- A. diagnose ztna status
- B. get system ztna status
- C. diagnose debug application ztna
- D. get ztna policy-status

NEW QUESTION # 51
Which FortiSASE feature ensures least-privileged user access to all applications?

- A. secure web gateway (SWG)
- B. thin branch SASE extension
- C. zero trust network access (ZTNA)
- D. SD-WAN

Answer: C

Explanation:
Zero Trust Network Access (ZTNA) is the FortiSASE feature that ensures least-privileged user access to all applications. ZTNA operates on the principle of "never trust, always verify," providing secure access based on the identity of users and devices, regardless of their location.
Zero Trust Network Access (ZTNA):
ZTNA ensures that only authenticated and authorized users and devices can access applications.
It applies the principle of least privilege by granting access only to the resources required by the user, minimizing the potential for unauthorized access.
Implementation:
ZTNA continuously verifies user and device trustworthiness and enforces granular access control policies.
This approach enhances security by reducing the attack surface and limiting lateral movement within the network.
FortiOS 7.2 Administration Guide: Provides detailed information on ZTNA and its role in ensuring least-privileged access.
FortiSASE 23.2 Documentation: Explains the implementation and benefits of ZTNA within the FortiSASE environment.
