

Acquia Drupal-Site-Builder Originale Fragen, Drupal-Site-Builder Fragen Beantworten

ZertPruefung ist eine Website, die die Erfolgsquote von Acquia Drupal-Site-Builder Zertifizierungsprüfung erhöhen kann. Die erfahrungsreichen IT-Experten entwickeln ständig eine Vielzahl von Programmen, um zu garantieren, dass Sie die Acquia Drupal-Site-Builder Zertifizierungsprüfung 100% erfolgreich bestehen können. Die Trainingsmaterialien von ZertPruefung sind sehr effektiv. Viele IT-Leute, die die Acquia Drupal-Site-Builder Prüfung bestanden haben, haben die Prüfungsfragen und Antworten von ZertPruefung benutzt. Mit Hilfe des ZertPruefung haben viele auch die Acquia Drupal-Site-Builder Zertifizierungsprüfung bestanden. Wenn Sie ZertPruefung wählen, kommt der Erfolg auf Sie zu.

Wenn Sie unsere Prüfungsmaterialien zur Acquia Drupal-Site-Builder Zertifizierungsprüfung kaufen, wird ZertPruefung Ihnen den besten Service und die beste Qualität bieten. Unsere Acquia Drupal-Site-Builder Zertifizierungssoftware wird schon von dem Anbieter und dem Dritten autorisiert. Außerdem haben wir auch viele IT-Experten, die nach den Bedürfnissen der Kunden eine Serie von Produkten laut dem Kompendium bearbeitet. Die Materialien zur Acquia Drupal-Site-Builder Zertifizierungsprüfung haben einen hohen Goldgehalt. Sie können von den Experten und Gelehrte für Forschung benutzt werden. Sie können alle unseren Produkte teilweise als Probe vorm Kauf umsonst benutzen, so dass Sie die Qualität sowie die Anwendbarkeit testen können.

Drupal-Site-Builder Fragen Beantworten, Drupal-Site-Builder PDF Testsoftware

Wenn Sie ZertPruefung wählen, kommt der Erfolg auf Sie zu. Die Examsfragen zur Acquia Drupal-Site-Builder Zertifizierungsprüfung wird Ihnen helfen, die Prüfung zu bestehen. Die Simulationsprüfung vor der Acquia Drupal-Site-Builder Zertifizierungsprüfung zu machen, ist ganz notwendig und effizient. Wenn Sie ZertPruefung wählen, können Sie 100% die Prüfung bestehen.

Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Drupal-Site-Builder Prüfungsfragen mit Lösungen (Q49-Q54):

49. Frage

The site you are managing has a "Comments approval" process. You have moderators with appropriate permissions to review and approve comments. The moderators want to see all the unapproved comments sorted by the node on which they are posted, but they can't do this on the Comments approval page.

What is the simplest way to solve this problem?

- A. Create an Export view, so the content editor can review comments in a spreadsheet.
- **B. Edit the Comments View, and update the table settings to make the Entity ID field sortable.**
- C. Have the content editor review comments by visiting the node instead of using the Comments page.
- D. Create a View of unapproved comments and set the sort order to "Entity ID."

Antwort: B

Begründung:

In Drupal 10 and Drupal 11, the administrative Comments listing is provided by the core comment View. In core's default `views.view.comment` configuration, the comments administration display uses the table style, includes the `entity_id` field labeled "Posted in", and that column is present in the table configuration.

However, core sets that column's table option to `sortable: false`, while other columns such as Subject, Author, and Updated are sortable. That is why moderators cannot sort the approval page by the content item the comment belongs to, even though the field is already there.

Because the existing approval page already uses a View, the simplest solution is to edit that View and enable sorting for the Entity ID / Posted in column in the table settings. Creating a brand-new View would work, but it is not the simplest option because it duplicates an existing administrative display. The other options do not address the actual issue with the current moderation screen. Drupal's content administration documentation also confirms that comments are managed from the Comments administration page, making improvement of that interface the most appropriate site-building solution.

50. Frage

You have created a new Article node with a title, an image and a body field. Your site is configured to use Drupal's core search. If you search for a phrase which is used in your new article, the article is not returned in the search results. Search is otherwise working correctly.

Why is your article not appearing in the search results?

- A. The core search module must be configured to recognize the search term.
- B. Drupal core search does not work very well, and you should use a contributed module for search instead.
- C. Cron has not run since you added the article, so Drupal has not indexed the new article yet.
- D. You did not check the "Add to search index" checkbox when creating your article.

Antwort: C

Begründung:

Drupal core search does not index newly created or updated content immediately in the default workflow.

According to the official Drupal core Search module overview, content actions such as creating, editing, or deleting content automatically mark the affected content items for indexing or reindexing at the next cron run.

Until cron runs, the new or changed content is not updated in the search index, so a newly created article may not appear in search results even though search is otherwise functioning correctly.

This makes option C the correct answer. The other options do not match Drupal core behavior. There is no normal site-building step where you configure core search to "recognize" a specific term, and Drupal does not provide an "Add to search index" checkbox when creating an article in core search. Also, while contributed search solutions exist, the question states that Drupal core search is already working correctly, so the missing result is best explained by indexing timing, not by a flaw requiring another module. Drupal's search documentation is explicit that cron is responsible for updating the index after content changes.

51. Frage

You have created a new Comment type, but when you try to add a comment field to a Content type, you can't select your new Comment type.

- A. "Allow comments" is not checked in the Content type settings.
- B. Custom comment types can only be added to default Content types.
- C. You need to clear the site caches to see the new option.
- D. In your new Comment type, you didn't select "Content" as the Target entity type.

Antwort: D

Begründung:

In Drupal, a comment field can only use comment types that are configured for the same target entity type as the entity you are attaching comments to. When you add a comment field to a Content type (node), Drupal expects a comment type whose Target entity type is Content. If the new comment type was created with another target entity type, such as custom block or user, it will not appear as a selectable option when adding that comment field to a content type. This is consistent with Drupal core's comment architecture and field behavior.

The other choices do not match Drupal's documented behavior. "Allow comments" is not a separate prerequisite checkbox that controls whether a comment type appears; instead, comments are enabled by adding a comment field to the content type. Drupal documentation for administering comment settings confirms that comment capability is added from Manage fields by adding or reusing a comment field. There is also no documented requirement that custom comment types work only on default content types,

and cache clearing is not described as the fix for this selection issue.

52. Frage

You are building a bi-lingual site which is in English and Spanish. You have created all the English content. How will you add Spanish translation to existing content?

- A. On the Content overview page, select all English content. Check "Import Translations" from the Bulk Actions dropdown.
- B. On Admin > Translate page, enable the Add Google Translations checkbox to import all Spanish translations.
- C. Download the Spanish .po files from localize.drupal.org. Import the .po file.
- **D. On the Translate tab of each node, add Spanish translations manually.**

Antwort: D

Begründung:

In Drupal 10 and Drupal 11, content translation is handled through the Content Translation module, which allows you to translate individual content entities (such as nodes). Once multilingual support is enabled and a new language (Spanish) is added, each piece of content provides a Translate tab where translations can be created and managed.

Drupal's User Guide explains that to translate existing content, you navigate to the content item and use the Translate tab to add a translation in the desired language. This process allows editors to manually enter translated content for each field, ensuring accuracy and proper localization.

Option B is incorrect because Drupal core does not provide automatic Google translation import functionality.

Option C refers to interface translation (.po files), which is used for translating the Drupal UI, not site content.

Option D is incorrect because Drupal does not provide a bulk "Import Translations" action for node content in this manner.

Therefore, the correct and documented approach is to manually add translations via the Translate tab for each content item, making A the correct answer.

53. Frage

Your website has a content type named "Cars for sale" with a Taxonomy reference field for "Manufacturer" vocabulary. You have a view listing all the cars for sale. You wish to display different background colors to the cars rows based on the value of the Manufacturer field.

How can you add a CSS class to each row of the view based on the value of the Manufacturer field?

- **A. Add the field token for Manufacturer field as a Row class in the Format > Settings of the display.**
- B. Add a new custom field to the view named CSS class and add a field token for Manufacturer field as values.
- C. Add an attachment to the view that use field token for the Manufacturer field as CSS class values to all rows
- D. Add the field token for the Manufacturer field under group-by options of the display.

Antwort: A

Begründung:

In Drupal 10 and Drupal 11 Views, the correct place to add a CSS class to each rendered row is the Format # Settings # Row class option. Drupal core's Views API shows that style plugins can provide a Row class text field, and when the display uses fields, this option explicitly supports field tokens. The documentation in core states: "You may use field tokens ... for all fields." That means you can add the Manufacturer field to the View and use its token in the Row class setting so each row gets a class derived from that field's value.

Drupal then token-replaces the value for each row and sanitizes it into a valid CSS identifier.

The other options do not match how Drupal Views handles per-row CSS classes. Attachments do not assign row classes to the main display, a separate custom field is not required for this built-in capability, and group- by options are for grouping results rather than applying row-level CSS classes. So the Drupal-native, documented method is to put the Manufacturer field token directly into the Row class setting in the display's Format settings.

54. Frage
