Symantec Data Loss Prevention 16.x Administration Technical Specialist Sample Questions (Q137-Q142):

NEW QUESTION # 137

You are responsible for administering the Storage Foundation for Oracle server. You plan to clone a database using Database

FlashSnap. When you run the `dbed_vmchecksnap` command you get an error "SFORA dbed_vmchecksnap ERROR V-81-5677 Could not find a mandatory, primary and valid archive destination for database PROD." You want to resolve this error. What should you do?

- A. Define the location of the archive logs in the UNC format.
- **B. Set the valid archive destination.**
- C. Change the default archive location.
- D. Empty the full mandatory location and make free space available for the Oracle database.

Answer: B

NEW QUESTION # 138

Which server target uses the 'Automated Incident Remediation Tracking' feature?

- A. Lotus Notes
- B. SharePoint
- **C. File System**
- D. Exchange

Answer: C

NEW QUESTION # 139

A Network Monitor is showing under System Overview as 'Running Selected'. The corresponding detection server events indicate that packet capture and filereader are crashing. What is a possible cause for the Network Monitor being in this state?

- A. the Enforce server and detection server are running different versions
- **B. the minimum required amount of available free space has been used**
- C. the detection server is missing the server side certificate
- D. the license has expired for this detection server

Answer: B

NEW QUESTION # 140

While accessing a node in the Dynamic Multipathing (DMP) database you get an error "VxVM vxdmp NOTICE V-5-0-111 disabled dmpnode dmpnode_device_number".

How will you resolve this error? (Each correct answer presents part of the solution. Select two.)

- **A. Enable the appropriate controllers to allow at least one path under this DMP node.**
- **B. Check the underlying hardware to recover the desired path.**
- C. Replace the hardware because there may be a problem with host-bus adapter.
- D. If possible correct the hardware failures Then, recover the volume using the `vxrecover` command.

Answer: A,B

NEW QUESTION # 141

You're administering a 10GB volume on a test server that regularly receives new builds that replace most or all of its contents. The build currently under test has an issue that is in the process of being resolved, when a critical production issue arises. Within an hour, the test build you're working with will be overwritten by a copy of the production build, and your working volume under test will be overwritten by a copy of the production build, for its problem resolution. Given that you don't have time to synchronize a snapshot of your test build before it gets overwritten, what technique can you use to get a snapshot of the test volume ready to preserve the state of your test before testing gets set back a week by being overwritten by the production copy?

- A. Use the `vxsnap make` command with the `cache=lg` option.
- B. Use the `vxsnap make` command with the `plex` option to convert an existing plex of the test volume into a snapshot.
- **C. Use `vxassist` to create an empty volume matching the size of the test volume, then use `vxsnap make` with the `snapvol` option and the `sync=off` option to attach the new volume to the test volume as a snapshot.**

- D. Use vxsnap admirr to create a snapshot mirror on the test volume, then use vxsnap make with the nmirror=1 option to convert the mirror into a snapshot volume.

Answer: C

NEW QUESTION # 142

.....
