300-720 Dumps - Securing Email with Cisco Email Security Appliance Exam Questions [2026]

If you get our 300-720 training guide, you will surely find a better self. As we all know, the best way to gain confidence is to do something successfully. With our 300-720 study materials, you will easily pass the 300-720 examination and gain more confidence. As there are three versions of our 300-720 preparation questions: the PDF, Software and APP online, so you will find you can have a wonderful study experience with your favorite version.

Conclusion

Being an Email security specialist, you need to ensure that you have the relevant skills to safeguard your organization's email systems. The Cisco 300-720 is a test for these skills and it is there to evaluate how good you are with the associated skills. By taking and passing this exam, you will prove to your current and prospective employers that you are well versed with your job and the use of Cisco ESA. Training with an official course and learning with self-study materials like guides will bring more value to your preparation and success in the actual evaluation.

Cisco Securing Email with Cisco Email Security Appliance Sample Questions (Q50-Q55):

NEW QUESTION # 50

What is a benefit of deploying Cisco Secure Email and Web Manager?

- A. centralized management of software updates for Cisco Secure Email Gateway

- B. centralized management of logs for Cisco Secure Email Gateway
- C. centralized management of botnet directories
- **D. centralized management of quarantined email**

Answer: D

Explanation:

One of the benefits of deploying Cisco Secure Email and Web Manager is that it provides centralized management of quarantined email for multiple Cisco Secure Email Gateway appliances. The administrator can use the Cisco Secure Email and Web Manager to view, search, release, delete, or forward quarantined messages from a single web interface. Reference: [Cisco Secure Email and Web Manager User Guide - Configuring Centralized Spam Quarantine]

NEW QUESTION # 51

What is the default behavior of any listener for TLS communication?

- A. preferred-verify
- B. required
- **C. off**
- D. preferred

Answer: C

NEW QUESTION # 52

The CEO added a sender to a safelist but does not receive an important message expected from the trusted sender. An engineer evaluates message tracking on the Cisco Secure Email Gateway appliance and determines that the message was dropped by the antivirus engine. What is the reason for this behavior?

- A. Administrative access is required to create a safelist.
- **B. End-user safelists apply to antispam engines only.**
- C. The sender didn't mark the message as urgent
- D. The sender is included in an ISP blocklist

Answer: B

Explanation:

The reason why the CEO did not receive an important message expected from a trusted sender after adding them to a safelist is because end-user safelists apply to antispam engines only. End-user safelists are lists of sender addresses or domains that end users can create and manage through their quarantine accounts or email clients. End-user safelists allow end users to accept or exempt messages from certain senders or domains from being identified as spam by the antispam engines. However, end-user safelists do not affect other filtering engines such as antivirus, outbreak filters, or content filters. NEW QUESTION # 53

A company has deployed a new mandate that requires all emails sent externally from the Sales Department to be scanned by DLP for PCI-DSS compliance. A new DLP policy has been created on the Cisco ESA and needs to be assigned to a mail policy named 'Sales' that has yet to be created.

Which mail policy should be created to accomplish this task?

- A. Preliminary Mail Policy
- **B. Outgoing Mail Policy**
- C. Incoming Mail Flow Policy
- D. Outgoing Mail Flow Policy

Answer: B

NEW QUESTION # 54

Which method enables an engineer to deliver a flagged message to a specific virtual gateway address in the most flexible way?

- A. Apply a filter on the message.
- B. Map the envelope sender address to the host.
- C. Issue the altsrhost command.
- D. Set up the interface group with the flag.

Answer: A

Explanation:

A filter is a method that enables an engineer to deliver a flagged message to a specific virtual gateway address in the most flexible way. A filter is a rule that allows Cisco ESA to perform actions on messages based on predefined or custom conditions, such as headers, envelope, body, attachments, etc.

To deliver a flagged message to a specific virtual gateway address using a filter, the engineer can create a content filter or message filter that matches the flag condition and applies an action of "deliver via alternate host" with the virtual gateway address as the parameter.

The other options are not methods that enable an engineer to deliver a flagged message to a specific virtual gateway address in the most flexible way, because they have more limitations or requirements than using a filter.

NEW QUESTION # 55

.....

Cisco guarantees that if you use the product, you will pass the 300-720 exam on your first try. Its primary goal is to save students time and money, not just conduct a business transaction. Candidates can take advantage of the free trials to evaluate the quality and standard of the 300-720 Dumps before making a purchase. With the right Cisco 300-720 study material and support team passing the examination at first attempt is an achievable goal.
