B2C-Commerce-Architect Valid Exam Format, B2C-Commerce-Architect Upgrade Dumps

For candidates who are going to buying B2C-Commerce-Architect exam materials, the pass rate for the exam is quite important, and it will decide whether you can pass your exam successfully or not. Pass rate for is 98.65% for B2C-Commerce-Architect exam materials, and if you choose us, we can help you pass the exam just one time. In addition B2C-Commerce-Architect Exam Materials are high quality and accuracy, and they can improve your efficiency. We are pass guarantee and money back guarantee for B2C-Commerce-Architect exam dumps, if you fail to pass the exam, we will give you full refund.

Salesforce Certified B2C Commerce Architect Sample Questions (Q11-Q16):

NEW QUESTION # 11

An Order Management System (OMS) handles orders from multiple brandspecific sites, as part of the processing, the OMS sends the processing detail to be added at notes to the orders in B2C Commerce. These processing details are captured temporarily in custom objects, and are later processed by a batch Job that:

- * Processes the custom object to extract the orderid and note data.
- * Tries to load the order.
- * If the order is not found, it deletes the custom object and moves on.
- * If the order is found, it updates notes In the Order, upon successful update of this order, it deletes the custom object.

There is an Issue reported that the job is constantly failing and custom objects are growing in number. On investigating the production look the message below is being logged on each failure:

What are three solution The Architect can take to fix this issue without losing meaningful data?

Choose 3 answers

- A. Take the backup of the Order as XML and delete the notes from Order to ensure on the next job run the custom objects are getting processed.
- B. Using BM site import/export, soften the <quota id="object.orderPo.relation.notes"> <custom-action>warn<custom-action> </quot> to make sure that neither order notes are lost and custom object is processed.
- C. Take the backup of the Order as XML and delete the Order to ensure on the next job run, the custom objects are getting processed.
- D. Take the backup of the custom object and delete the custom object to ensure on the next job run the custom objects are getting processed.
- E. Engage B2C Commerce Support Team to soften the quota limit for "object.OrderPO.relation.notes"

Answer: A,D,E

Explanation:

When facing an issue with a growing number of custom objects due to the exceeded quota limit for order notes, effective solutions include:

Option C (Take the backup of the custom object and delete the custom object): This ensures that the data is preserved while freeing up space for new processes and reducing the load, allowing the job to continue running without the impediment of quota limits.

Option D (Engage B2C Commerce Support Team to soften the quota limit for 'object.OrderPO.relation.notes'): Increasing the quota limit can resolve the root cause of the issue by accommodating the actual business needs without compromising the integrity of order processing and note addition.

Option E (Take the backup of the Order as XML and delete the notes from Order): This allows the job to process the custom objects as intended in subsequent runs by clearing out space while ensuring the order data remains intact for business needs.

These steps address the quota limit issue effectively without losing valuable order or note data, ensuring continuity and integrity of business operations.

NEW QUESTION # 12

A client receives multiple feeds from third parties on the same SFTP location:

- * Product prices (sftp: prod/prices)
- * Stores information (sftp: prod/stores;
- * Product information (sftp: prod/catalog)
- * Categories information (sftp: prod/marketing)
- * Content (sftp: prod/marketing)

Some of the feeds are placed on sftp multiple times a day, as the information is updated in the source system.

The Architect decides to have only two jobs:

- * One that checks and downloads available feeds every hour
- * One that imports the files from Webdav once a day before the data replication, using the standards steps available in the Job Framework. Which design is correct for the import Job, taking the steps scope in consideration?

- A. - four sibling flows execute steps in parallel: import products, stores, prices, content- last flow executes steps in sequence: import categories, reindex
- B. - three sibling flows import steps in parallel: import products, stores, prices- fourth flow executes: import categories- last flow executes steps in sequence: reindex, import content
- C. - Four sibling flows execute steps in parallel: import products, stores, price, content- last flow executes steps in sequence: import:categories, reindex
- D. - four sibling flows execute steps in parallel: import products, stores, prices, content- fifth flow executes: import categories- last flow executes steps in sequence: reindex

Answer: A

Explanation:

This design maximizes efficiency and concurrency. By having the jobs that import products, stores, prices, and content run in parallel, the system can handle multiple data streams simultaneously, reducing total processing time. The sequential execution of importing categories followed by reindexing ensures that all new and updated information is properly indexed and available for site use, following the completion of the import of more frequently updated data. This order respects dependencies between steps and aligns with best practices for handling complex data workflows in B2C Commerce environments.

NEW QUESTION # 13

During discovery, the customer required a feature that is not inducted in the standard Storefront Reference Architecture (CSFRA). In order to save budget, the Architect needs to find the quickest way to implement this feature.

What is the primary resource the Architect should use to search for an existing community Implementation of the requested feature?

- A. Salesforce Trailblazer Portal
- B. Salesforce B2C Commerce Documentation
- C. Salesforce Commerce Cloud Trailblazer community
- **D. Salesforce Commerce Cloud GitHub repository**

Answer: D

Explanation:

When seeking a community implementation of a feature not included in the standard Storefront Reference Architecture (SFRA), the primary resource should be the Salesforce Commerce Cloud GitHub repository (Answer A). This repository often contains projects and code samples contributed by other developers in the community, which might include custom implementations that could be adapted to meet the customer's requirements. This approach not only leverages existing solutions that have been shared publicly but also can significantly save time and resources in development.

NEW QUESTION # 14

A company that is a shoe-producer is doing Salesforce B2C Commerce implementation. In their Enterprise Resource Warning (ERP) system, the products are marked as being one of three types: boots, sandals, and sneakers. The business requirements based on the type are:

- * The messaging on Product Detail page is different
- * Customers are able to filter their Product Search Results

The customer's operations team asks about the format in which to send this value in the catalog.

Which data type should the Architect specify for this attribute In the Data Mapping document?

- A. A custom attribute type set-of-string containing multiple values.
- **B. A custom attribute of type enum-of-string (single selectable value)**
- C. A custom attribute of type enum-of-string (multiselect able value).
- D. A custom attribute of type string containing comma separated values.

Answer: B

Explanation:

For the shoe producer implementing Salesforce B2C Commerce, the attribute used to specify the type of shoes (boots, sandals, sneakers) should be set as a single selectable value, hence the use of an enum-of-string type. This data type allows for the selection of one option from a predefined list, which is ideal for cases where each product can only be categorized into one type. This ensures that data integrity is maintained while providing clear and distinct categorization that can easily be used for filtering on the Product Search Results page and for customized messaging on the Product Detail page.

NEW QUESTION # 15

An Architect has been approached by the Business with a request to create a custom product finder. The finder would initially be available on only one site, and would eventually be extended to be available on all sites the Business maintains. There is a requirement that these wrings art also available to be used in a Job context for export to other systems.

Each site will have a different category avertable for use by the product finder.

Where should the Architect store the custom settings for use on both the storefront and in a job context?

- A. Jobs Framework parameters
- B. Category custom attributes
- **C. Custom Object with a Site Scope**
- D. Custom Object with an Organizational Scope

Answer: C

NEW QUESTION # 16
