Our UiPath-AAAv1 practice guide well received by the general public for immediately after you have made a purchase for our UiPath-AAAv1 exam prep, you can download our UiPath-AAAv1 study materials to make preparations for the exams. It is universally acknowledged that time is a key factor in terms of the success of exams. The more time you spend in the preparation for UiPath-AAAv1 Learning Engine, the higher possibility you will pass the exam.

If you fail in the exam with our UiPath-AAAv1 quiz prep we will refund you in full at one time immediately. If only you provide the proof which include the exam proof and the scanning copy or the screenshot of the failure marks we will refund you immediately. If any problems or doubts about our UiPath-AAAv1 exam torrent exist, please contact our customer service personnel online or contact us by mails and we will reply you and solve your doubts immediately. Before you buy our product, you can download and try out it freely so you can have a good understanding of our UiPath-AAAv1 Quiz prep. Please feel safe to purchase our UiPath-AAAv1 exam torrent any time as you like. We provide the best service to the client and hope the client can be satisfied.

Actual UiPath UiPath-AAAv1 Exam Questions – Smart Strategy to Get Certified

Experts at BraindumpsPass have also prepared UiPath UiPath-AAAv1 practice exam software for your self-assessment. This is especially handy for preparation and revision. You will be provided with an examination environment and you will be presented with actual UiPath-AAAv1 Exam Questions. This sort of preparation method enhances your knowledge which is crucial to excelling in the actual UiPath UiPath-AAAv1 certification exam.

UiPath Certified Professional Agentic Automation Associate (UiAAA) Sample Questions (Q14-Q19):

NEW QUESTION # 14

An agent uses Web Search, Slack integration, and a custom process to resolve IT support tickets. The agent must:

- * Retrieve relevant troubleshooting steps from the web.
- * Notify the user via Slack if a solution is found.
- * Escalate unresolved tickets via a custom process.

Which evaluation strategy ensures comprehensive coverage while avoiding redundancy?

- A. Create more than 30 evaluations for Slack notifications, more than 30 for web searches, and more than 30 for escalation processes.
- B. Create 30 evaluations for Slack notifications, 30 for web searches, and 30 for escalation processes.
- C. Use random input sampling across all tools and rely on the default "LLM-as-a-Judge" assertion.
- D. Group evaluations into sets: Valid web results triggering Slack notifications, Invalid web results triggering escalations, Edge

cases.

Answer: D

Explanation:

C is correct - UiPath recommends structuring agent evaluations around functional sets that align with expected behavior and edge conditions. This strategy:

- * Validates end-to-end logic, not just isolated tool usage
- * Helps assess whether tool combinations work as designed
- * Supports traceable diagnosis of failures or regressions

In this scenario:

- * Set 1: Valid Web Search results # Slack notification (success path)
- * Set 2: Failed/irrelevant Web Search # Escalation (fallback path)
- * Set 3: Edge cases (e.g., ambiguous input, multiple valid matches)

This avoids the redundancy and volume bloat seen in options B and D.

Option A is too loose - relying solely on random inputs and "LLM-as-a-Judge" introduces risk of incomplete testing.

Grouping by real-world interaction patterns mirrors how agents behave in production. It ensures high coverage while keeping evaluation efficient, consistent, and tightly aligned with business logic.

NEW QUESTION # 15

How does the impact and feasibility matrix assist in prioritizing agentic automation use cases?

- A. By focusing solely on high-impact use cases without considering whether implementing them is feasible with available resources.
- B. By prioritizing the automation of all processes regardless of their feasibility or actual impact on the organization.
- **C. By evaluating use cases based on their potential business improvement and ease of implementation considering current resources and technology.**
- D. By identifying all feasible use cases without considering the potential impact or business benefit of implementing them.

Answer: C

Explanation:

The correct answer is C - UiPath's Impact and Feasibility Matrix is a structured tool used in the discovery and prioritization phase of agentic automation. It enables teams to evaluate and rank automation opportunities based on two key dimensions:

- * **Impact:** The business value delivered - including time savings, risk reduction, efficiency, or user experience improvement.
- * **Feasibility:** How practical or cost-effective it is to implement - considering technical complexity, data availability, resource constraints, and integration readiness.

This matrix helps classify use cases into quadrants such as:

- * Quick Wins (High Impact, High Feasibility)
- * Strategic Bets (High Impact, Low Feasibility)
- * Do Later (Low Impact, High Feasibility)
- * Avoid or Backlog (Low Impact, Low Feasibility)

UiPath emphasizes that this method ensures teams focus efforts where agentic automation can create real business value quickly - avoiding wasted time on low-priority or hard-to-execute ideas.

Options A and B are partial approaches that ignore one of the two axes.

D is incorrect - not all processes should be automated, especially if they're low-value or high-risk.

This balanced framework is a core part of UiPath's Agentic Design Blueprint methodology for aligning automation with strategic priorities.

NEW QUESTION # 16

What is the significance of the "as-is" process map in identifying agentic automation opportunities?

- A. It establishes the goals of the new process, serving as a foundation to later create the "to-be" process map.
- B. It directly outlines the roles that agents will assume in the optimized process, ensuring alignment with automation requirements.
- **C. It defines the current way tasks are performed, helping to highlight inefficiencies, bottlenecks, and areas for improvement that can uncover automation potential.**
- D. It serves as a finalized map of processes ready for automation, removing the need for further adjustments or workshops.

Answer: C

Explanation:

The correct answer is A- the "as-is" process map is a foundational tool in UiPath's Agentic Blueprint Design framework. It visualizes the current state of how work is performed, enabling teams to:

- * Identify manual, repetitive, or time-consuming tasks
- * Spot delays, rework loops, or human bottlenecks
- * Discover areas where agents can augment or replace tasks

It acts as a baseline diagnostic, not an implementation-ready flow.

This is a key step in workshops led by process owners or business SMEs, before designing the "to-be" process where agents are introduced.

B is incorrect - the as-is map is not final.

C refers to the optimized state, not the current one.

D confuses the mapping's role - it captures the present, not the goals.

NEW QUESTION # 17

Why is it important to include examples in prompts?

- A. Including examples guarantees output accuracy without any need for further adjustments or refinements.
- B. Including examples should only focus on edge cases while ignoring typical scenarios for better variety in results.
- **C. Carefully chosen examples help guide the agent and improve its ability to generalize across different scenarios.**
- D. Examples should be omitted to allow the AI to create responses entirely from general knowledge without guidance.

Answer: C

Explanation:

Dis correct - including well-designed examples in prompts is a key part of few-shot learning, which helps LLM-based agents better understand the task structure, output style, and expected behavior.

UiPath encourages the use of examples for:

- * Classification (e.g., labeling sentiment, email categories)
- * Transformation tasks (e.g., turning unstructured text into tables)
- * Step-by-step instructions (e.g., troubleshooting flows)

These examples serve two purposes:

- * Pattern induction: The model picks up on consistent structures or rules used across examples.
- * Generalization: With diverse examples, the agent can apply logic to unseen but similar cases.

Best practice:

- * Use typical, real-world examples representative of the data the agent will encounter.
- * Keep formats clear and consistent across input-output pairs.
- * Pair examples with explicit instructions in the system or user prompt.

Option A is flawed - focusing only on edge cases can confuse the model.

B is false - omitting examples forces the LLM to guess the structure, reducing accuracy.

C is misleading - examples improve performance but do not guarantee perfect output; testing and evaluation are still required.

In short, prompt engineering with examples is essential to building reliable, generalizable, and scalable AI agents.

NEW QUESTION # 18

When you want a connector field value to be inferred dynamically at run time, which input method should you select in the activity tool?

- A. Static value
- **B. Argument**
- C. Clear value
- D. Prompt

Answer: B

Explanation:

The correct answer is D- selecting "Argument" allows a field value in an activity (such as a connector or tool call) to be dynamically inferred at runtime, based on variables, agent state, or previous node outputs.

UiPath Autopilot™ and Studio Web use the "Argument" option in activity configuration to pass dynamic values, especially in agentic

workflows where:

- * Outputs of one step must inform inputs of the next
- * Contextual reasoning or prompt outputs need to feed tool parameters
- * Escalation decisions or classifications affect API calls or record updates This is fundamental in making agent behavior adaptive and responsive to user context- a key trait of UiPath's agentic orchestration layer.

Other options:

- * A (Static value) is hardcoded
- * B (Clear value) wipes any existing input
- * C (Prompt) is used when engaging the LLM, not connectors
