XSOAR-Engineer Deutsche & XSOAR-Engineer Prüfungsvorbereitung

Möchten Sie wissen , woher unsere Konfidenz für Palo Alto Networks XSOAR-Engineer kommt? Lassen Sie mich erzählen. Zuerst, ZertSoft besitzt eine sehr erfahrene Gruppe, die Prüfungssoftware entwickelt. Zweitens, zahllose Kunden haben nach dem Benutzen unserer Produkte die Palo Alto Networks XSOAR-Engineer Prüfung bestanden. Die Zertifizierung der Palo Alto Networks XSOAR-Engineer wird weltweit anerkannt. Möchten Sie diese Zertifizierung besitzen? Mit Hilfe unserer Palo Alto Networks XSOAR-Engineer Prüfungssoftware können Sie auch unbelastet erwerben!

Palo Alto Networks XSOAR Engineer XSOAR-Engineer Prüfungsfragen mit Lösungen (Q83-Q88):

83. Frage

In a Dev/Prod deployment model, what is available only in the development tenant?.

- A. Marketplace.
- **B. "Export all custom content" feature.**
- C. Custom integration instances.
- D. Content Repository page.

Antwort: B

Begründung:

In Cortex XSOAR's documented Dev/Prod deployment model, the development tenant is designed to be the workspace where engineers create, modify, test, and validate content before promoting it into production. As part of this workflow, the development tenant includes the "Export all custom content" feature, which generates a structured content bundle containing custom playbooks, integrations, fields, layouts, lists, and other artifacts. This bundle is then imported into the production tenant to ensure controlled, versioned, and tested promotion of content.

The Admin Guide highlights that this export capability is restricted to the development environment to preserve the integrity and stability of the production tenant. Production systems are intentionally limited, allowing only the import (not export) of custom content to prevent accidental overwriting, drift, or unintended modifications.

Marketplace access (A) exists in both tenants. Custom integration instances (C) can be created in either tenant. The Content Repository page (B) is also available across both environments.

Therefore, the only feature exclusive to the development tenant is D: "Export all custom content." This ensures a safe, repeatable Dev/Prod promotion model aligned with enterprise change-control requirements.

84. Frage

Management would like to get an incident report automatically following an incident's closure. How would this be accomplished?

- A. Define a task in a playbook to generate an incident report before the closure occurs
- **B. Configure post-processing using a script**
- C. Create an 'Incident Report' from the Reports page
- D. Manually create an 'Incident Report'

Antwort: B

85. Frage

Match the appropriate action to the layout type.

Answer Area

War Room	Drag answer here	View inputs and outputs of a playbook
Work Plan	Drag answer here	Execute a command
Incident Info	Drag answer here	View Incidents 'Similarity Scale'
Related Incidents	Drag answer here	Change incident fields

Antwort:

86. Frage

A playbook task generates a report as HTML in the context data.

An engineer creates a custom indicator field of type "HTML" and adds the field to a section in a custom indicator layout. How can the engineer populate the HTML field in the indicator layout?

- A. Create a custom Indicator Mapper and populate the custom indicator field.
- B. Add HTML to a list using !setList and use it as an HTML template to populate the custom indicator field.
- C. Populate the custom indicator field with the built-in !SetIndicator command.
- **D. Use the Mapping option in the playbook task that generates the HTML report to populate the custom indicator field.**

Antwort: D
