試験の準備方法-効果的な1z0-1075-25的中問題集試験-実際的な1z0-1075-25復習攻略問題

あらゆる種類の問題に取り組まれる可能性があります。時には、何かを下に置いて他の問題に対処する必要があります。後者はより緊急であり、すぐに実行する必要があります。1z0-1075-25トレーニングガイドの助けを借りて、あなたの夢がもう遅れることはありません。なぜなら、私たちはクライアントがよりゆっくと勉強するのを支援するインテリジェントなアプリケーションと高効率のメリットを持っているからです。1z0-1075-25の実際の試験で20~30時間準備する場合、1z0-1075-25試験はあなたの前で簡単になります。

Oracle Manufacturing Cloud 2025 Implementation Professional 認定 1z0-1075-25 試験問題 (Q12-Q17):

質問 # 12

A Plant Manager bought several machines for their ABC manufacturing plant. The plant is set up with a separate cost element set, ABC, in Manufacturing Cloud.

How must the Plant Manager configure these machines so that they are costed to the work order for which operations are performed on them?

- A. Set up the machines with a cost element type of "Overhead " by selecting Cost Element Set ABC.
- **B. Set up the machines with a cost element type of " Resource " by selecting Cost Element Set ABC.**
- C. Set up the machines with a cost element type of "Overhead " by selecting Cost Element Set Common.
- D. Set up the machines with a cost element type of " Resource " by selecting Cost Element Set Common.

正解: B

解説:

When configuring machines that will be used in production operations and will incur costs associated with work orders, the correct setup for these machines involves:

* Setting up the machines as a "Resource" in the cost element set ABC : This allows the machines to be directly associated with the work orders for which they are used, ensuring that their costs are appropriately tracked and charged to the work order. Resources include equipment, labor, and other direct costs involved in production.

Incorrect options:

* "Overhead" (B, D) : Overhead costs typically represent indirect costs, not the direct usage of machines in production.

* Cost Element Set Common (A) : Since the plant uses a separate cost element set (ABC), the machines must be assigned to this specific set, not the Common cost element set.

Oracle Manufacturing Cloud documentation on Cost Element Setup for resources and overheads outlines how machines and other resources are configured for costing purposes.

質問 # 13

Your customer needs to add additional information to their work order traveler. Which statement is NOT true about the Extensible Work Order Traveler?

- A. You can generate the Extensible Work Order Traveler report only from the Review Dispatch List and Manage Supplier Operations pages.
- B. Operators can invoke it by using the Generate Extensible Work Order Traveler Report task.
- C. The production operator can invoke It from the Manage Work Orders, Review Dispatch ust. and Manage Supplier Operations pages.
- D. You use Page Composer to display only the required actions.
- E. It is a critical document that travels with the physical material during production.

正解: A

解説:

The Extensible Work Order Traveler is a customizable report that contains detailed information about a work order and travels with the physical material during production. The statement that is not true is:

* Statement A is incorrect because the Extensible Work Order Traveler report can be generated from multiple locations within Oracle Manufacturing Cloud, including the Manage Work Orders, Review Dispatch List , and Manage Supplier Operations pages. It is not limited to only the Review Dispatch List and Manage Supplier Operations pages.

Correct statements:

* Statement B : The Extensible Work Order Traveler is a critical document used to communicate work order details during the production process.

* Statement C : Production operators can invoke the traveler from several key pages like Manage Work Orders and Review Dispatch List.

* Statement D : Operators can use the task "Generate Extensible Work Order Traveler Report" to invoke the report.

* Statement E : You can use Page Composer to customize the Extensible Work Order Traveler and display only the required actions, allowing flexibility in what information is presented.

Oracle Cloud documentation on the Extensible Work Order Traveler explains how the report can be invoked from various areas within the application and how it can be customized using Page Composer.

質問 # 14

To help ensure compliance with the US Code of Federal Regulations (21 CFR Part 11), your client wants to enable audit trail for manufacturing work definitions and standard operations.

Which is NOT included in the audit trail for standard operations such as creation, update, and deletion?

- A. Operation resources. Including alternate resources
- B. Work definition header and version attributes
- C. Item structure component attributes referenced from Product Information Management(PIM)
- D. Descriptive flexfields (OFFs) at any level
- E. Attachments at any level

正解: C

解説:

When enabling audit trail functionality to ensure compliance with the US Code of Federal Regulations (21 CFR Part 11), certain actions related to work definitions and standard operations are audited for changes such as creation, update, and deletion. However, not all aspects are tracked in the audit trail.

* Item structure component attributes referenced from Product Information Management (PIM) are not included in the audit trail. PIM attributes are managed separately from manufacturing-specific data, and changes to these components are not captured in the standard operations audit trail.

Audited components typically include:

- * Work definition header and version attributes
- * Descriptive flexfields (DFFs) at any level
- * Attachments at any level
- * Operation resources, including alternate resources

Oracle Manufacturing Cloud 's documentation on audit trails details the entities that can be tracked, and PIM attributes are not part of the work definitions audit scope.

質問 # 15

Which three actions can a supervisor perform to annul or correct mistakes in a completed work order, committed by a user while entering work order details?

- A. Reverse at an operation.
- B. Reverse from Scrap to Ready.
- C. Correct the Product entered at work order.
- D. Reverse a Closed order to Open.
- E. Reverse the product at the last operation.

正解: A、B、E

解説:

If a mistake is made in a completed work order , supervisors have the ability to perform certain corrective actions to reverse transactions or correct errors:

* Reverse from Scrap to Ready (C) : This action allows the supervisor to reverse a product that was incorrectly marked as scrap back to a ready state, making it available for further operations.

* Reverse at an operation (D) : If the mistake occurred during a specific operation, the supervisor can reverse the transaction at that operation and correct the mistake.

* Reverse the product at the last operation (E) : The supervisor can reverse a transaction at the last operation to make corrections to the final product before closing the work order.

Incorrect options:

* A (Reverse a Closed order to Open) : Once a work order is closed, it cannot be reopened. Reversing transactions must happen before the order is officially closed.

* B (Correct the Product entered at work order) : The product specified in a work order cannot be changed once the order has been processed and completed.

Oracle Cloud documentation on Work Order Reversal Transactions explains the capabilities for reversing scrap, operation, and product entries to correct errors in work orders.

質問 # 16

During a Manufacturing Cloud implementation, a Production Supervisor wants to close the work orders for the previous month and make sure that they include the correct cost.

What must they do to achieve this?

- A. Update work order costs at any time; they can be updated regardless of the status of the work order
- B. Exclude cost variances while closing last month ' s work orders because those can be applied directly In Subledger Accounting.
- C. Include all costs and variances in last month ' s work orders and close them; however, the work orders where updates are expected must not be closed.
- D. Make sure that all costs are Included while closing last month ' s work orders; however, variances can be Included after closing the work orders.

正解: C

解説:

To ensure that work orders for the previous month are closed with the correct costs, the Production Supervisor must:

* Include all costs and variances in the work orders before closing them. This ensures that the work orders reflect the true cost of production, including any deviations from the expected costs. However, if there are work orders that are still in progress or expected to receive updates (such as material or labor transactions), those work orders should not be closed until all costs are finalized.

Incorrect options:

* A : Excluding cost variances would result in inaccurate costing.

* B : All costs, including variances, must be included before closing.

* D : Costs cannot be updated after the work order is closed, so all updates must occur before closing the work order.

Oracle Cloud 's Work Order Management documentation provides details on closing work orders and ensuring that costs, including variances, are accounted for correctly.
