedded page.
- C. Reservation is data with reference to flight cases.
- D. Reservations as child cases to the flight case.

정답: C

질문 # 15

Which two statements are true about the industry foundation data model? (Choose Two)

- A. The industry foundation data model can only be used as a built-on application in conjunction with Pega Platform applications.
- B. As much as possible, best practice is to use the industry foundation data model as it is.
- C. The industry foundation data model of Pega Platform provides the data model specific to the industry which may be reused / extended as much as possible.
- D. Data pages that are provided by the industry foundation data model need to be extended for each external integration.

정답: B,C

질문 # 16

The Lead System Architect (LSA) team works on a Pega Platform implementation for a global car manufacturing company. The same models are available in all regions. However, the specifications change between countries. For example, emissions standards are different. Customers can contact a global customer service representative (CSR) for details about the vehicle specifications in their region.

The CSRs capture details from the customers about the model they are interested in and the country in which they live.

To compare the differences in the vehicle specifications for their country, the customers can input different model numbers.

However, their country remains constant. The company updates the vehicle details only once a year. The LSA team is tasked with creating a best-performing screen to display the specifications of the selected vehicle models.

Which of the following design approaches is best to implement the requirements?

- A. Design a data page to load asynchronously with all models and country as parameters. Every change in the model or country input reloads the page from the clipboard and avoids the trip to the database.
- B. Design a data page with models and country as parameters. Every change in the input combination will create a page on the clipboard. If the same set of inputs repeats, then the system reloads the page from the clipboard and avoids a trip to the database.
- C. Design a data page with country as a parameter and use model as a key in keyed page access. Every change in the model input reloads the page from the clipboard. If the country input is new, then retrieve the data from the database.
- D. Design a data page to load once each interaction, with model and country as parameters. Every change in the model or country input reloads the page from the clipboard and avoids the trip to the database.

정답: C

질문 # 17
