

## 2V0-17.25考題寶典， 2V0-17.25考題套裝

P.S. VCESoft在Google Drive上分享了免費的、最新的2V0-17.25考試題庫：<https://drive.google.com/open?id=1Yonwn2k17rXVWsAb9AC5YTcF7o9WU5OG>

現在很多IT專業人士都一致認為VMware 2V0-17.25 認證考試的證書就是登上IT行業頂峰的第一塊墊腳石。因此VMware 2V0-17.25認證考試是一個很多IT專業人士關注的考試。

### VMware 2V0-17.25 考試大綱：

主題	簡介
主題 1	<ul style="list-style-type: none"> <li>VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi, clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment.</li> </ul>
主題 2	<ul style="list-style-type: none"> <li>IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies.</li> </ul>

主題 3	<ul style="list-style-type: none"> <li>• Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation.</li> </ul>
主題 4	<ul style="list-style-type: none"> <li>• Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments.</li> </ul>

## 2V0-17.25考題套裝 - 2V0-17.25在線考題

VCESoft是一個可以成就很多IT人士的夢想的網站。VCESoft能為參加IT相關認證考試的考生提供他們想要的資料來助幫助他們通過考試。你還在為通過VMware 2V0-17.25認證考試苦惱嗎？你有想過購買VMware 2V0-17.25認證考試相關的課程來輔助你嗎？VCESoft可以為你提供這個便利，VCESoft提供的培訓資料可以有效地幫你通過認證考試。VCESoft提供的練習題幾乎真題是一樣的。有了VCESoft為你提供的精確的VMware 2V0-17.25認證考試的練習題和答案，你可以以高分通過VMware 2V0-17.25認證考試。

### 最新的 VCP-VCF Administrator 2V0-17.25 免費考試真題 (Q33-Q38):

#### 問題 #33

Which two steps should an administrator perform to configure the backup of the VMware Cloud Foundation (VCF) SDDC Manager and NSX components to allow them to be recovered in the event of a full site failure? (Choose two.)

- A. Define a scheduled task in vCenter to create a snapshot of the NSX Edge cluster.
- B. Configure the backup settings in SDDC Manager.
- C. Prepare an external SFTP server to store file-based backups.
- D. Backup the NSX Manager configuration by exporting it to an archive file.
- E. Configure image-based backup for the NSX Manager cluster.

答案：B,C

#### 解題說明：

Comprehensive and Detailed Explanation From Exact Extract:

According to the official VMware Cloud Foundation 5.2 Administration Guide and VMware NSX Data Center documentation, the required and recommended steps to enable proper backup and recovery for the SDDC Manager and NSX Manager components are as follows:

Option B: Configure the backup settings in SDDC Manager.

Exact Extract from official documentation:

"You must configure backup settings in SDDC Manager to ensure scheduled, automated backups of critical SDDC Manager configuration and inventory data. Backups are stored as files that can be used to restore SDDC Manager in case of a failure or disaster." (VMware Cloud Foundation Administration Guide - Backing Up SDDC Manager) Option D: Prepare an external SFTP server to store file-based backups.

Exact Extract from official documentation:

"Configure an external SFTP server to store SDDC Manager backup files. SDDC Manager supports only file-based backups using SFTP as the storage protocol." (VMware Cloud Foundation Administration Guide - Configuring Backup Destinations) Why Not the Other Options?

Option A: Exporting an archive file from NSX Manager is a manual method and does not constitute a complete, restorable backup suitable for full site failure recovery.

Option C: Image-based backups for NSX Manager are not supported and can cause issues with the integrity and recoverability of

NSX appliances, as per VMware best practices.

Option E: Snapshots of the NSX Edge cluster are not supported for backup and recovery; VMware specifically advises against using snapshots for backup purposes of NSX appliances.

Summary:

The administrator must configure the backup settings in SDDC Manager (B) and prepare an external SFTP server (D) to enable secure, automated, and restorable backups of SDDC Manager and NSX components, as recommended and required by the official VMware Cloud Foundation 5.2 documentation.

#### 問題 #34

An administrator is responsible for monitoring VMware vSAN performance across a VMware Cloud Foundation (VCF) instance. The administrator confirms VCF Operations is configured correctly. When viewing Storage Operations, the vSAN Cluster Performance widget is not displaying any data. What additional configuration should the administrator complete to ensure the widget displays data?

- A. Enable Support Insight for all vSAN Clusters in vCenter.
- B. Select "Enable SMART data collection" in the vCenter integration.
- C. Select a Cloud proxy as Collector in the vSAN integration.
- **D. Enable Performance Service for all vSAN Clusters in vCenter.**

答案： D

解題說明：

The vSAN Performance Service must be enabled in vCenter Server for each vSAN cluster to collect and visualize performance statistics in VCF Operations. Without this service, performance dashboards and widgets will not display data.

#### 問題 #35

An administrator needs to scale out the VMware Cloud Foundation (VCF) Automation node from a small to a medium form factor. The environment is currently deployed using the Simple VCF Automation Model. Which action should the administrator take to achieve this?

- **A. Scale out the VCF Automation deployment to a High Availability model with medium form factor.**
- B. Deploy a separate VCF Automation instance in the environment.
- C. Redeploy the VCF Automation node as a single medium form factor using the VCF Operations Console.
- D. Scale up the VCF Automation node to medium form factor using the VCF Operations Console.

答案： A

解題說明：

VCF 9.0 states for the Simple Automation model: "Single node... Applies to Small... Can be scaled out to the high availability model by resizing the node to Medium or Large, which also forces the scale out to 3 nodes." In addition, the Day-N procedure confirms the action is a Scale (scale-out) operation: "Scale VCF Automation... choose a larger target deployment type such as Medium or Large..." and provide "Additional VIPs" and a "Cluster Node IP Pool" (Medium requires a minimum of four IPs), then submit the scale out request. Therefore, moving from Small (Simple) to Medium necessarily transitions to the High Availability (3-node) model rather than remaining a single medium node. This aligns the form factor with the documented model behavior and the fleet management workflow.

#### 問題 #36

Resource Pools in vSphere primarily help in:

- A. Securing the VM traffic by isolating virtual networks
- **B. Organizing and dividing compute resources among groups of VMs**
- C. Enabling real-time replication of data across multiple hosts
- D. Creating VLANs dynamically for each virtual machine

答案： B

解題說明：

Resource Pools allow administrators to group virtual machines and apply specific CPU and memory resource constraints, helping

ensure certain performance levels or service quality for different workloads.

### 問題 #37

An administrator is deploying a new VCF instance in an existing fleet. Which three components must be deployed? (Choose three.)

- A. VCF Automation
- B. vSphere Supervisor
- C. VCF Installer
- D. vCenter
- E. SDDC Manager
- F. NSX Manager

答案: D,E,F

解題說明:

Each new VCF instance requires its own management domain consisting of vCenter Server, NSX Manager cluster, and SDDC Manager.

vCenter (A) is required to manage ESXi hosts and clusters.

NSX Manager (D) provides software-defined networking for the instance.

SDDC Manager (E) is the lifecycle and management component central to each VCF instance.

### 問題 #38

.....

你想参加VMware的2V0-17.25认证考试吗?你身边肯定有很多人参加过这个考试了吧?因为这是一个很重要的考试,如果取得这个考试的认证资格,你将可以得到很多的好处。那麼,你想別人請教怎樣通過考試的方法了嗎?準備考試的方法有很多種,但是最高效的方法是用一個好的工具。那麼對你來說什麼才是好的工具呢?當然是VCESoft的2V0-17.25考古題了。
